INTRODUCTION

Microlog: Canadian Research Index puts all of Canada's hard-to-find government and research literature at your fingertips. This monthly indexing, abstracting and document delivery service covers all levels of government in Canada, as well as institutions receiving research grants. Most titles included in **Microlog** are available in either paper or microfiche format. Combined with a microfiche collection, the **Microlog Service** is a powerful tool for finding Canadian report publications. The unique **Microlog Accession Number** is the key to immediate retrieval of any document.

SCOPE

Among other documents, **Microlog** includes research papers in physical, natural and social sciences, policy papers, important statistics, and annual reports. Every effort is made to ensure the currency of the index. For instance, documents appearing in the Checklist of Canadian Government Publications are delivered by **Microlog** approximately two months after publication of the list.

LANGUAGE POLICY

Documents issued in English or French are indexed and abstracted in the language of publication, while bilingual documents are indexed and abstracted in both languages.

SOURCES AND COVERAGE

Federal Documents: The **Microlog** editors review all checklists issued by the Canadian Government Publishing Centre and order every document relevant to the service. Except for serials, maps, pamphlets, and manuals, all monographs covered by the Federal Depository Plan are included in the index. Also, a special effort is made to track down elusive but important titles which do not appear in the lists.

Microlog offers a special collection of documents published by the Federal Government but not issued through the Federal Depository Plan. These titles, available to subscribers as the Non-Depository Publications collection, are indicated in the Titles section by a bullet (●). **Microlog** is also the direct distributing agent for many government bodies.

Provincial Documents: Depository arrangements with several provincial libraries have been established to ensure that **Microlog** subscribers receive all publications from those provinces. Where no depository arrangement exists, all publications lists issued by the province are reviewed for acquisitions.

Municipal Documents: Since these titles are very difficult to obtain, the **Microlog** editors make special efforts to include publications from municipal sources.

ACCESS

The Index provides access by subject, corporate or individual author, and series title.

The full **Microlog** file from 1979 to date, consisting of almost 50,000 records, is available online through Can/OLE. This is an ideal way to locate hard-to-find reports which may then be ordered directly online through the Can/DOCS service. Contact: Can/OLE Client Services, CISTI, Ottawa, Ontario, K1A 0S2.

FEATURES

Microlog comprises the following sections:

1. **Titles and abstracts:** A full bibliographic citation and a descriptive abstract for each title.
2. **Name Index:** Access by personal author, corporate author, and conference name.
3. **Series Titles:** Lists by title and number all reports in series in the service; series are available as an ongoing subscription or retrospective collection.
4. **Subject Index:** Descriptors based on Library of Congress and Canadiana Subject Headings are assigned to each document. A cross-referencing structure assists searchers.
5. **Microfiche collections:** Lists contents of each fiche collection for quick reference. These collections can be used as current awareness lists in broad subject areas to notify users of new acquisitions. This section is included in the annual cumulation as a separate fiched product.

MICROLOG AND CANADIAN STATISTICS INDEX

Statistical Material: The **Canadian Statistics Index** (CSI) provides further access to statistical material contained in **Microlog** monographs and special or annual reports. The CSI identification number has been included with the **Microlog** citation for the convenience of subscribers to the CSI fiche collection.

Annual Reports: Storage of annual reports in a single sequence has been a problem for clients in the past. The CSI numbers for annual reports are now listed in the bibliographic citation and appear on the microfiche header of each report, to make such sequencing possible.

DOCUMENT DELIVERY

Institutions may subscribe to complete or partial collections of the documents in **Microlog**. Individual copies on microfiche or paper reprint may be ordered through Micromedia's Document Delivery Service. To order, please contact:

INTRODUCTION

Microlog: Index de recherche du Canada met à votre disposition toutes les publications du gouvernement et les travaux de recherche difficiles à se procurer. Combiné aux collections sur microfiches, le service **Microlog** constitue un outil très efficace pour retrouver les publications des différents gouvernements du Canada, ainsi que celles des organismes qui reçoivent des subventions pour la recherche. **Microlog** est aussi un service de livraison de documents, sur microfiches ou sous forme imprimée.

CONTENU

Microlog contient entre autres des recherches en sciences physiques, naturelles et sociales, des énoncés de politique, des statistiques et des rapports annuels. Par l'intermédiaire du service **Microlog**, on peut obtenir les documents qui figurent sur la Liste des publications du gouvernement du Canada environ deux mois après leur parution sur cette liste.

POLITIQUE LINGUISTIQUE

Les ouvrages publiés en français ou en anglais sont indexés et résumés dans la langue de publication; les ouvrages bilingues sont traités dans les deux langues.

SOURCES

Publications fédérales: Les rédacteurs de **Microlog** examinent les listes émises par le Centre d'édition du gouvernement du Canada et commandent les documents pertinents. En dehors des publications en série, cartes, brochures et manuels, toutes les monographies régies par le Programme de dépôt du gouvernement fédéral figurent dans l'index, ainsi que des ouvrages importants ne figurant pas sur les listes.

Microlog propose aussi une collection spéciale de publications fédérales non déposées, identifiées par un point (●) dans la section Titres et résumés. **Microlog** est aussi l'agent de diffusion de nombreux organismes gouvernementaux.

Publications provinciales: Des ententes de dépôt ont été conclues avec plusieurs bibliothèques provinciales pour que les abonnés de **Microlog** reçoivent toutes les publications de ces provinces. Lorsqu'aucune entente n'existe, les listes de publications émises par les provinces sont examinées afin d'acquiescer les documents.

Publications municipales: Ces ouvrages étant difficiles à se procurer, les rédacteurs de **Microlog** redoublent d'ardeur pour les inclure dans l'index.

ACCÈS

L'index imprimé est bilingue et les publications sont répertoriées par sujet, par auteur (collectivité et personne physique) et par titre de collection.

Le fichier complet de **Microlog**, de 1979 à aujourd'hui, contient près de 50,000 notices et est accessible sur

Can/OLE. Il s'agit d'un moyen idéal pour mettre la main sur des rapports difficiles à trouver qu'on peut commander par l'intermédiaire du service Can/DOCS. À ce propos, veuillez vous adresser au Service à la clientèle Can/OLE, ICIST, Ottawa (Ontario), K1A 0S2.

ORGANISATION DE L'INDEX

Microlog est divisé en cinq sections:

1. **Titres et résumés:** tous les titres sont catalogués et accompagnés d'un résumé descriptif.
2. **Index des noms:** donne un accès par auteur, collectivité-auteur et titre de conférence.
3. **Titres de collections:** tous les rapports publiés en série sont classés par titre et numéro. Ces collections peuvent être commandées individuellement.
4. **Index des matières:** les descripteurs permettent de trouver facilement les publications pertinentes; un réseau de renvois facilite la recherche.
5. **Collections de microfiches:** chaque collection apparaît dans une section séparée pour faciliter la recherche. Ces listes peuvent aussi servir à renseigner les usagers sur les nouveautés. Dans la refonte, cette section est insérée sous forme de microfiches.

MICROLOG ET L'INDEX DES STATISTIQUES DU CANADA

Données statistiques: L'Index des statistiques du Canada (CSI) constitue une autre source de référence sur les statistiques contenues dans certaines publications indexées dans **Microlog**. Celles-ci ont un numéro d'ordre spécial qui est inclus dans la référence bibliographique.

Rapports annuels: Afin de rendre le classement des rapports annuels plus facile, le numéro d'ordre CSI correspondant à ces documents figure maintenant dans les références bibliographiques et est inscrit sur les en-têtes de microfiches.

LIVRAISON DE DOCUMENTS

On peut s'abonner à l'ensemble ou à certaines des collections de documents de **Microlog**. On peut également commander des reproductions de documents sur microfiches ou sur papier par l'intermédiaire du service de livraison de documents de Micromedia. Pour commander, communiquer avec:

FICHE COLLECTIONS

Documents from MICROLOG are available on microfiche through various subscription plans ranging from the complete collection to subsets by level of government (jurisdiction), geographic area or subject. Listed below are all the collections available with a short explanation for each one.

JURISDICTION COLLECTIONS

- CA FEDERAL:** titles issued by Supply and Services Canada, or any other governmental body, about Canada or federal matters, both depository and non-depository.
- PR PROVINCIAL:** titles issued by provincial governments.
- MU LOCAL/MUNICIPAL:** titles issued by local governments, or about local jurisdictional concerns, or about specific cities or towns.

GEOGRAPHIC COLLECTIONS

Documents included in the geographic collections are published at the provincial level or cover a province.

- AL ALBERTA**
- AP ATLANTIC PROVINCES:** Newfoundland, Nova Scotia, New Brunswick, and PEI.
- BC BRITISH COLUMBIA**
- MS MANITOBA - SASKATCHEWAN**
- NO NORTHERN REGIONS:** Northwest Territories, Yukon, Arctic Regions, Native Peoples, North of 60.
- ON ONTARIO**
- QU QUEBEC**

SUBJECT COLLECTIONS

- AG AGRICULTURE:** all aspects of agriculture, food and beverage industries; soil sciences; water in agriculture; fur industry; hunting; animal industry; crops and climate; horticulture; wine making.
- BS BEHAVIOURAL SCIENCES:** human behaviour; alcoholism and drug abuse; child abuse; suicide; psychology; public opinion and survey methods.
- CO COMMERCE AND ECONOMICS:** business and finance; consumer affairs; free trade; marketing; tourism; insurance; pension fund administration; taxation; assessment; budget papers for Canada and provinces.
- CU CULTURE, RECREATION AND HUMANITIES:** arts; theatre; sports; lotteries; archaeology; history and historic sites; recreational hunting and fishing; parks; tourism related to recreation; libraries.
- ED EDUCATION:** curriculum; educational research; school and university funding; learning; teacher collective bargaining and pension funds; community and school.
- EN ENERGY:** resources, supply and demand; generation; storage; transmission; regulation; conservation; exploration; alternative resources; insulation.
- EV ENVIRONMENT:** pollution; environmental policy; assessment reports; natural areas and park management; environmental accidents; hazardous wastes; wildlife resources; environmental health.
- EX EXTERNAL AFFAIRS:** international relations; defence; aid to developing countries; international trade; free trade; immigration policy; arms control; wars and warfare.

- FI FISHERIES:** commercial fishing; fish resources; fish biology; aquatic resources; fish habitat; aquaculture; aquatic ecology; fish trade; law of the sea related to fisheries; fishing boat accidents.

- FO FORESTRY:** forest ecology; logging; forest products; wood trade; forest fires; reforestation; wood crops for energy; pulp and paper industry.
- HE HEALTH AND MEDICAL CARE:** public health and health services; health insurance; nutrition; vital statistics; medical ethics; diseases and hygiene; environmental health; disease aspects of occupational health.
- JU JUSTICE AND LAW:** crime; corrections; ombudsman; coroner; human rights; police activities; firearms; law reform.
- LA LABOUR:** employment; manpower; occupational health and safety; collective bargaining; vocational training and retraining; wages; compensation; strikes.
- LS LIFE SCIENCES:** biology; botany; zoology; genetics; biotechnology; medical sciences.
- NP NATIVE PEOPLES:** any material related to issues involving Canada's Native peoples.
- NR NATURAL RESOURCES, EARTH SCIENCES AND MINING:** land, water and mineral resources; land reclamation; flood control; hydrology; oceanography; mining; geology; economic geology; mining techniques; metallurgy.
- PS PHYSICAL SCIENCES:** practical sciences and technology; mathematics; physics; computer sciences; chemistry; meteorology; hydrology; geophysics; oceanography; nuclear science; metallurgy; earth sciences; engineering; astronomy; robotics; telecommunications.
- PL PLANNING, HOUSING AND CONSTRUCTION INDUSTRY:** planning policy and regulation; building technology; housing rehabilitation; availability; land use planning; architecture.
- PA PUBLIC ADMINISTRATION:** politics, government and administration; government operations; intergovernmental relations; public finance, budgets, estimates; parliamentary process; elections; ombudsman; taxation; annual reports of municipalities; privatisation.
- PW PUBLIC WORKS:** government management of infrastructures; public utilities; waste management; fire control; emergency services; Crown land management.
- SA SOCIAL AFFAIRS:** social problems; social services; alcohol and drug problems; housing and public housing; adoption; wife abuse; families; women; Native peoples; minorities; handicapped; public welfare; unemployment; demography; veterans affairs; aged.
- SC SCIENCE & TECHNOLOGY:** agriculture; behavioural sciences; energy; environment; fisheries; forestry; life sciences; natural resources; physical sciences; planning; telecommunications; transportation.
- ST STATISTICS:** all material from Microlog that is included in the Canadian Statistics Index.
- TE TELECOMMUNICATIONS:** communications and broadcasting policy, regulation, technology; information systems; data base management; publishing; courriers and postal service; telephones; telex; communications satellites.
- TR TRANSPORTATION:** all modes of transportation; traffic planning and engineering; vehicles; transportation fuels and fuel conservation; roads and highways; pipelines.

SPECIAL COLLECTIONS

- CI CRITICAL ISSUES:** newsworthy topics such as abortion, the environment, defence, and free trade.
- CF FISHERIES & OCEANS CANADA:** documents published by the Department of Fisheries and Oceans.
- CM CANADA CENTRE FOR MINERAL & ENERGY TECHNOLOGY (CANMET)**
- **NON-DEPOSITORY COLLECTIONS:** a bullet in the Abstracts Section indicates a document published by the federal government, but not issued through the Federal Depository Plan.

COLLECTIONS DE MICROFICHES

Les publications incluses dans MICROLOG sont en vente sur microfiches, en collection complète ou en collections plus petites regroupant des titres par juridiction, par aire géographique ou par matière.

COLLECTIONS GOUVERNEMENTALES

- CA FÉDÉRAL:** publications émises par le ministère des Approvisionnements et Services ou une agence fédérale, régies ou non par le Programme de dépôt.
- PR PROVINCIAL:** publications des gouvernements provinciaux.
- MU LOCAL/MUNICIPAL:** publications émises par les gouvernements locaux et municipaux, ou concernant une juridiction locale ou municipale.

COLLECTIONS GÉOGRAPHIQUES

Les publications incluses dans ces collections sont publiées au niveau provincial ou concerne une province.

- AL ALBERTA**
- AP PROVINCES ATLANTIQUES:** Terre-Neuve, Nouvelle-Écosse, Nouveau-Brunswick, Île-du-Prince-Édouard.
- BC COLOMBIE-BRITANNIQUE**
- MS MANITOBA et SASKATCHEWAN**
- NO RÉGIONS DU NORD:** Territoires du Nord-Ouest, Yukon, régions arctiques, peuples autochtones, nord du 60e.
- ON ONTARIO**
- QU QUÉBEC**

COLLECTIONS PAR MATIÈRE

- AG AGRICULTURE:** tous les aspects de l'agriculture; industries des breuvages et de l'alimentation; études des sols; eau en agriculture; industrie de la fourrure; bétail; cultures et climat; horticulture; viticulture.
- BS SCIENCE DU COMPORTEMENT:** comportement humain, alcoolisme et toxicomanie; enfance maltraitée; suicide; psychologie; criminologie; opinion publique et sondage.
- CO COMMERCE ET ÉCONOMIE:** affaires et finances; consommation; libre-échange; marketing; tourisme; assurance; caisses de retraite; taxe et évaluation foncière; budgets fédéral et provinciaux.
- CU CULTURE, LOISIRS ET SCIENCES HUMAINES:** arts; théâtre; sports; loteries; archéologie; histoire; sites historiques; chasse et pêche sportive; parcs; tourisme (aspect récréatif); linguistique; bibliothèques.
- ED ÉDUCATION:** guide pédagogique; financement des écoles et des universités; apprentissage; conventions collectives et caisses de retraite des enseignants.
- EN ÉNERGIE:** offre et demande; production; emmagasinage; transmission; réglementation; conservation; exploration; énergies douces; isolation.
- EV ENVIRONNEMENT:** pollution; politique de l'environnement; études d'impact; zones de conservation et gestion des parcs; accidents écologiques; déchets dangereux; faune; santé et environnement.
- EX AFFAIRES EXTÉRIEURES:** relations internationales; défense; aide étrangère; commerce international (libre-échange); immigration; guerre et armements.
- FI PÊCHE:** pêche commerciale; ressources halieutiques et aquatiques; biologie du poisson; aquiculture; écologie marine; loi de la mer.
- FO FORÊTS ET SYLVICULTURE:** écologie et exploitation forestière; produits de la forêt; incendies de forêts; reboisement; utilisation du bois comme énergie; pâtes et papier.

- HE SANTÉ ET MÉDECINE:** santé publique et services de santé; assurance-maladie; nutrition; statistique médicale; déontologie médicale; maladies et hygiène; santé et environnement; santé au travail (aspect pathologique).
- JU JUSTICE ET DROIT:** criminalité; services correctionnels; protecteur du citoyen; coroner; droits de la personne; activités policières; armes à feu; réforme du droit.
- LA TRAVAIL:** emploi, main d'œuvre; santé et sécurité au travail; conventions collectives; formation et recyclage professionnel; salaires; accidents du travail; grèves.
- LS BIOLOGIE:** botanique; zoologie; génétique; biotechnologie; médecine.
- NP POPULATIONS AUTOCHTONES:** publications ayant trait aux peuples autochtones canadiens.
- NR RESSOURCES NATURELLES:** ressources du sol, aquatiques et minérales; améliorations foncières; contrôle des crues; hydrologie; océanographie; mines; géologie; techniques minières; métallurgie.
- PS SCIENCES PHYSIQUES:** sciences appliquées et technologie; mathématiques; physique; informatique; chimie; météorologie; hydrologie; géophysique; océanographie; sciences nucléaires; métallurgie; géologie; génie; astronomie; télécommunications.
- PL PLANIFICATION, LOGEMENT ET INDUSTRIE DE LA CONSTRUCTION:** planification, urbanisme et zonage; construction; bâtiment; rénovation domiciliaire; utilisation du sol; architecture.
- PA ADMINISTRATION PUBLIQUE:** politique et gouvernement; opérations gouvernementales; relations inter-gouvernementales; finances publiques et budget; processus parlementaire; élections; protecteur du citoyen; impôt; rapports annuels municipaux; privatisation.
- PW TRAVAUX PUBLICS:** gestion des infrastructures; services publics; élimination des déchets; protection contre l'incendie; services d'urgence; terres de la Couronne.
- SA AFFAIRES SOCIALES:** problèmes sociaux; services sociaux; alcoolisme et toxicomanie; logement public; adoption; femmes battues; familles; autochtones; minorités; handicapés; bien-être social; chômage; démographie; anciens combattants; personnes âgées.
- SC SCIENCE ET TECHNOLOGIE:** agriculture; science du comportement; énergie; environnement; pêche; sylviculture; biologie; ressources naturelles; sciences physiques; planification; télécommunications; transport.
- ST STATISTIQUES:** publications comprises dans Microlog et aussi incorporées à l'Index des statistiques du Canada.
- TE TÉLÉCOMMUNICATIONS:** communications et politiques de radiodiffusion; systèmes d'information; bases de données; édition; service postal et messagerie; téléphones; télex; satellites de communication.
- TR TRANSPORT:** tous les moyens de transport; gestion et génie du transport; véhicules; carburants; système routier; oléoducs et gazoducs; aspect de l'environnement du transport;

COLLECTIONS PARTICULIÈRES

- CI SUJETS D'ACTUALITÉ:** sujets de l'heure comme l'avortement, l'environnement, la défense et le libre-échange.
- CF PÊCHES ET OCÉANS CANADA**
- CM CENTRE CANADIEN DE LA TECHNOLOGIE DES MINÉRAUX ET DE L'ÉNERGIE**
- **COLLECTIONS NON DÉPOSÉES:** un point dans la section Résumés indique une publication émise par le gouvernement fédéral, mais non régie par le programme de dépôt.

Sample Microlog Search

*“How can a person from a foreign country
qualify for refugee status in Canada?”*

The researcher can search in Microlog as in any library catalogue – by subject, author and title.
Because the index is bilingual, searching can be done in English or in French.

Recherche type avec Microlog

*“Comment une personne d’un pays étranger
peut-elle demander le statut de réfugié au Canada?”*

La méthode de recherche dans Microlog est la même que dans une bibliothèque, puisque les documents sont indexés par auteur, par sujet et par titre. L’index étant bilingue, la consultation peut se faire en français ou en anglais.

The Convention refugee determination process in Canada

by M. Young. Ottawa Library of Parliament.
Research Branch. 1987 13 p. Bibliogr
(Current issues review 86-26E)
French ed (La reconnaissance au Canada)
on the same fiche
ISBN 0-660-12567-6
MICROLOG 88-00800 1 fiche

The increase of refugee status claiming immigrants in Canada has led to a review of the immigration policy concerning this group. This report looks at the weaknesses of current legislation which is linked to the Geneva Convention and its Protocol, studying Canada's past adherence to the rights afforded under its protection. Also discusses public and government opinion on support for a humanitarian and generous refugee policy and questions of balancing efficiency with procedural fairness to claimants. Gives a chronology of events since 1969.

La Reconnaissance au Canada du statut de réfugié au sens de la Convention

par M. Young. Ottawa Bibliothèque du
Parlement Service de recherche. 1987
14 p. Bibliogr (Bulletin d'actualité 86-26F)
L'éd. anglaise (The Convention refugee) sur
la même fiche
ISBN 0-660-92124-3
MICROLOG 88-00800 1 fiche

Le processus de reconnaissance du statut de réfugié au sens de la Convention de Genève, tel qu'il est énoncé dans la Loi sur l'immigration, sert à déterminer si les personnes qui revendiquent ce statut y ont effectivement droit et peuvent bénéficier de la protection accordée aux réfugiés au sens de la Convention. Ce processus s'est avéré inadéquat, tant au point de vue juridique que pratique. Dans ce bulletin, on examine les mécanismes en vigueur actuellement et le projet de réforme contenu dans la loi C-55 déposé en mai 1987.

STEP 2/DEUXIÈME ÉTAPE

A unified search strategy

The search strategy should include all the monthly issues. Start with the most recent issue and work back. Monthly issues are cumulated annually.

Établir une stratégie de recherche unifiée

La stratégie de recherche doit tenir compte de toutes les publications mensuelles, à commencer par les plus récentes. Chaque année, ces publications font l'objet d'une refonte.

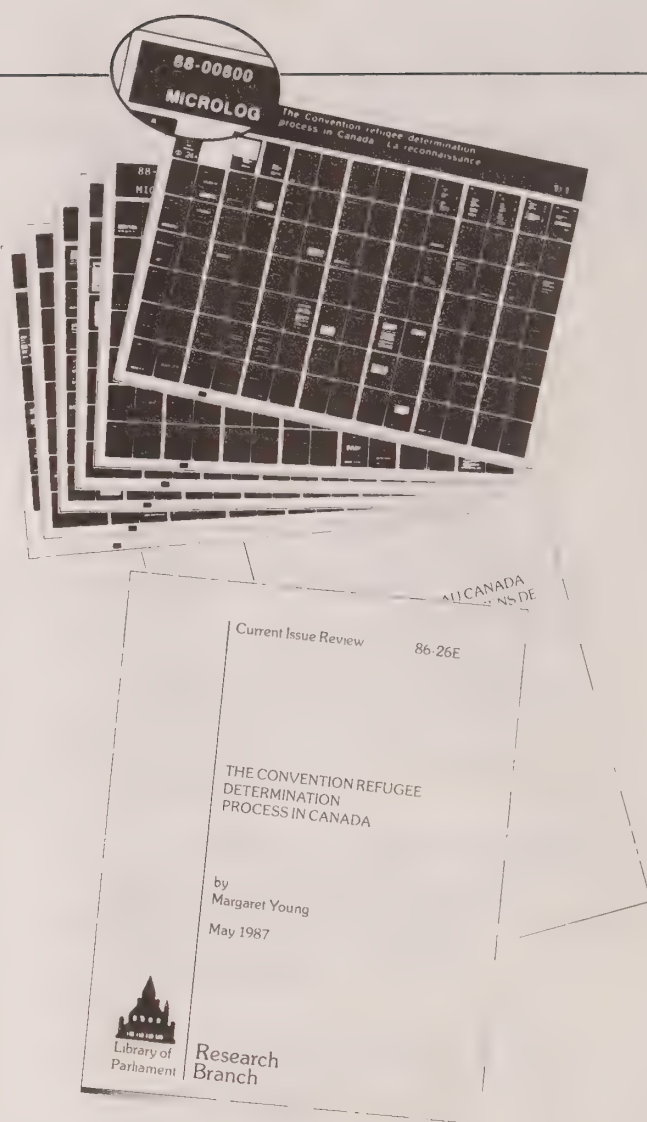

STEP 3/TROISIÈME ÉTAPE

Retrieve the publication

Each bibliographic citation gives a full description of the relevant document. Locate the document by the microfiche number in the library's collection or order from Micromedia. Individual publications are available for purchase on microfiche or paper. The bibliographic description provides publisher source information.

Repérer la publication

Chaque notice bibliographique comprend une description complète du document; celui-ci peut être repéré grâce au numéro de microfiche de la bibliothèque; sinon, il faut le commander à Micromedia. On peut se procurer les monographies sur microfiches ou sur papier. La description bibliographique comporte également des indications sur l'éditeur.

The 1978, 1980, 1982 and 1984 returns of even year pink salmon stocks to the Johnstone Strait study area

by A.P. Gould, A.P. Stefanson and L.H. Wo. Nanaimo, B.C. : Dept. of Fisheries and Oceans, Fisheries Branch, South Coast Division, 1988. viii, 53 p. : ill. Bibliogr. (Canadian technical report of fisheries and aquatic sciences ; no. 1629) ISSN 0706-6457
MICROLOG 89-01072 1 fiche

The even year pink salmon stocks in the Johnstone Strait Study Area are analyzed and reported bi-annually since 1962. This report is one of a series which combines and condenses the catch and escapement information, and the management consideration for the study area for the 1978, 1980, 1982, and 1984 seasons. Also included is a review of the study area sockeye stocks and the Fraser River sockeye catches in Johnstone Straits.

1980 Lake Winnipeg fish stock assessment program

by W. Lysack. Winnipeg : Dept. of Natural Resources, Fisheries Branch, 1981. viii, 67 p. : ill. Bibliogr. (Manuscript report ; no. 81-20)
MICROLOG 89-00730 1 fiche

Results of the 1980 Lake Winnipeg fish stock assessment program, initiated in response to a need for a standardized stock monitoring program so that year-to-year comparisons of population dynamics would be valid. The study estimated mortality rates; described maturity and growth regimes; compared mean biomasses of fish species caught in various meshes in the north basin, channel and south basin; determined age compositions, mean ages and mortality rates of commercially caught walleyes, saugers and whitefish; and related population characteristics to commercial fishing activities in the north basin, channel and south basin. The study was restricted to the ice-free season, with only 1-2 gangs of gillnets set once at each sampling site.

1986 site preparation equipment trials in Alberta : Donaren 180D powered disk trencher Sinkkila HMF scarifier

by D.A. Gibbard and B.J. Sutherland. S.I. : Canada-Alberta Forest Resource Development Agreement, 1987. iii, 42 p. : ill. Bibliogr. ISBN 0-662-15582-3
MICROLOG 89-01399 1 fiche

The Donaren 180D powered disk trencher was first tested in Alberta in 1983 and found wanting. The Sinkkila is a Finnish spot scarifier used in Finland for the last 20 years. It was investigated in Alberta as a site preparation tool on clay soil where raised or mounded microsites may offer advantages for the survival and growth of spruce planting stock. Trials were held to determine if the Donaren & Sinkkila could create plantable spots and expose mineral soil on a range of full-tree logged sites. Portions of 3 sites were used to evaluate the effectiveness of the implements using the Great Lakes Forestry Centre's Standard Assessment Procedures, adopted to facilitate the collection of data using standard accepted methodology allowing comparison between sites and with other equipment trials conducted across Canada.

Abortion : legal aspects -- Rev.

by M. Hébert. Ottawa : Library of Parliament, Research Branch, 1988. 20 p. Bibliogr. (Current issue review : 80-9E) *French ed (L'avortement : aspects juridiques) on the same fiche*. ISBN 0-660-13168-4
MICROLOG 89-05444 1 fiche

Under revisions to the abortion law in 1969, Parliament had hoped to resolve the issue of abortion by specifying the circumstances in which therapeutic abortions could legally be carried out. In a judgement rendered on 28 January 1988, however, the Supreme Court struck down the relevant provisions of the Criminal Code, thus decriminalizing the procurement of abortions. In order to place this decision into context, this paper outlines the abortion law as it existed before and after the reform of 1969, and highlights some of the reasons for which the legislation was ruled unconstitutional by the Supreme Court.

Abrasion-erosion resistance of various repairing mortars

by J. Mirza. S. Turenne and J. Masounave. Boucherville, Que. : National Research Council Canada, Industrial Materials Research Institute, 1989. 25 p. : ill. Bibliogr.
MICROLOG 89-00593 1 fiche (Available on fiche only)

The degradation of concrete hydraulic structure is a slow process influenced mainly by erosion, a prevalent problem of great concern to electrical utilities. This report presents the results of a study to determine the factors influencing the abrasion-erosion resistance of some mortars. The erosion test described forms part of a larger investigation to evaluate the efficiency of different mortars as repairing materials. The results reported here give only an indication of wear due to erosion based on the test data.

Abundance, age, size, sex and coded wire tag recoveries for chinook salmon escapements of Atnarko River, 1984-1986

by J.H. Andrew, G.D. Sutherland and T.M. Webb. Vancouver, B.C. : Dept. of Fisheries and Oceans, Fisheries Branch, 1988. viii, 87 p. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences : no. 2014) ISSN 0706-6473
MICROLOG 89-06189 1 fiche

Report describing chinook salmon escapement estimation programs on the Atnarko River on the central coast of British Columbia from 1984-86. Escapement was estimated by an extended Jolly-Seber method using tagged carcasses and the Petersen method using live tagging. These estimates were compared to the results of other methods, including expanded fisheries officer counts, broodstock catch per gillnet set and tower counts.

Abundance, age, size, sex and coded wire tag recoveries for chinook salmon escapements of Campbell and Quinsam Rivers, 1985

by J.H. Andrew, M. Lightly and T.M. Webb. Vancouver, B.C. : Dept. of Fisheries and Oceans, Fisheries Branch, 1988. vii, 46 p. : ill. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences : no. 2007) ISSN 0706-6473
MICROLOG 89-04351 1 fiche

The chinook salmon of the Campbell/Quinsam river system were selected as one of the indicator stocks for assessing the response of Pacific chinook salmon stocks to a new harvest management regime. This report presents the results of the second year (1985) of intense escapement monitoring and sampling. The 1985 escapement was calculated by the adjusted Petersen method by tagging carcasses to produce separate estimates for sexes and rivers, and summing these to form a total estimate. Potential biases in the Petersen method, carcass tagging method, and method of stratification are discussed, and assumptions for the methods used and the tests for biases caused by violations of assumptions are described. The report presents population estimates, tests for bias in tagging and recovery, population composition (age, length, sex), and the results of coded wire tag studies.

Abundance, age, size, sex and coded wire tag recoveries for chinook salmon escapements of Kitsumkalum River, 1984-1986

by J.H. Andrew and T.M. Webb. Vancouver, B.C. : Dept. of Fisheries and Oceans, Fisheries Branch, 1988. vii, 62 p. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences : no. 2004) ISSN 0706-6473 MICROLOG 89-02375 1 fiche

Chinook salmon, the largest of the Pacific salmon, are highly prized by both sport and commercial fishermen, leading to overfishing and dangerously low stock levels. In an effort to rebuild them, a key streams program was initiated in 1984 to monitor the success of management actions. One of the key streams selected was the Kitsumkalum River, a major tributary of the Skeena River located near Terrace. Each year since 1979, coded wire tagged fry were released. This report reviews the escapement enumeration and CWT programs from 1984-86. The escapement was enumerated by the adjusted Petersen method to produce separate estimates for sexes and geographic stream areas and then summing these to form a total. Potential biases in the Petersen method and the method of stratification are discussed. Results present escapement numbers, tests for bias in tagging and recovery, and the results of coded wire tagging studies.

Access to advanced education and job training in British Columbia : report

British Columbia. Provincial Access Committee. Victoria : Ministry of Advanced Education and Job Training, 1988. viii, 30 p. : ill. CSI 37121.201. MICROLOG 89-00418 1 fiche

Increasing accessibility to advanced education and job training has emerged as a major concern of citizens, educators, and government in British Columbia since 1986. This report of the Committee brings into focus major issues and recommends broad initiatives to improve accessibility to, and student success within, the province's system of advanced education and job training. It also draws attention to proposals for action generated by the Regional Access Committees.

Access to education in a multicultural society

Ottawa : Multiculturalism and Citizenship Canada, 1988. 52, 60 p. Bilingual (*L'accès au système...*). ISBN 0-662-56354-9 MICROLOG 89-02964 2 fiche

This manual is an aid to people in community and ethnocultural groups who want to know how to work with the educational system in their area and make it respond more sensitively to their needs. Based on a series of case studies of community access to education across Canada, this manual outlines a number of successful strategies for influencing educational decision making. The patterns of effective interaction with the educational system

that have emerged from the case studies form the basis of the manual.

L'Accord de libre-échange Canada-Etats-Unis : les grandes questions

par A. Chapman. Ottawa : Bibliothèque du Parlement, Service de recherche, 1988. 14 p. Bibliogr. (Etude générale : BP-182F) L'é.d. anglaise (Canada-U.S. Free...) sur la même fiche. ISBN 0-660-92636-9
MICROLOG 89-05445 1 fiche

Le 2 janvier 1988, le Canada et les Etats-Unis ont signé un accord de libre-échange dont la mise en œuvre s'étendra sur une période de dix ans à compter du 1er janvier 1989. Le présent document traite des grandes questions que soulève cet accord telles que: les règles d'origine, le traitement national, les normes

techniques, l'agriculture, l'énergie, le commerce des produits automobiles, les marchés publics, les services, l'autorisation de séjour temporaire pour les gens d'affaires, l'investissement, les services financiers, le règlement binational des différends en matière de droits antidumping et compensateurs, les industries culturelles, les programmes sociaux, et les exportations d'eau.

An Accurate numerical technique for determining flight test rate gyroscope biases prior to takeoff

by G.M. Beauchamp. Ottawa : National Aeronautical Establishment, 1989. vi, 25 p. : ill. Bibliogr. (Aeronautical note ; NAE-AN-59)

MICROLOG 89-03970 1 fiche (Available on fiche only)

Rate gyroscope biases play an important role in flight tests requiring flight path reconstruction, a method often used in aircraft parameter estimation. The biases can drift with time, be affected by system power up and, ideally, should be calibrated before each flight to maintain optimum performance. This report details a numerical method to determine the biases of high quality flight test rate gyroscopes immediately prior to a flight. The method requires minimal time and no calibration hardware.

Acne : a summary of the occupational health concern

by R. Bertolini. Hamilton, Ont. : Canadian Centre for Occupational Health and Safety, 1989. i, 4 p. ISBN 0-660-13104-8
MICROLOG 89-02863 1 fiche

Occupational acne is an inflammation of the glands that produce oil to lubricate the skin. The inflammation occurs when certain chemicals block the pores of the skin causing accumulation of the oil and formation of a skin protein called keratin. The accumulation of the oily substance and the formation of keratin produce black plugs that mark occupational acne. This document provides information on oil acne, coal-tar acne, chloracne, and prevention.

Adjusting to win

Advisory Council on Adjustment (Canada). Ottawa : The Council, 1989. xi, 171, xliii, 186 p. : ill. Bibliogr. *Bilingual (S'adapter pour gagner...)*. ISBN 0-662-56593-2
MICROLOG 89-03509 5 fiche

The report of the Council comprises four parts. The first part reviews the main features, strengths, and weaknesses of the Canadian economy. Particular reference is made to Canada's relatively successful adjustment to changing economic conditions to the present day. The second part examines the implications of current demographic and technological changes on labour market requirements, and focuses on education and

retraining as the keys to a successful future. Chapters on a strategy for constantly upgrading the skills of the work force and sharing the challenges of adjustment between labour and management form the core of the report. The third part discusses the importance of technological innovation, appropriate taxation, access to financing, removal of interprovincial barriers, and export development efforts as essential elements of successful adjustment to the new trading environment. The fourth part makes recommendations regarding the particular adjustment problems of industries producing and using poultry, dairy, fruits and vegetables, and wheat products, as well as the Canadian wine industry.

Adjustment of economic production sub-annual series to corresponding annual series -- Rev.

by N. Laniel. Ottawa : Statistics Canada, Methodology Branch, Business Survey Methods Division, 1986. 40 p. : ill. Bibliogr. MICROLOG 89-02421 1 fiche

Statistics Canada is conducting a Business Survey Redesign Project, with part of it being the redesign of annual and sub-annual economic production surveys. Since differences in estimates produced exist between the annual and sub-annual survey figures due to different versions of the frame, they must be adjusted. Some methods to solve the problem are reviewed in the context of a production environment. Constrained minimization and other methods are compared using data from the Wholesale Trade Monthly and Annual Surveys.

The Administrative appeals tribunal of Australia

by T.G. Ison. Ottawa : Law Reform Commission of Canada, 1989. 76, 77 p. Bibliogr. (Administrative law series) *Bilingual (Le tribunal d'appel...)*. *At head of title: Study paper.* ISBN 0-662-56348-4
MICROLOG 89-03961 2 fiche

This study paper examines Australia's innovation in administrative law. The purpose of the study is to provide a different perspective focusing more on a description and critique of the Tribunal in operation. The paper is based on a review of the published literature and some unpublished papers; attendances at the Tribunal in Adelaide, Sydney, Melbourne and Canberra, observing proceedings and interviewing Tribunal members; attendances and discussion at four of the departments or agencies whose decisions are subject to appeal to the Tribunal; and discussions with other government officials, academic lawyers, and members of community groups that interact with the Tribunal. The field research in Australia took place in the period August-November 1985.

Aerial spray trials with Disparvirus in Ontario in 1986

by W.J. Kaupp. Sault Ste. Marie, Ont. : Government of Canada, Canadian Forestry Service, Forest Pest Management Institute, 1988. 7 p. Bibliogr. (Information report ; FMP-X-82) ISSN 0833-5540
MICROLOG 89-00021 1 fiche

Naturally occurring virus epizootics cause severe mortality in late instar larvae of gypsy moth and are an important factor in terminating outbreaks. The virus responsible, a nuclear polyhedrosis virus (NPV) is highly species specific. To evaluate NPV as an acceptable biological control agent for gypsy moth in Canada, field trials were conducted on two plots. The plots were aerially sprayed with an aqueous formulation of Disparvirus containing

25% molasses and 60 g/L Orzan LS, while plot 1 received a double application. Applications at 9.4 L/ha were 5 days apart when insects were in the 1st and 2nd instars.

Aerial spraying operations against blackheaded budworm on Vancouver Island, 1973

edited by J.R. Carrow. Victoria : Government of Canada, Canadian Forestry Service, Pacific Forestry Centre, 1984. 68 p. Bibliogr. (Information report ; BC-X-101) ISSN 0830-0453
MICROLOG 89-02970 1 fiche

In June 1973, an aerial spray project was conducted to protect 29,000 acres of hemlock forest on northern Vancouver Island from additional defoliation by an outbreak of blackheaded budworm. Environment Canada provided entomological and technical advice and assessed the effectiveness of the operation, as well as its effects on non-target organisms. The formulation used was 2 oz. fenitrothion in 20 oz. water per acre applied twice at a 4-day interval. This report presents an evaluation of that operation, including details of the spray operation; biological assessments on target and non-target organisms; and recommendations.

Ageing characteristics of dendritic and non-dendritic (stir-cast) Zn-Al alloy (ZA-27)

by H. LeHuy and G. L'Espérance. Ottawa : National Research Council Canada, 1989. 38 p. : ill. Bibliogr.
MICROLOG 89-00537 1 fiche (Available on fiche only)

Among the zinc-aluminium foundry alloys, ZA-27 exhibits attractive physical and mechanical properties combined with good friction and wear resistance, making it a choice alloy for a multitude of end-uses. Some of these applications require increased performance of the alloy at high temperature, particularly its dimensional stability. Recently, non-conventional casting processes, such as stir-casting (or rheocasting) and compocasting were investigated. This report describes the ageing behaviour of the alloy using a material conventionally cast in graphite mould and a material stir cast at 470°C. The dimensional variation of aged alloys was determined by measuring the change in length of cylindrical specimens.

While a relatively low value product, aggregates
are a valuable resource because of the very
large volumes used. Thus, the production and
marketing of aggregates can be a significant
contributor to a region's economy. This report
describes the market for aggregate materials
within New Brunswick and Nova Scotia including
production and consumption information. Among
the topics covered in this report are: quantities
of aggregates produced; value of product; cost
of production, aggregate specifications; survey
of producers, directory of producers; quantities
of aggregates consumed, value and price;
consumer specifications, survey of consumers;
directory of consumers, and aggregate
distribution

**Aggregate resources and surficial
geology of the local government
District of Park North**

by M.A. Mihychuk. Winnipeg : Manitoba Energy
and Mines, Mines Branch, 1988. ii, 37 p. :
ill., maps. Bibliogr. (Aggregate report ;
AR87-2)
MICROLOG 89-00079 1 fiche

An aggregate inventory of the District located
in west central Manitoba along the Manitoba-
Saskatchewan border, was conducted in 1986
to delineate the sand and gravel resources at
a scale of 1:50,000 and to provide an estimate
of the aggregate reserves in the study area.
Data was compiled from existing sources such
as inventory block files, water well records and
a preliminary airphoto interpretation. Field
methods included the examination of man-made
and natural exposures of surficial sediments,
with detailed site investigations at locations of
granular material. Sand and gravel pits were
visited and sampled; undeveloped aggregate
deposits were sampled utilizing backhoe test
pits, roadcut exposures and hand-dug holes
where access was possible.

Agricultural land use in Nova Scotia : a tabulation of the Agricultural Land Use Survey

Halifax : Dept. of Municipal Affairs. Community Planning Division, 1989. 64 p. : ill.
MICROLOG 89-05332 1 fiche

From 1979-85, a ground survey of agricultural land use throughout Nova Scotia was carried out. Individual agricultural fields were classified into one of 27 categories, then mapped at a scale of 1:10,000. Areas of agricultural fields were measured from the maps and the total areas for each land use category for each rural municipality on each map sheet were measured. Land areas in capability classes 2, 3, and 4 were separated out and their acreage measured and aggregated. This report presents these quantitative results. The amount of Class 2, 3, and 4 land in each rural municipality is listed and the relationship to the total municipal land area is calculated. The report also covers the actual agricultural usage of land, whether located on Class 2, 3, and 4 or other capability areas, and compares the extent of agricultural usage with capability by taking ratios of the two acreages.

Agricultural Outlook Conference (1989). Winnipeg : Manitoba Agriculture, 1989. 62 p. : ill.
MICROLOG 89-03330 1 fiche

The Agricultural Outlook Conference began in response to a need by Manitoba producers and agribusiness for information on market trends and price prospects for the coming year from the Manitoba perspective. This publication is a report on the outlook for the Manitoba economy, the farm economy, and livestock, special crops, cereals and oilseed sectors. The material presented is based on the most current information and data available as of December 31, 1988.

Air circulation evaluation

by B. Tilley. Ottawa : Public Works Canada, Architectural and Engineering Services, 1988. vi, 32, vi, 36 p. : ill. Bibliogr. (Building performance evaluation series ; Document D09) *Bilingue (Evaluation de la circulation...)*. MICROLOG 89-01908 1 fiche

Evaluating air circulation is one of the steps required in classifying the condition of a building's interior environment. This document describes methods of assessing air circulation patterns, from preliminary assessments using smoke pencils to in-depth investigation using full imaging infrared systems. Procedures are given for tracing local air flow patterns around workstations as well as large scale circulation patterns in open office areas. Equipment required is listed, and limitations of the techniques are discussed.

Air permeance of building materials

prepared for Jacques Rousseau ; submitted by Air-Ins Inc. Ottawa : Canada Mortgage and Housing Corporation, 1988. 196 p. : ill. Summary report (12 p.) laid in. MICROLOG 89-04270 3 fiche

The first attribute of a simple or composite material being part of the air barrier system for a building envelope is to offer a low air permeance. This study proposes a test method to measure the air permeance of building materials; measures the air permeance of several building materials at various pressure differentials; and classifies the selected building materials using measured air flow rates per unit area. Using the proposed test method, 126 specimens from 36 building materials were tested at static pressure differentials varying from 25-100 Pa.

Air quality survey in the Sarnia area

by R.E. Chapman and G.B. DeBrou. Toronto : Ministry of the Environment, Air Resources Branch, 1988. 37 p. : ill. ISBN 0-7729-4348-6
MICROLOG 89-02237 1 fiche

Two air quality studies were carried out in the greater Sarnia area in July 1986 to determine the ambient air concentrations of a large number of compounds which may be emitted from many industries located in Sarnia - particularly the southern section along Vidal Street. Three mobile air monitoring units were used to maximize the amount of data obtained. Monitored compounds included sulphur dioxide, carbon monoxide, nitrogen dioxide, total reduced sulphur including hydrogen sulphide, ozone, and a large number of organics and chlorinated organics. The second study monitored the emissions from the thermal oxidation incinerator of the Dow Chemical plant, more specifically for polychlorinated biphenyls (PCBs).

Air quality survey in the vicinity of Anachemia Solvents Limited, Mavis Road, Mississauga

by R. Bell. Toronto : Ministry of the Environment, Central Region, 1988. 35 p. ISBN 0-7729-3555-6
MICROLOG 89-00126 1 fiche

Anachemia Solvents Ltd. operates a waste solvent recovery plant in Mississauga, Ontario.

In recent years a considerable amount of new industrial and residential development has taken place in the immediate area, raising concerns about fugitive gaseous emissions from the plant. This report presents the results of an air quality survey which performed monitoring during periods of odour and attempted to identify the compounds causing the odour(s) with special emphasis on the determination of ambient concentrations of aromatics and selected chlorinated organics (toluene, ethylbenzene, xylenes, methylene chloride, methyl chloroform, trichloroethylene, and perchloroethylene). The ambient air was screened or sampled for approximately 145 different gaseous contaminants, including the compounds of interest.

Air-to-air heat exchanger for a mushroom farm : final report

by H. Spieser. Toronto : Ministry of Agriculture and Food, Agricultural Energy Centre, 1987. 10 p. : ill. (Energetics)
MICROLOG 89-01129 1 fiche

Proper ventilation and temperature control are critical to continuous production in a commercial mushroom plant. During most of the year the plant exhaust air temperature is in the range of 18C, heat which can easily be recovered. A large cross-flow, plate type heat exchanger was constructed and tested at Elgin Mushrooms Ltd., built in the late 1970s with a current annual production of about 364,000 kg of mushrooms. This report provides information on the system, monitoring, and economic analysis of the heat exchanger.

Alberta aspen vs black poplar wood quality differences

by M.M. Micko. S.L. : Canada-Alberta Forest Resource Development Agreement, 1987. 38 p. : ill. ISBN 0-662-15970-5
MICROLOG 89-01401 1 fiche

Aspen is the accepted raw material of the waferboard and oriented strandboard industry both in the United States and Canada. Balsam poplar is a logical supplement to aspen waferboard or oriented strandboard furnish because it is the most abundant species in the aspen forest type. However, even small quantities of balsam poplar contribute to major problems in waferization, gluing stability, and thus panel product quality. This study identifies and evaluates the major anatomical, chemical, and physical wood quality parameters between aspen and balsam poplar in an attempt to understand the balsam poplar's potential as a raw material for the waferboard and oriented strandboard panel industry.

**Alcohol use across the life course :
a critical review of 70 years of
international longitudinal research**

by K.M. Fillmore. Toronto : Addiction Research Foundation, 1988. ix, 121 p. Bibliogr. ISBN 0-88868-163-1
MICROLOG 89-00960 2 fiche

The World Health Organization commissioned this review of longitudinal studies of drinking patterns and alcohol-related problems to evaluate the contributions, needs and limitations of longitudinal research. The review also develops guidelines and recommendations for future longitudinal studies of human alcohol use in different regions of the world. In addition, it identifies the lack of cross-study comparison to epidemiological description and demonstrates ways in which individual longitudinal studies can contribute to epidemiological description across historical periods, cultures and age cohorts. It then examines three diverse explanations of longitudinal drinking patterns and problems from the perspectives of biology, sociology and psychology, addressing how concretely replicated they are and how they are confounded by methodological problems. Finally, it develops strategies for future research.

L'Allocation des ressources humaines dans les conventions collectives des secteurs de la santé et des services sociaux : rapport de recherche

par J. Bernier...et al. Québec : Commission d'enquête sur les services de santé et les services sociaux, 1987. 147 p. Bibliogr. (Recherche ; 14)
MICROLOG 89-00894 2 fiche

Ce rapport présente les résultats d'une analyse qualitative du contenu des conventions collectives dans les secteurs de la santé et des services sociaux, selon une coupe longitudinale s'étendant de 1969 à 1985. Cinq aspects principaux relatifs à l'allocation des ressources humaines ont été retenus : l'affectation du personnel, la mobilité interne, la sécurité d'emploi, l'ancienneté et les règles de procédure.

The Allocation of health care resources : ethical and economic choices, conflicts and compromise

by P. Manga. Québec : Commission d'enquête sur les services de santé et les services sociaux, 1987. 154 p. Bibliogr. (Synthèse critique ; 33) ISBN 2-551-08479-2
MICROLOG 89-00924 2 fiche

This paper discusses specific issues that reveal the ethical and economic determinants of health policy. These issues include: medicare and distributive justice; lifestyles, responsibilities and rights to health care; the elderly, age-biased allocation and ethics; the commodification of organs, life and death by chance or utilitarian selection criteria; and priorities in bio-medical research, how, why and for whom. It presents concluding remarks and reflections.

Allowable flaw geometries in irradiated Zr-2.5% Nb pressure tubes under slar and normal operating cyclic stresses

by D.A. Scarth. Toronto : Ontario Hydro, Research Division, 1988. ii, 48 p. : ill. Bibliogr. (Report ; no. 87-292-K)
MICROLOG 89-02581 1 fiche

The assessment of blunt flaws in Zr-2.5% Nb pressure tubes involves the prevention of crack initiation from the flaw due to mechanical fatigue with subsequent crack propagation. Delayed hydride cracking may occur at even relatively shallow cracks in pressure tubes. In this report, the allowable minimum root radii of postulated U-shaped flaws in the bulk of irradiated pressure tubes are calculated such that crack initiation due to mechanical fatigue will not occur under SLAR (Spacer Location and Repositioning) and normal operating cyclic stresses.

ALRT impact assessment baseline travel survey : final report

by D. Peterson and R. Glover. Montreal : Transportation Development Centre, 1987. ix, 193 p. : ill. Bibliogr. TP 8983.
MICROLOG 89-05395 3 fiche

SkyTrain has been operating in the Vancouver region since January 1986. As it represents a

major change in transportation service levels in the region, it is expected that travel patterns will undergo significant change. The Advanced Light Rapid Transit (ALRT) impact assessment baseline travel survey was undertaken from September to November 1985 to provide a description of travel patterns in the Vancouver region prior to SkyTrain. The project included a home interview survey of over 25,000 households, a trip diary administered to approximately 1,700 households, traffic screenline counts, an external cordon survey, a taxi survey, a survey of trips for work or business purposes, a survey of SkyTrain riders and an inventory of parking near SkyTrain stations. This final report presents the results of the survey in detail.

Alternative methods of valuing commercial forest resources in Newfoundland

by G.R. Milne. St. John's : Government of Canada, Canadian Forestry Service, Newfoundland Forestry Centre, 1988. vii, 59 p. : ill. Bibliogr. (Information report ; N-X-258) ISSN 0704-7657 ISBN 0-662-16476-8 MICROLOG 89-02064 1 fiche

The value of commercial timber in Newfoundland is represented by stumpage prices which are established as regulated rates rather than through competitive markets. These prices are low by international standards and reflect government policies set at the turn of the century, designed to encourage forest industry development. Using stumpage prices as a measure of value can hamper internal government economic analyses and policy formulations relating to forestry. This report presents 3 alternative models developed to value commercial forests: gross government expenditure, net income value to government, and net social value. Results are derived and compared to stumpage price as a measure of value.

Ampacity studies of Riverside Jct x Strachan TS cable circuits

by G.J. Anders. Toronto : Ontario Hydro, Research Division, 1988. 21 p. : ill. Bibliogr. (Report : no. 88-86-K)
MICROLOG 89-02568 1 fiche

As a result of the discussions at the Underground Power Transmission Research Panel meeting in September 1985, a Task Force was formed to perform a study and measurements to review ampacities of 12 115 kV cables between Riverside Junction and Strachan Transformer Station. This report presents the results of those computations based on field measurements of thermal resistivities and the application of the classical IEC/Neher-McGrath techniques. The report also introduces a probabilistic method for thermal analysis of power cables in the system planning process. An advanced finite element method in conjunction with the Monte Carlo simulation is applied for calculating the temperature rise of power cables with provision for statistical variations of various soil, boundary and loading conditions. The probability distribution of cable operating temperature is obtained and used in performing a cost-benefit analysis of delaying new cable installations.

Analyses des comptabilités agricoles des fermes laitières des syndicats de gestion, 1984

par B. Amyot. Québec : Gouvernement du Québec, Ministère de l'agriculture, des pêcheries et de l'alimentation, Direction générale de l'économie, Direction de l'économie de la production. 1988. 213 p. (Gestion de ferme) ISBN 2-550-19080-7

MICROLOG 89-04679 3 fiche

Cette publication présente les principales données provenant de comptabilités d'agriculteurs et de membres des syndicats de gestion. Elle fournit une étude de la représentation des fermes laitières des syndicats de gestion regroupés en trois zones soit périphérique, intermédiaire et centrale. Par la suite, on présente la représentativité des fermes de lait industriel et une analyse plus détaillée des fermes de lait nature en plus d'une analyse de groupe de chacune des zones selon trois modes de regroupements soit le nombre de vaches par ferme, le volume de production par ferme et le rendement laitier par vache.

Analyses des comptabilités agricoles pour le Québec et chacune des régions agricoles, lait industriel, 1986

par B. Amyot. Québec : Gouvernement du Québec, Ministère de l'agriculture, des pêcheries et de l'alimentation, Direction générale de l'économie, Direction de l'économie de la production. 1988. 81 p. (Gestion de ferme) ISBN 2-551-12035-7

MICROLOG 89-04681 1 fiche

Ce document est une étude de la représentativité de l'échantillon pour le nombre de fermes, le volume total de production ainsi que le volume de production par ferme. Il renferme l'analyse du bilan à l'aide de ratios présentés par regroupement selon le nombre de vaches par ferme, le volume de lait produit par entreprise et le rendement laitier par vache. Par la suite, il présente l'analyse de groupe de chacune des régions agricoles et des trois modes de regroupements retenus. Finalement, on y retrouve un élément d'analyse à savoir le calcul du revenu standard du travail.

Analysis of changes in timber values due to silviculture treatments under the Canada-B.C. Forest Resource Development Agreement

S.I. : Forest Resource Development Agreement, 1988. 67 p. : ill. Bibliogr. (FRDA report : 041) ISSN 0835-0752
MICROLOG 89-04516 1 fiche

Study to determine the changes in value of stems of trees of the major species in British Columbia resulting from changes in tree size, particularly diameter. In addition to value changes with height and diameter, the value of achieving knot-free clear wood increments to the stem were to be determined. Information was obtained from a literature search and industry and government sources, with stem values expressed in constant Canadian 1986 dollars. The results are to serve as a reference for the determination of commercial value benefits attributable to the achievement of growth through application of silvicultural prescriptions.

Analysis of costs and benefits of installing fire sprinklers in houses

prepared for Jacques Rousseau ; submitted by A.T. Hansen Consulting Services. Ottawa : Canada Mortgage and Housing Corporation, 1988. 78 p. Bibliogr.
MICROLOG 89-04271 1 fiche

The mandatory sprinkling of Canadian houses is being advocated by a number of agencies concerned with fire safety. Apprehension by the housing industry about the additional cost that this would impose on houses has led to the initiation of an examination by the Corporation of the costs and benefits associated with the sprinkling of houses. This report outlines a cost-benefit procedure that is appropriate for Canadian conditions. The range of buildings investigated in this study is limited to one and two-family dwellings including mobile homes, bungalows and two-storey houses.

Analysis of experimental data for cast 10-2/DOA 2 supercritical airfoil at low Reynolds numbers and application to high Reynolds number flow

by Y.Y. Chan. Ottawa : National Aeronautical Establishment, 1989. vii, 33 p. : ill. Bibliogr. (Aeronautical note : NAE-AN-60)
MICROLOG 89-05293 1 fiche (Available on fiche only)

Extrapolating aerodynamic characteristics of an airfoil or a wing from modal testing in a wind tunnel at low Reynolds numbers to flight Reynolds number, usually having much higher values than that of the model testing, is always difficult because of the highly nonlinear behaviour of the boundary layer. The problem is exaggerated at transonic speeds as the inviscid flow is extremely sensitive to the effective change of the shape of the profile due to the boundary layer displacement. This report presents the results of an experimental investigation of CAST 10.2 DOA 2 supercritical airfoil previously conducted in the NAE two-dimensional test facility and extended to low Reynolds number range at the design Mach number 0.765.

Analysis of language mobility : indexes, observations and models

by R. Lachapelle. Ottawa : Statistics Canada, Social and Economic Studies Division, 1985. 36 p. Bibliogr. CSI 01100.230
MICROLOG 89-02471 1 fiche

This document presents two methods of analyzing language mobility. The first is based on the distinction between structural mobility, which produces a change in the final (or home-language) composition relative to the initial (or mother-tongue) composition, and exchange

mobility, which measures the frequency of balanced transfers between each pair of languages. The two corresponding sets of parameters, together with mother-tongue composition, summarize all the information contained in a cross-tabulation of the population by mother tongue and home language. The second method entails the transformation of language mobility rates into an equilibrium composition. The latter is then compared with the observed compositions.

Analysis of sediment data from the Beaufort Sea Shorebase Monitoring Program, 1982 to 1984

by P.F. Wainwright and B. Humphrey. Ottawa : Environmental Studies Research Funds, 1988. viii, 147 p. : maps. Bibliogr. (Environmental Studies Research Funds report ; no. 090)
ISBN 0-920783-89-9
MICROLOG 89-00753 2 fiche

Oil exploration and production activity in the Canadian Beaufort Sea has an associated risk of causing adverse environmental impacts. To assess any adverse effects from this industrial activity and to assess the effectiveness and appropriateness of regulatory controls, a detailed understanding of the present conditions of the environment is necessary. A program to monitor sediments from the shorebase areas in Tuktoyaktuk Harbour and McKinley Bay was initiated in 1982 and continued in a revised form in 1983 and 1984. These programs resulted in the collection of sediment samples at over 100 stations for analysis of metals and hydrocarbons. This report interprets the 1984 Shorebase Monitoring data for the environmental significance and extent of anthropogenic inputs in the areas sampled compared to background levels in the Beaufort Sea and elsewhere, and extends the analysis to the entire Shorebase data set.

Analysis of switching duty expected on high-speed 500 kV SF6 disconnects at Bowmanville SS

by A. Narang. Toronto : Ontario Hydro, Research Division, 1988. 10 p. : ill. Bibliogr.

(Report ; no. 88-167-K)
MICROLOG 89-02563 1 fiche

Bowmanville Switching Station is a gas insulated station located less than a kilometre from Darlington Nuclear Generating Station. High-speed SF6 disconnects are provided on each of 4 circuits supplying the station service transformers (SST) at Darlington to provide a means of switching the SSTs off potential without de-energizing the respective gas insulated station bus. Switches were designed specifically for this location. However, analytical studies and computer simulations performed to quantify the switching duty expected, suggested that the interrupting duty imposed on the disconnect is considerably more severe than specified. This report documents the analysis and concerns regarding the use of the disconnect in this application.

An Analysis of the use of daytime running lights in the CVA fleet in Saskatchewan

prepared by Gordon A. Sparks and Russell D. Neudorf ; in association with Anne E. Smith. Regina : SaskAuto, 1989. iv, 82 p. : ill. Bibliogr.
MICROLOG 89-06089 1 fiche

During the summer of 1985, Saskatchewan Government Insurance installed automatic daytime running light devices (DRLs) on 4000 vehicles owned by the Provincial Central Vehicle Agency (CVA). These devices automatically turn on (off) the low beam headlights and the parking lights when the ignition is turned on (off). This study assessed the effect that the use of daytime running lights had on the number and severity of accidents experienced by the CVA fleet. The accident experience of the CVA vehicle fleet was studied over 8 years (1980-87) - 6 years before installation of the DRLs and 2 years after. Accident experience was first summarized by total number of accidents involving damage of over \$500 per year, then broken down into number, severity, cost, and configuration. A detailed statistical profile was then conducted on the breakdown.

Angler catch and fishing effort diary : 1983 and 1984 pilot study at Plummer's Great Slave Lake Lodge, N.W.T.

by P.C. Thompson, L.E. Anderson and H.R. Ellison. Winnipeg : Dept. of Fisheries and Oceans, Central and Arctic Region, 1988. v, 27 p. Bibliogr. (Canadian technical report of fisheries and aquatic sciences ; no. 1631) This is the 18th technical report from the Central and Arctic Region, Winnipeg. ISSN 0706-6457 MICROLOG 89-01209 1 fiche

Great Bear and Great Slave Lakes in the Northwest Territories are two of Canada's most important northern sport fisheries. Angler catch and effort data are usually supplied by creel census, which are more expensive in this area. A pilot survey using angler and guide diaries was conducted to compare the two methods and determine their costs. The angler diary was tested at one large lodge (capacity more than 40 guests) which offered guide services, and one small lodge (capacity fewer than 15 guests) and no guides. The guide diary was tested at 2 large lodges on Great Bear Lake, one in each of the 2 years. This report examines the pilot study of the angler diary at Plummer's Great Slave Lake Lodge (the large lodge) in 1983 and 1984 to determine if the anglers would participate at an acceptable response rate; the quality of data provided, how to get the level of cooperation needed from the lodges; how the results compared with those from creel surveys; the effective design for the diary; and the costs of the angler diary method.

The Angling fishery of the lower Red River

by W. Lysack. Winnipeg : Dept. of Natural Resources, Fisheries Branch, 1986. iii, 171 p. ill. Bibliogr. (Manuscript report ; no. 86-16) Appendices not filmed. MICROLOG 89-00744 2 fiche

A creel survey of anglers exploiting the Red River from the St. Andrews locks at Lockport to the mouth of Netley Creek was conducted to quantify spatial and temporal changes in species specific numbers and weights of fish harvested from the river; to quantify spatial and temporal changes in angling effort; to describe the age structure and growth regimes of commonly angled species, and to examine if relationships exist between walleyes and saugers angled in the Red River and netted by commercial fishermen in southern Lake Winnipeg. Stationary creel surveys were executed at 4 access points from May-October 1982. A roving survey of the winter fishery on the Red River was conducted from December 1982-March 1983. Fish harvests, not catches were determined during this survey. Numbers and weights of fish caught and returned to the river were not determined. A stratified random sampling scheme was used to estimate species specific catch per unit of effort and total angling effort during the open water period. FI MS PR SC

Annotated bibliography on reproductive health hazards in the workplace in Canada

Ottawa : Labour Canada, Women's Bureau, 1988. 74 p. ISBN 0-662-16236-6
MICROLOG 89-00210 1 fiche

Since the majority of women are now in the paid labour force, the relationship between work and reproduction is of great importance to individual families and to Canadian society. This bibliography was compiled as a guide for anyone who wishes to obtain more information on the subject of reproductive health hazards in the workplace. The emphasis is on Canadian material and experience since 1980 and relevant legal cases since 1970. It includes social, legal, medical, economic, scientific and political research and arguments which commonly arise. The issues addressed in the material include: hazards of women's jobs traditionally considered safe; reproductive hazards to men; protective and anti-discrimination legislation; exclusionary policies of employers; hazards associated with video display terminal use; and strategies for achieving healthier and safer workplaces.

Application of satellite and airborne geophysical imagery in the search for massive sulphide deposits, Heath Steele area, New Brunswick, Canada

by J.G. Torrance and M. Lodin. Fredericton : Dept. of Natural Resources and Energy, Minerals and Energy Division, 1988. 23 p. : ill., fold. maps. Bibliogr. (Open file report ; 88-23) ISSN 0712-4562
MICROLOG 89-01296 1 fiche

Owing to the paucity of rock exposure and the structural complexities in the Heath Steele Mines area of the Bathurst mining camp, remote sensing must be used to add further information to the geological database. Multi-data LANDSAT MSS and LANDSAT TM satellite digital imagery was acquired and analysed and computer searches for multi-spectral characteristics (signatures) similar to those of known gossan occurrences were conducted using discrete pixel and aerial search parameters. An integrated approach combining both digital satellite imagery and interpolated airborne geophysical raster data was employed. A fully annotated, continuous tone, TM base map was plotted on paper at 1:50,000 scale using a Calcomp 5835 plotter. Binary colour image TM signature search plots were produced on acetate at the same scale so that they could be overlaid on the basemap.

Apprenticeship and industry training review : comments of the Advisory Panel on the Review Committee final report

Alberta. Apprenticeship and Industry Training Review Committee. Advisory Panel. Edmonton : The Committee, 1988. iv, 14 p. MICROLOG 89-01076 1 fiche

In February 1988, the Review Committee Report presented 25 recommendations dealing with issues related to current apprenticeship practices, and the future of apprenticeship training in Alberta. The Advisory Panel met to review these recommendations in March 1988. This document presents the results of that review and provides a report on the following major issues: compulsory apprenticeship, certification, cross-crafting, roles of the Board, composition of the Board, and inter-provincial co-ordination.

Apprenticeship and Industry Training Review Committee final report

Alberta. Apprenticeship and Industry Training Review Committee. Edmonton : The Committee, 1988. ix, 54 p. MICROLOG 89-01075 1 fiche

This report consists of: a review of the existing apprenticeship training system, and the role apprenticeship will play in industrial training in the coming years; an overview and summary of the public input which the Committee received through written submissions and public hearings; a review of the issues raised by the public pertaining to the current structure and practices of apprenticeship; a discussion of the anticipated needs of industrial training and recommendations of possible initiatives to address these needs; and a final word on apprenticeship training, its past and its future. It also includes two appendices which provide a full list of submissions to the Review Committee

and a background summary of apprenticeship training and the perceived economic goals of the province.

Aquaculture and the administration of coastal resources in British Columbia

Victoria : Ombudsman of British Columbia, 1988. 161 p. Bibliogr. (Public report : no 15) MICROLOG 89-01757 3 fiche

The dramatic increase in aquaculture activity along the B.C. coast in the past few years has brought with it not only the promise of economic growth and stability, but the potential for conflict among the many competing users of coastal resources. These concerns have caused the Ombudsman's office to prepare this systems study of the regulation of aquaculture. The report deals with principles of administrative fairness and not with the technical or political aspects, and includes a discussion of the Gillespie report and brief reviews of practices in Canada, the United States, Sweden, and Norway. The report concludes with three major recommendations which address the statutory authority for the administration of aquaculture, the integrated management of coastal resources and activities, and the consensual resolution of related public interest disputes.

Aquatic environment of Humber Bay

edited by M. Griffiths. Toronto : Ministry of the Environment, Water Resources Branch, 1988. 111 p. : ill., maps. Bibliogr. ISBN 0-7729-2916-5
MICROLOG 89-00128 2 fiche

Humber Bay is part of the Toronto Waterfront which, for a number of years, has been identified as a Great Lakes area of concern by the International Joint Commission (IJC). This designation is based on the discovery of organic contaminants and metals in the sediments of the area, presence of trace contaminants (metals, organics) in water and local biota, elevated nutrient levels, and bacterial contamination, particularly in response to runoff conditions. Recent heightened awareness of pollution problems have led to a number of studies aimed at identifying the sources of contamination, documenting the extent of environmental degradation and developing abatement studies. This report summarizes the findings of these studies and reports on the status of remedial programs.

Aquatic vegetation on the Canadian prairies : physiology, ecology, and management

by J.R. Allan, T.G. Sommerfeldt and J.A. Braglin-Marsh. Ottawa : Agriculture Canada, Research Branch, 1989. 1, 46 p. : ill. Bibliogr. (Technical bulletin ; 1989-6E) ISBN 0-662-16807-0
MICROLOG 89-04237 1 fiche

Description of the aquatic ecosystem, discussing the interrelationships between the non-living environment and the living biotic communities. Emphasis is on the understanding of the life cycles of aquatic plants and how their growth should be limited before it becomes excessive. The report discusses aquatic vegetation management techniques, and control procedures are given for specific problems in different aquatic environments. The information given assists farmers, irrigators, irrigation managers, water users and environmentalists to preserve the Prairies' freshwater resources.

Architectural and engineering consultant index

Ottawa : Public Works Canada, 1988. 23, 23 p. Bilingual (Répertoire des experts...). ISBN 0-662-56238-0
MICROLOG 89-01947 1 fiche

The Index is a national inventory of consulting firms qualified to perform work in architecture, engineering, and related fields. Firms that register are those that are interested in obtaining commissions from Public Works Canada and Defence Construction Canada. The objectives of the system are: to ensure equitable access to government commissions; impartial evaluation of proposals; accountability in the selection process; and an accurate record of consultants' performance. For commissions \$3,000 and under, the system randomly selected a short list of qualified firms; for commission between \$3,000 and \$100,000, a single qualified firm is selected; for commissions between \$100,000 and \$2 million, a short list of three, four, or five firms are generated; for commissions over \$2,000,000, the Index may be used to identify qualified consultants, or public advertising for expressions of interest may be used to establish a short list for proposals. Evaluation criteria are set out in the proposal call.

Artisans in economic development : evidence from Asia

Elwood A. Pye, editor. Ottawa : International

Development Research Centre, 1988. x. 125 p. : ill. Bibliogr. CS/ 22239 202 ISBN 0-88936-508-3
MICROLOG 89-01878 2 fiche (Available on fiche only)

Despite the size of the artisan work force in Asia, they have rarely been examined in terms of development-oriented research. This book provides a detailed examination of workers employed as artisans at a time when rapid growth of exports and competition from factory products are forcing fundamental changes in this sector that has traditionally been responsible for creating millions of new jobs and earning a large amount in foreign exchange. Research into recent changes in this sector was carried out in Nepal, Sri Lanka, India, Malaysia, Indonesia, Thailand, and the Philippines. Research covers the three major markets to which artisans cater: local domestic consumption, tourists, and exports, in order to study different market responses as well as production problems unique to each market. Also, the document reports on supply and demand issues that affect production and assesses the policy environment. Each country is studied separately on the organization of production, market structures, socioeconomic information on the artisans, supply and demand, and government support programs.

Asb conditioning for improved ESP performance

by M.S. Mozes...et al. Toronto : Ontario Hydro, Research Division, 1988. iii, 28 p. : ill. Bibliogr. (Report ; no. 88-138-K)
MICROLOG 89-04454 1 fiche

Ontario Hydro's coal fired stations are equipped with electrostatic precipitators (ESP) for collecting ashes from flue gases. These precipitators were designed for collecting ashes from bituminous coals with a sulphur content ranging from 1.5-2.2%. Collection efficiencies drop significantly when these ESPs are used for collecting ashes with resistivities exceeding 5 x 10¹⁰ ohm cm, such as at Nanticoke Thermal Generating Station, where low sulphur coal blends are being burned. This report summarizes the results of the ash conditioning studies conducted in support of the full scale tests carried out in September 1987 at Lakeview Thermal Generating Station. The study evaluated a number of conditioning agents such as SO₃ and water on the pilot scale, that may be used by Ontario Hydro for conditioning low sulphur coal ashes and sorbent injection wastes. The studies were carried out while burning a 0.3% sulphur western Canadian coal from the Luscar Mine of Alberta and a 1.4% sulphur United States-Western Canadian coal blend with limestone injection.

Assessment of earthquake effects on residential buildings and services in the Greater Vancouver Area

by A.M. Jablonski...et al. Ottawa : Canada Mortgage and Housing Corporation, 1989. 34 p. : maps. Bibliogr.
MICROLOG 89-04332 1 fiche

On the basis of previous earthquake damage, mainly in California and Alaska, this document makes an assessment of the effects on residential buildings during and after an earthquake. It considers the "design level earthquake" of the National Building Code of Canada, 1985 edition, and a "major earthquake" corresponding to a slip of the tectonic plates along the west coast of British Columbia, also called a "major subduction earthquake".

An Assessment of five upper Fraser River chinook salmon sport fisheries, 1987

by N.D. Schubert. Prince Rupert, B.C. : Dept. of Fisheries and Oceans, Fisheries Branch, 1989. xi, 59 p. : maps. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences : no. 1983) ISSN 0706-6473 MICROLOG 89-05768 1 fiche

The harvest of chinook salmon adults in Fraser River sport fisheries was eliminated in 1980 as one of several measures to increase chinook escapements. In 1986, sport fisheries for chinook salmon adults were permitted in 4 upper Fraser River tributaries. These fisheries were continued and expanded in 1987. This report describes the study design and field procedures and documents the results of the 1987 sport fishery assessment studies in the Bowron, Bridge, lower Quesnel, lower Shuswap and South Thompson rivers. The report presents estimates of angler effort, harvest and release by species and angler attributes in each fishery, and concludes with a discussion of results and recommendations for the management and assessment of future fisheries. • BC CA CF FI SC

Assessment of ichthyoplankton entrainment at Bruce NGS A, 1985-86

by R.S. McKinley. Toronto : Ontario Hydro, Research Division, 1988. iii, 17 p. : ill. Bibliogr. (Report : no. 88-15-K) MICROLOG 89-02566 1 fiche

Ichthyoplankton entrainment at power plants using a once-through cooling process, and the subsequent impact on fish stocks, received considerable attention and several models for impact assessment were suggested, all of which require a reliable measure or estimate of abundance and mortality for all species entrained. This study summarizes, for 1985-86, estimates of ichthyoplankton abundance and composition entrained at Bruce Nuclear Generating Station A. Measures of "natural" mortality and mortality due to passage from the intake-cap to the intake-forebay, from the intake-forebay to the discharge, and survival were estimated. As well, the diurnal distribution patterns of the dominant species entrained over 24 hours were estimated. EN EV ON PR SC

Assessment of lake trout backcross in southern Georgian Bay, 1987

by D.N. Hughes. Toronto : Ministry of Natural Resources, 1988. v, 34 p. Bibliogr. MICROLOG 89-05403 1 fiche

Lake trout in the Georgian Bay basin were decimated by sea lamprey predation in the mid-1950s and became extinct by the early 1960s. Rehabilitation was begun focusing on the lake trout backcross, with plantings beginning in 1979 in southern Georgian Bay. These plantings were very successful and led to increasing harvest pressure. This report summarizes the results of the 1987 assessment program, including discussion of changes in abundance, age structure, and estimated mortality rates from 1979-87. Comments on the progress toward the goal of rehabilitating the lake trout population are also provided. FI ON PR SC

Assessment of light duty gasoline vehicle emissions inspection and maintenance program options for the lower mainland area

Lower Mainland Oxidants Steering Committee (Canada). Task Force on Motor Vehicle Emission Inspection/Maintenance (I/M). Ottawa : Environment Canada : Vancouver, B.C. : Greater Vancouver Regional District : Victoria : The Province, 1989. xiv, 253 p. : ill.

Bibliogr. ISBN 0-7726-0933-0 MICROLOG 89-03677 3 fiche

The Lower Mainland of British Columbia is recognized as one area in the country with potential problems of photochemical oxidants pollution. In late 1985, a Task Force on Motor Vehicle Emission Inspection/Maintenance (I/M) was set up to examine the feasibility of an I/M program for the area. This report presents the findings of the Task Force, including brief background information on emissions of photochemical oxidant precursor contaminants and on the relevant air quality situation in the area; the characteristics of the emissions, the types of available emission control technology, and the potential increase in emissions due to malmaintenance, tampering and misfueling; a summary and description of existing and proposed I/M programs in the U.S.; an estimation of the potential emission reductions due to introduction of new federal emission standards, for 1988 and later model years, and several types of I/M programs; and the outline of an I/M program for the area. • BC CA EV MU SC TR

An Assessment of Morton's model for estimating areal evapotranspiration

by R.J. Granger and D.M. Gray. Saskatoon, Sask. : Environment Canada, Ground Water Division, National Hydrology Research Institute, 1989. viii, 61 p. : ill. Bibliogr. (NHRI contribution : no. 89003) ISSN 0838-1992 MICROLOG 89-06367 1 fiche

This report presents an evaluation of the complementary relationship areal transpiration model (CRAE) proposed by Morton (1983), its theory and formulation, procedures and methods used to describe the model components, the sensitivity of model output to input variables, and the performance of the model for estimating seasonal and daily evaporation-evapotranspiration amounts, from the disappearance of the seasonal snow cover to harvest, in a Prairie environment. Assessment of public concerns and possible environmental effects related to the Regional Sewage Treatment Project

Halifax Harbour Cleanup Review Committee. Halifax : The Committee, 1988. iv, 106 p. Bibliogr. MICROLOG 89-02234 2 fiche

The Committee was established by the Nova Scotia Environmental Control Council in Summer 1988 to provide an impartial third party review

of public concerns and possible environmental effects associated with the Metropolitan Area Planning Commission proposal for a regional primary sewage treatment plant at Sandwich Point. The proposal is intended to eliminate discharge of untreated sewage to Halifax Inlet within 6 years. The Committee reviewed the available literature on Halifax Inlet and sewage treatment proposals spanning the last 18 years, and received submission on the proposed scheme from individuals and various interest groups. Public concerns are divided into those about the planning process, design considerations, construction, and operation. The report presents a summary of these, and recommendations. AP EV PR PW SC

Assessment of quality of PAYDAC file and PD20 form frame data

by R. Lussier and D. Beckstead. Ottawa : Statistics Canada, Methodology Branch, Business Survey Methods Division, 1985. 64 p. : ill. Bibliogr. MICROLOG 89-02444 1 fiche

The PAYDAC file and the PD20 forms are two administrative sources that have been supplied by Revenue Canada-Taxation to Statistics Canada and have been used to update the Business Register (BR). This paper presents quality issues with respect to the usage of these two sources in the maintenance of the BR. It analyses and summarizes readily available documentation and counts relevant to these issues. Finally it formulates suggestions for future investigations. • CA ST

Assessment of regeneration stocking standards used in Alberta : a follow-up

by I.E. Bella and J.P. DeFranceschi. Edmonton : Government of Canada, Canadian Forestry Service, Northern Forestry Centre, 1978. iii, 24 p. : ill. Bibliogr. (Information report : NOR-X-211) ISSN 0704-7673 MICROLOG 89-00190 1 fiche

This is the second phase of a study conducted to update reforestation standards used in Alberta. The analysis was based on growth and size information of open-growing lodgepole pine and white spruce to estimate the minimum number of well-dispersed trees and stocking percentage required for complete site utilization at reference age of half rotation (40 years for lodgepole pine, 40 or 50 years for white spruce). Relationships were developed to show, by stocking percentage classes, the relative frequencies of stocked quadrants with at least 1, 2, 3, etc. seedlings. • AL CA FO SC

Assessment of retiming tidal power from Bay of Fundy using compressed air energy storage

Canadian Atlantic Power Group Ltd. Ottawa : Energy, Mines and Resources Canada, Renewable Energy Branch, 1988. 140 p. : ill. MICROLOG 89-05743 2 fiche

Examination of the economic viability of using compressed air energy storage (CAES) to retime cyclic power from the proposed tidal power plant at site A8 at the mouth of Cumberland Basin in the Bay of Fundy. Prefeasibility level cost and energy estimates were prepared, based on conceptual arrangements of air compressor, generating plants and underground storage facilities. These estimates were then related to the potential marketability of the retimed power and energy. • AP CA EN SC

An Assessment of the accuracy of the Manitoba General Moose Hunter Questionnaire Survey

by D.W. Soprovich. Winnipeg : Manitoba

Natural Resources, Wildlife Biological Services, 1989. x, 130 p. Bibliogr. (Technical report ; no. 89-02)

MICROLOG 89-05891 2 fiche

Evaluation of the accuracy of the standard mailed questionnaire method used to estimate the general moose harvest. The standard method for estimating harvest was simulated by sending one questionnaire to a systematic sample of general moose licensees, with a 2nd questionnaire sent to licensees who had not responded within 30 days. Mailing number was then used to determine wave. As well, the number of questionnaires was used as the independent variable rather than the percentage response.

An Assessment of the potential for coal-derived syncrudes in Canada

by K.M. MacRae. Calgary, Alta. : Canadian Energy Research Institute, 1988. xxvii, 158 p. : ill., maps. Bibliogr. (Study ; 27)

ISBN 0-920522-49-1

MICROLOG 89-00328 3 fiche (Available on fiche only)

Within the context of Canada's future energy demand and declining conventional crude oil production, this report examines recent advances in coal liquids technology and assesses the potential role of coal-derived synthetic fuels in the evolving energy technology mix. The model used in this study allocates, on an optimal basis, all the relevant Canadian energy resources - conventional and frontier crude oil, natural gas, bitumen, and coal - among the potentially available technologies and also over time. The supply cost analysis, production and on-stream development scenarios presented for upgraders, mined oil sands plants and coal liquids facilities are based on a complete re-assessment of the potential costs of all of the major energy supply options, measured against a re-evaluation of the Institute's CREED model and a linear programming model developed by the Alberta Research Council. A detailed evaluation, undertaken by the MITRE Corp. in the U.S., of recent advances in direct coal liquefaction together with a study published by the Electric Power Research Institute on coal/oil co-processing, formed the basis of the state-of-the-art coal liquids technology.

Assessment of the proposed tariff snapback provisions for fresh fruit and vegetables

Toronto : Ministry of Agriculture and Food, 1987. iv, 39 p. CSI 55137.201.

MICROLOG 89-00657 1 fiche

Under the Canada-U.S. Free Trade Agreement, all tariffs will be eliminated over a 10-year period. Fresh fruit and vegetables are the only goods singled out for special treatment. For 20 years, both Canada and the U.S. can reintroduce tariffs on fresh fruit and vegetables provided import prices are unusually low and there has been no expansion in crop acreage. This paper evaluates the degree of protection provided by the proposed special provisions allowing for the snapping back of tariffs, focusing on how frequently the tariff snapback conditions would be met and discussing the implementation of these provisions.

Assessments of a cod farming operation in Newfoundland

by R. Fisher. St. John's : Dept. of Fisheries and Oceans, Newfoundland Region, Fisheries and Habitat Management, Fisheries Development Division, 1988. vi, 81 p. ill. Bibliogr. (Canadian industry report of fisheries and aquatic sciences, no. 194) ISSN 0704-3694
MICROLOG 89-04958 1 fiche

Live Atlantic cod ranging in length from 30-60 cm were collected from cod traps operated by commercial fishermen. These fish were purchased at the trap site, transferred to tanks on collector boats and transported to a marine farm for maintenance and grow-out. Mortalities were assessed during transportation and grow-out and possible causes were identified. The tagging and measuring of individual fish provided an assessment of growth during the grow-out period. This, as well as data on feed types, amounts and schedules, general observations on farming logistics, and suggestions for improvement are included.

This report provides catch and effort data in the Atlantic salmon commercial and recreational fisheries in Newfoundland and Labrador in 1985. Data from the commercial fishery were summarized weekly; catches are given by weight and by number for Statistical Sections, Statistical Areas, Management Areas, NAFO Unit Areas and Divisions, Newfoundland Region (insular, Labrador, total). Historical, catch, effort, and mean weight data are also provided. Catch and effort data collected from the recreational fishery are also summarized weekly and given by river, Statistical Section, Statistical Area, Gulf Region (Newfoundland portion), Newfoundland Region (insular, Labrador, total), and Provincial Summary (insular, Labrador, total). Scheduled rivers are listed alphabetically and geographically. Historical data from 1953-85 are presented for insular Newfoundland, Labrador, and the province.

Atlas of nearctic shorebirds on the coast of South America

by R.I.G. Morrison and R.K. Ross. Ottawa : Environment Canada. Canadian Wildlife Service, 1989. 2 v. : maps. Bibliogr. ISBN 0-662-16511-X
MICROLOG 89-05535 4 fiche

Atlas presenting the results of aerial surveys undertaken to determine the principal wintering areas used by nearctic shorebirds on the coast of South America. The surveys, carried out in January/February from 1982-1986, covered 28,000 km of the South American coastline and included nearly all parts of the coast thought to contain significant habitat for shorebirds. Volume 1 contains an introduction, methods, an overview summarising the distribution of shorebirds on the coast on a continental level, discusses the shorebird distribution in relation to geomorphology and environmental conditions and reviews the need for international cooperation in the conservation of shorebirds, citing the Western Hemisphere Shorebird Reserve Network as an example of a major conservation initiative that has arisen

from internationally coordinated distributional studies. Volume 2 gives detailed information on shorebird distribution country by country. Data for each survey sector are summarized by size category on the maps.

Attitudes of seniors to special retirement housing, life tenancy arrangements and other housing options

by G.M. Gutman, S.L. Milstein and V. Doyle. Ottawa : Canada Mortgage and Housing Corporation, 1987. iv, 134 p.
MICROLOG 89-04398 2 fiche

In the summer and fall of 1987, a series of focus groups were conducted in order to ascertain the market, among elderly homeowners, for a range of housing options including special retirement housing and financial mechanisms and tenures that can improve affordability. Participants were 59 males and 64 females ranging in age from 52-84 living in Vancouver, Winnipeg, Toronto, Montreal and Halifax. The report highlights differences in the views of those aged 52-64, 65-74 and 75 and over, and between the 5 cities. It describes modifications made to the focus group technique which permit quantitative data analysis.

Automobile insurance ratemaking in the presence of asymmetrical information

by G. Dionne and C. Vanasse. Montreal : Université de Montréal, Centre de recherche sur les transports, 1988. 32 p. Bibliogr. (Publication, no. 603) (Cahier, 8834)
MICROLOG 89-01234 1 fiche

Automobile insurance is an example of a market where multiperiod contracts are observed. This form of contract can be justified by asymmetrical information between the insurer and the insured. Since the observed length of contracts may not be long enough to permit statistical convergence, insurers also use risk classification together with bonus-malus systems. This paper shows that the actual methodology for the integration of these two systems can lead to inconsistencies. A statistical model is then developed that integrates risk classification and experience rating using Poisson and negative binomial models with regression components. Multivariate insurance premium tables are derived as a function of time, past accidents and the significant variables in the regression. The statistical results were obtained from a sample of 19,013 drivers.

A description of the forecast process and methodology is also included. BC EN PR SC ST

B.C. Hydro-Alberta Interconnected System generation coordination study

Victoria : B.C. Hydro, Resource Planning ; Edmonton : TransAlta Utilities Power Planning, 1989. 22 p. : ill.
MICROLOG 89-03685 1 fiche

Since the B.C. Hydro system and the Alberta Interconnected System differ significantly in their generation mix, this study was undertaken to identify the benefits from increased coordinated operations and construction of new facilities. Four options were reviewed and compared to the base case. The study reviews a range of options from operational coordination to coordinated operation and construction, selected to estimate the benefits of generation coordination excluding transmission limitations. Each utility provided estimates of production costs for its existing system, as well as capital and production costs and schedules for new resource options. Total cost for each level of generation coordination was calculated for each of the 21 years (1990-2010 inclusive) and the present value calculated in 1988 dollars. Resource schedules were developed for each level using B.C. Hydro's resource planning models. AL BC EN PR SC

Victoria : Ministry of Forests and Lands, 1987. 20 p. : ill. Bibliogr. ISBN 0-7718-8594-6 MICROLOG 89-04825 1 fiche

Bark beetles a native of the forests of B.C., are among the most dangerous forest insect pests, since they can kill large numbers of mature pine, spruce and other tree species. This pamphlet describes the appearance of 2 common species, the damage done, and long-term and short-term management practices. BC FO PR SC

Barriers to recycling of hazardous waste

Technology Resource Inc. Ottawa : Canadian Council of Resource and Environment Ministers, 1988. 123 p. : ill. Bibliogr. ISBN 0-7726-0912-8 MICROLOG 89-04227 2 fiche

In December 1987, the Canadian Council of Resource and Environment Ministers commissioned a review of the barriers to recycling of hazardous waste in Canada. The study identified industrial sectors which generate hazardous waste and economic, legislative, technological, and corporate/institutional barriers to recycling. It also identified and evaluated economic incentives to promote recycling and recommended policies and actions by government and industry which would stimulate recycling. Information was obtained by an extensive review of existing literature, current legislation in Canada, successful hazardous waste recycling and minimization programs in the United States, Europe and other areas of the world, and interviews with legislators and others. The Behaviour of soluble petroleum product derived hydrocarbons in groundwater, phase III

by K.L. Berry-Spark...et al. Ottawa : Petroleum Association for Conservation of the Canadian Environment, 1988. xxii, 143 p. : ill. Bibliogr. (PACE report ; no. 88-2)
MICROLOG 89-00337 2 fiche

Following a spill of petroleum products on or below ground surface, the petroleum product infiltrates the vadose zone, moving down towards the water table and leaving an immiscible residue behind. This 3-phased research program, initiated in 1984, aimed to develop an improved understanding of the processes controlling the migration of selected organic compounds, particularly the monoaromatic hydrocarbons: benzene, toluene, and xylene isomers (termed BTX). BTX-spiked and gasoline-contacted groundwater was injected into a shallow, sand aquifer and monitored for migration and persistence as they moved in response to groundwater flow. A 3-dimensional numerical model, simulating the transport and biodegradative interaction of oxygen and BTX in groundwater, was used to examine the relative importance of site-specific, hydrogeological and biogeochemical parameters in controlling the persistence and mobility of BTX. Through a model sensitivity study, the results of the field research were generalized so as to be applicable to other sites of interest.

Behavioural response in the context of socio-economic microanalytic simulation

by L. Osberg. Ottawa : Statistics Canada, Analytical Studies Branch, 1986. 90 p. Bibliogr. (Research paper series ; no. 1)
French ed. (Réaction comportementale dans...) : 89-02373/2.
MICROLOG 89-02374 2 fiche

Micro simulation, once it moves beyond simplistic incidence analysis, must consider the behavioural response of individuals to changes which legislation induces in the constraints which each one faces. This paper presents a critical survey of the labour/leisure choice framework and its usefulness in analyzing behavioural response to tax and social policy legislation. Due to its analytical simplicity, the labour/leisure framework offers a useful "first step" in modelling such behavioural response. The paper surveys the existing literature on labour supply elasticities and suggests some working assumptions. It concludes that the single period labour/leisure choice model may be a very poor guide to the behaviour of the working poor when confronted with changes in tax and social policy legislation.

The Beilstein test : a simple test to screen organic and polymeric materials for the presence of chlorine

Ottawa : National Museums of Canada, Canadian Conservation Institute, 1989. 3 p. Bibliogr. (Notes : 17/1) *French ed. (Le Test Beilstein...)* on the same fiche. ISSN 0714-6221
MICROLOG 89-06243 1 fiche

Chlorinated organic materials are generally considered unsuitable for long-term conservation and museum applications because of their potential to harm objects through degradation and production of acidic gases or the migration of additives such as plasticizers. The Beilstein test is a simple test which can be used by conservators to screen their own materials for the presence of chlorine without having to submit to laboratory analysis. This note describes the test and procedures, including test results for various polymeric organic materials.

Benchscale studies of limestone calcination and sulfation : TGA humidification studies

by A. Kalvins and B. Handy. Toronto : Ontario Hydro, Research Division, 1988. i, 23 p. : ill. Bibliogr. (Report ; no. 88-202-K)
MICROLOG 89-02545 1 fiche

Results of a benchscale study of the effect of in-duct humidification of furnace-injected limestone-based sorbents on additional SO₂ removal. Four levels of relative humidity (0, 27, 56, and 77% RH at 70°C), and temperatures ranging from 80-1000°C were studied. Testing was done on Beachville and Pt. Anne high calcium limestones, King dolomitic limestone, and Beachville hydrated lime. The partially sulfate sorbents were generated using the benchscale quartz flow-through reactor and exposed to a humidified synthetic flue gas stream in the Thermal Gravimetric Analyzer.

Beneficiation and enlargement of anthracite fines : final report

by B.Y.H. Wong...et al. Devon, Alta. : Gulf Canada Resources Limited, Coal Research Program, 1989. ii, 114 p. : ill. Bibliogr. *CANMET contract: 89045-01-SQ.*
MICROLOG 89-04491 2 fiche

Flotation is used in many preparation plants for fine coal cleaning, and oil agglomeration offers potential as well as enlarges particle size. Flotation could be a practical method for separating the clean coal and rejects obtained in the agglomeration process. There is little operating data in applying these methods for anthracite fines. This report presents the results of a literature survey; the characterization of the Mount Klappen anthracite fines; the effect of process variables in froth flotation and oil agglomeration and the production of a clean coal at optimum conditions; and the study of froth flotation as a method for separating clean coals and rejects obtained from oil agglomeration.

Beneficiation of complex sulphide ores for add-on processing, phase I : technique development

by D. Taylor. Fredericton : Dept. of Natural Resources and Energy, Minerals and Energy Division, 1989. vi, 542 p. : ill. Bibliogr. (Open file report ; 89-42) ISSN 0712-4562
MICROLOG 89-05292 6 fiche

The Province of New Brunswick realizes significant economic benefit from its base metal mining operations. This project was undertaken to encourage more base metal processing in the Province and to assess the merits of a centralized custom mill concentrator, capable of supporting add-on processing facilities. This report presents the results of Phase I, dealing with the techniques that can be used in the assessment of the custom mill concept. The report includes the results of a literature study on the custom mill concept, including the beneficiation and add-on processing of base metal complex sulphides; testing of various mineral plant simulators, emphasizing flotation simulation; and detailing the work completed on the design, construction, and operation of a

flotation column for application to the beneficiation of complex sulphides.

Beneficiation of phosphate ore from Niger

by I.B. Klymowsky and W.H. Cameron. Ottawa : Canada Centre for Mineral and Energy Technology, Mineral Sciences Laboratories, 1978. 40 p. : ill. Bibliogr. (Report ; MSL 78-6(IR))
MICROLOG 89-02406 1 fiche

Preliminary testwork was requested by CIDA on samples of phosphate ore from the Tapoa River area of southwest Niger to determine the feasibility of producing a high-grade phosphate concentrate and to provide data for developing a research proposal which could be used in soliciting bids from commercial laboratories for a more comprehensive laboratory/pilot plant investigation of the ore. The samples were mainly composed of sandstone and siltstone, and were analyzed for phosphorus. Laboratory beneficiation tests were done: 3 flotation tests on samples of the sandstone, 1 tabling test on the sandstone, and 3 flotation tests on samples of the siltstone. This report presents the results and gives an outline of the various elements to be included in a more comprehensive laboratory and pilot-plant investigation.

The Benefits of using exchange rate hedges in the fishery

by D.C. Thomas. Halifax : Dept. of Fisheries, 1988. 27 p. (Manuscript and technical report series)
MICROLOG 89-01799 1 fiche

Nova Scotia exports around 75% of its fish landings, mainly to the United States. It is thus at the mercy of international currency values, particularly fluctuations in the exchange rate between Canadian and United States dollars. This report demonstrates how financial instruments can be used to offset currency losses when selling fish in foreign markets, particularly in the near to medium term when the Canadian dollar is in an appreciating trend against its major trading partner, the United States. The report deals with the cost of fluctuating currency rates, the futures market, foreign exchange transactions, and bank forward sales. An example of such hedging in the fish processing industry is also given.

A Bibliography of triploid fish, 1943 to 1988

by T.J. Benfey. West Vancouver, B.C. : Dept. of Fisheries and Oceans, Fisheries Research Branch, West Vancouver Laboratory, 1989. iv, 33 p. (Canadian technical report of fisheries and aquatic sciences ; no. 1682) ISSN 0706-6457
MICROLOG 89-05304 1 fiche

Sexually maturing fish undergo numerous physiological and behavioural changes that may reduce their value as fish destined for human consumption. Various methods have therefore been devised and investigated to delay or entirely prevent sexual maturation in fish used for aquaculture. One of the most effective of these is in the induction of triploidy, because the resulting fish are genetically sterile. This report provides a bibliography of publications dealing with triploid fish, divided into general reviews, autotriploids, and allotriploids.

Big Sandy Lake

by R.A. Orr. Regina : Saskatchewan Parks, Recreation and Culture, Fisheries, 1988. iii, 37 p. : ill. Bibliogr. (Fisheries management report ; 88-2)
MICROLOG 89-01459 1 fiche

Big Sandy Lake is a large shallow lake important to both commercial and sport fishing. Recreational fishermen utilize both walleye and pike, while commercial fishermen harvest these species as well as whitefish. During the 1984-85 season, commercial harvest of walleye increased considerably, creating concern that stocks may be in danger of overharvest. A study was carried out in 1985 to determine the present status of the resource relative to an earlier study in 1966; to determine present harvest rates and compare estimates of potential yield; and to determine management changes needed for commercial and sport fishermen. Oxygen, temperature and pH profiles were carried out, and test netting was conducted from July 22-26, 1985. Size and weight of fish species were compared to the 1964-66 study.

The Bio-food industry in 1987 : performances and outlook for 1988

Quebec : Gouvernement du Québec, Ministère de l'agriculture, des pêcheries et de l'alimentation, 1988. xi, 131 p. French ed. (*L'industrie bio-alimentaire...*) : 89-02774-2
CSI 66103.010. ISBN 2-551-06863-0
MICROLOG 89-02761 2 fiche

The document is divided into 6 chapters. The first chapter compares the performance of the agro-food sector with that of Quebec's economy as a whole, and discusses the major elements of farm revenues. The second chapter deals with farm production. It analyzes the international influences on the performance of the major agricultural sectors in Quebec in 1987. The next chapter outlines the various food product processing and distribution sectors. Chapter 4 specifically examines the fisheries sector and analyzes the economic situation of production and processing of fisheries products. Chapter 5 discusses the outlook for 1988 in the agro-food and fisheries sectors. The sixth and final chapter focuses on government policies and programs summarizing the principal areas in which the Department and its agencies were active over the past year.

MICROLOG 89-01946 1 fiche

The giant, or sea, scallop is of considerable economic importance in Atlantic North America, with Georges Bank providing the most productive fishery. However, only recently has the giant scallop been considered as a potential mariculture species in Canada. This report presents the results of testing of long-line suspension, weir stake suspension, benthic cage, and benthic relaying culture in the final grow-out stage. Economic questions to be answered include the need for a yield of high-priced, gourmet product for an established or newly established market; production capacity of the fishery supporting the established market would be unable to keep up with demand due to declining catches or increased demand; and the culture would be biologically feasible at production costs which allow the venture to be profitable.

Biological and species interaction survey of Pacific hake, sablefish, spiny dogfish and Pacific herring off the southwest coast of Vancouver Island, F/V Caledonian, August 12-25, 1986

by W. Shaw...et al. Nanaimo, B.C. : Dept. of Fisheries and Oceans, Biological Sciences Branch, Pacific Biological Station, 1989. iv, 134 p. : ill. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences : no. 2012) ISSN 0706-6473
MICROLOG 89-04371 2 fiche

This survey is a major component of the La Pérouse Project, designed to evaluate the influence of variations in both the physical and biological oceanography on fish populations utilizing the lower west coast of Vancouver Island. The first hake-herring interaction survey was conducted in 1985. The 1986 survey sampled major concentrations of hake and herring off the southwest coast of Vancouver Island, mapped their distribution, determined diets of major fish species, delineated the northern limit of hake distribution off Vancouver Island, and collected physical oceanographic data from the survey area. This report contains the biological and oceanographic data collected during the survey, conducted from August 12-25, 1986.

Biological survey of Montreal Lake, 1987

by J.J. Merkowsky and W.W. Sawchyn. Regina : Saskatchewan Parks, Recreation and Culture, Fisheries Branch, 1988. xii, 113 p. : ill., maps. Bibliogr. (Fisheries technical report : 88-4)
MICROLOG 89-05962 2 fiche

Montreal Lake, situated in the geographic center of Saskatchewan, was the subject of a limnological and fisheries investigation from May 26-August 27, 1987. The lake has a commercial fishery, as well as summer and winter sport fisheries. In anticipation of changes in fish management strategies as a result of increased demands, a baseline study was carried out to produce a bathymetric map, to obtain data on the physico-chemical characteristics, and to carry out a biological survey of the net-plankton, bottom fauna and fishes of the lake. Information gathered was used to estimate potential productivity and sustained yields, development and implement fishery utilization programs, and provide background information.

Biomass equations for six tree species in central Newfoundland

by M.B. Lavigne and R.S. Van Norstrand. St. John's : Government of Canada, Canadian Forestry Service, Newfoundland Forestry Centre, 1981. v, 51 p. : ill. Bibliogr.

(Information report ; N-X-199) ISSN 0704-7657

MICROLOG 89-00150 1 fiche

This report describes the 1st work in the province to produce reliable biomass prediction equations. Data was collected for black spruce, white spruce, balsam fir, larch, white birch, and trembling aspen in central Newfoundland. In the field, total fresh mass of above-ground components of selected trees were measured and samples of each component were collected. In the laboratory, fresh masses of samples were measured, oven-dried and measured again. Regression analyses were performed to provide equations for predicting oven-dried masses of components from measurements of easily obtained tree characteristics.

Bliss revisited : preliminary accounts of the Bliss Islands archaeology project, phase II

David W. Black, editor. Fredericton : Tourism, Recreation and Heritage, Provincial Parks and Historic Sites, Archaeological Services, 1988.

xi, 189 p. : ill. Bibliogr. (Manuscripts in archaeology ; 24E) ISBN 0-88838-339-8

MICROLOG 89-01345 3 fiche

During 1981, an archaeological survey of the Quoddy region, southern New Brunswick, was conducted, sites were recorded and surface collected. Seven sites were chosen for the Bliss Island project, aimed at interpreting the prehistory and human ecology of the sites. During the summer of 1983 further investigations were conducted. Phase I involved the test excavation of the Weir site, the Camp site, and the Ledge site and the further survey and recording of 5 historical sites. Phase II was conducted in 1986 and survey, testing and large scale excavations were conducted. This report presents a summary of Phase I research, a discussion of prehistoric shellfishing in the Quoddy region, an account of the field work undertaken, a summary of the prehistoric and historic chronology of the Bliss Islands as it is presently known, descriptions and analyses of several of the smaller sites on the islands, and a summary of some of the analytical work undertaken to date.

Bridge design for multi-presence of vehicles

by B. Bakht and L.G. Jaeger. Downsview, Ont. : Ministry of Transportation, Research and Development Branch, 1988. ii, 27 p. : ill. Bibliogr.
MICROLOG 89-03220 1 fiche

Current bridge design codes in North America (AASHTO (1984), Ontario (1983), and CSA (1987)), do not cater for the density of traffic except when dealing with loading on longer spans which can accommodate more than one vehicle in a lane. This paper provides a basis for making appropriate changes to the loading provisions of these codes so that the density of traffic can be accounted for in a logical and statistically defensible manner in the design or evaluation process. The paper also presents the appropriate revisions to those methods of analysis in such a way that the designer, while being able to see the effects of the proposed changes, is not required to perform any extra calculations.

Bridge testing : a surprise every time

by B. Bakht and L.G. Jaeger. Downsview, Ont. : Ministry of Transportation, Research and Development Branch, 1988. iii, 26 p. : ill. Bibliogr.
MICROLOG 89-03222 1 fiche

Experience with field testing of highway bridges in Ontario during recent years has shown that nearly every bridge has some aspect of behaviour which can escape the attention of even experienced bridge designers and analysts. This report lists some of the surprises encountered in bridge testing which may have a significant influence on their load carrying capacities. The behaviour of bridges with steel girders and concrete deck slabs, and of steel truss bridges are particularly addressed. Lessons drawn from tests on these bridges are summarized, and it is shown that in some cases the appearance of a bridge can be misleading with regards to its true load carrying capacity.

A Brief history of Lower Fort Garry

by D. Miquelon. Ottawa : Dept. of Indian Affairs and Northern Development, National and Historic Parks Branch, National Historic Sites Service, 1970. 187 p. : ill., maps. Bibliogr. (Canadian historic sites : occasional papers in archaeology and history ; no. 4) Bound with: *The Big house, Lower Fort Garry -- Industrial and agricultural activities at Lower Fort Garry -- The Sixth regiment of foot at Lower Fort Garry -- The Second battalion, Quebec Rifles, at Lower Fort Garry*
MICROLOG 89-00680 2 fiche

In 1831-32, the Hudson's Bay Company began the construction of a fur trade post on Lower Fort Garry, near Selkirk. One of the Company's major posts, this fort was involved in the economic development of the West. In 1965, the Department of Indian Affairs and Northern Development undertook the restoration of the Stone Fort to the height of its existence. This document traces the history of the fort from its beginnings to its establishment as a National Historic Site.

British smooth-bore artillery : a technological study to support identification, acquisitions, restoration, reproduction, and interpretation of artillery at National Historic Parks in Canada

by D. McConnell. Ottawa : Environment Canada, Canadian Parks Service, 1988. 595 p. : ill. Bibliogr. French ed. (*L'artillerie lisse britannique...*) : 89-03743/7. ISBN 0-660-12750-4
MICROLOG 89-03742 7 fiche

Under its mandate to interpret Canadian history to the public, Environment Canada - Parks initiated an extensive study of the technology of British ordnance c1710-1860s to aid in the re-creation of period settings at a number of British military sites in Canada, and to provide a manual for the reconstruction of pieces of artillery, their carriages and platforms. The study covers the production of ordnance, the history of the development and design of

various pieces (guns, mortars, howitzers, carronades), their carriages and platforms, and the development of gunpowder, cartridges, fuses, and projectiles.

Bronte Creek Provincial Park : draft revised management plan

Toronto : Ministry of Natural Resources, 1988. 29 p. : maps. Bibliogr. ISBN 0-7729-4824-0
MICROLOG 89-02149 1 fiche

Results of a review of the 1972 Park Master Plan establishing long term policy and setting direction for management and development for the next 10 years. The park was created in 1972 and put into regulation in July 1975, and is located within the Regional Municipality of Halton on the Burlington-Oakville boundary. This document presents a summary of significant issues, classification, goals and objectives, zoning, resource management policies, and operation and development policies. A summary of the public consultation is also included.

Bruce GS B commissioning biological study, year III, 1985 : aquatic studies

by D.W. Rodgers and H. Balesic. Toronto : Ontario Hydro, Research Division, 1988. vi, 100 p. Bibliogr. (Report : no. 87-306-K)
MICROLOG 89-02588 2 fiche

The Bruce Nuclear Generating Station B commissioning studies are part of a series of environmental studies at the site, which began with the Environmental Assessment incorporated in the proposal for Bruce B (1975) and will end with the Final Environmental Assessment projected for 1990. This report summarizes the results of aquatic studies in 1985, which consisted of monitoring of selected physical and chemical parameters of the water and sediment and sampling of larval, juvenile and adult fish in the vicinity.

Bruce NGS A emergency coolant injection recovery pumpsets vibration analysis

by N. Jagan, F. Perricone and W. Morgan. Toronto : Ontario Hydro, Research Division, 1988. ii, 115 p. : ill. Bibliogr. (Report : no. 87-301-K)
MICROLOG 89-02652 2 fiche

In December 1985, a vibration analysis of the 4 Emergency Coolant Injection Recovery Pumpsets indicated that high vibration levels at 1 x RPM measured on the motors were primarily due to a motor structural natural frequency near the operating speed amplifying vibration. It was recommended that an undamped dynamic vibration absorber be installed to detune the motor structural natural frequency. In June 1987, the 4 absorbers were installed, tuned and tested. This report discusses the performance of the absorbers in reducing the vibration levels.

The Brundtland Challenge and the Cost of Inaction

edited by Alex Davidson and Michael Dence. Halifax : The Institute for Research on Public Policy ; Ottawa : The Royal Society of Canada, 1988. xxxiii, 159 p. Bibliogr. A report of two workshops entitled: "The Cost of Inaction" and "The Brundtland Challenge". ISBN 0-88645-076-4

MICROLOG 89-01207 3 fiche

The Brundtland report, the report of the National Task Force on Environment and Development, and the concern of the public evidenced by the public opinion polls, has put environment strongly on the political agenda in Canada. This is a report on two workshops on environmental issues held in early 1988 in Hull and Waterloo. The report from the workshop in Hull discusses the cost of inaction on environmental issues. General themes include how to measure the cost, getting the cost issue on the political and public agenda, and what can and should be done, and by whom. The workshop in Waterloo builds on the Hull findings and discusses the implication for Canada of the Brundtland report. The underlying themes are the adequacy of the prevailing economic model, the institutional barriers to implementing the Brundtland agenda, and the information and research required to support sustainable development.

Buchanan TS soil investigation for 115 kV OH/ and U/G transmission line

by H.S. Radhakrishna. Toronto : Ontario Hydro, Research Division. 1989. 9 p. : ill. (Report : no. 89-16-K)

MICROLOG 89-04310 1 fiche

A soil investigation was carried out for the proposed anchor tower outside the station fence and a short stretch of U/G cable route within the station area. One borehole was put down to a depth of 11 m just outside the station fence and 2 shallow boreholes were put down inside the station along the proposed 115kV U/G XLPE cable route. The field work was performed from December 6-8, 1988 and the laboratory testing was completed on December 20, 1988. This report contains the results of field and laboratory test data with recommendations for the design of foundations for the anchor tower and thermal backfill for the underground cables.

Bud and shoot development in different seedling types of western hemlock during nursery growth

by C. O'Reilly and J.N. Owens. S.I. : Forest Resource Development Agreement, 1989. x, 81 p. : ill. Bibliogr. (FRDA report : 053) ISSN 0835-0752 ISBN 0-7726-0903-9

MICROLOG 89-04910 2 fiche

Study to investigate the effect of short- and long-day treatments under moisture stress or no stress conditions on shoot growth, morphology, bud development and cuticle and epicuticular waxes in greenhouse-grown western hemlock seedlings from 2 styroblock cavity sizes and to examine the influence of lift data on bud morphogenesis. Treatments other than cavity size were applied for 1 month beginning mid-July, with weekly measurements of shoot growth from early July until growth cessation. Buds were sampled at 1-4 week intervals from early July 1986 to mid-March 1987, bud development was followed, and the apices squashed to estimate mitotic index. Bud development was also studied in seedlings placed in cold storage in November and

January. After growth cessation, records were made of root collar diameter, height, numbers of branches and needles, and needle thickness. Cuticle thickness was measured in needle cyrostat cross sections and needle epicuticular waxes were studied using a scanning electron microscope.

Le Budget, le jeu derrière la structure : rapport sur l'analyse du processus budgétaire dans le réseau de la santé et des services sociaux du Québec remis à la Commission d'enquête sur la santé et les services sociaux

par C. Bégin, B. Labelle et F. Bouchard. Québec : Commission d'enquête sur les services de santé et les services sociaux, 1987. viii, 213 p. Bibliogr. (Recherche 28). ISBN 2-551-08474-1
MICROLOG 89-00903 3 fiche

Cette recherche propose deux lectures du processus budgétaire dans le réseau de la santé et des services sociaux: une lecture systémique cherchant à l'analyser dans ses dimensions logistiques et cybernétiques, une lecture stratégique cherchant à en reconstituer le construit organisationnel à partir du vécu et du discours des acteurs principaux qui s'y trouvent directement concernés. De plus, le rapport rappelle les événements marquants de la période 1970 à 1987 et présente une description factuelle du processus budgétaire tel qu'il est formellement défini par les lois, les règlements, les normes et les directives émanant de l'appareil étatique.

Building stone potential in eastern Ontario

by P.S. Lebaron...et al. Toronto : Ministry of Northern Development and Mines, Mines and Minerals Division, 1989. xvii, 539 p. : ill. Bibliogr. (Ontario Geological Survey open file report, 5706) ISBN 0-7729-5276-0
MICROLOG 89-06132 6 fiche

Final results of a multi-year study on the granite and marble building stone potential of eastern Ontario. In 1986, the reconnaissance survey was completed and samples were obtained for cutting and polishing from prospects considered to have the highest potential for development. The report contains background information on the building stone project and on the geology of the study area; gives a general introduction to various aspects

of the building stone industry, describing commodity definitions and uses, market trends and outlooks, building stone deposit criteria, quarry economics, and ASTM tests; and describes the current state of the industry in eastern Ontario, with the results of the 1985 and 1986 field work, providing evaluations of the areas examined and recommendations for exploration. Detailed reports on each site examined in 1986 are also included.

A Business opportunity and market study of value added paper manufacturing in the province of Alberta, vol. 1

Ekono Consultants Ltd. S.I. : Canada-Alberta Forest Resource Development Agreement, 1987. 200 p. ISBN 0-662-16609-4
MICROLOG 89-05237 3 fiche

The Government of Alberta desires a more efficient utilization of its fibre resources. One way to accomplish this is to establish, over the short-term, a value-added paper and/or paperboard manufacturing facility which would lead to the long-term development of a diversified forest products industry. This study determines whether there is a market for selected paper grades manufactured in Alberta, and whether or not such a facility could be cost effective enough to maintain and support a profitable business operation now and in the future.

C-14 removal from spent IX resins, phase I : laboratory evaluation of methods

by F.H. Chang. Toronto : Ontario Hydro, Research Division, 1988. iii, 22 p. : ill. Bibliogr. (Report ; no. 88-120-K)
MICROLOG 89-02560 1 fiche

In nuclear reactors, carbon-14 is formed mainly by neutron activation of oxygen-17 and nitrogen-14, and is a radioactive contaminant that should not be released to the environment. The bulk of C-14 production in CANDU reactors occurs in the moderator water and the primary coolant and is largely removed by ion exchangers in the respective purification circuits. The removal and isolation of C-14 from the bulk resin waste may provide economic and technical advantages for resin disposal, and also the potential for marketing it as a commercial source of C-14 isotope. A program was therefore initiated in 1987 to develop a process in which C-14 could be effectively removed from the spent resins. This report presents the first phase of the program, consisting of a survey of the previous studies and laboratory evaluation of the several selected spent resin treatment methods.

Calculation of the k-factors for the failure probabilities

by A.H.C. Chan and R. Sue. Toronto : Ontario Hydro, Research Division, 1988. 30 p. (Report ; no. 87-326-K)
MICROLOG 89-02608 1 fiche

Failure probabilities of various components in a nuclear generating station are important parameters for the safety evaluation. These probabilities are, in general, derived from their corresponding failure rates. The failure rates are usually estimated and therefore have a degree of uncertainty (they are random variables). Since the failure probabilities are also random variables, an uncertainty analysis is needed in a safety evaluation. This report derives the formulae to compute the medians and the k-factors of the failure probabilities. Since the computer code SEP used in the Darlington Probabilistic Safety Evaluation Project assumes the failure probabilities to be log-normally distributed, and this assumption is a

subject for debate, the assumption is tested via the Monte Carlo simulation technique.
EN ON PR PS SC

Calculation of the reduced second virial coefficient and its derivatives

by D.E.G. Jones. Ottawa : Canada Centre for Mineral and Energy Technology, Mining Research Laboratories, 1989. iii. 45 p. Bibliogr. (Report ; MRL 89-30(TR))
MICROLOG 89-05068 1 fiche

In an earlier report, an analytical expression for the reduced second virial coefficient was obtained and used to calculate B for the 12.0-6.0 potential function, with the results compared with values determined numerically. The numerical method was found to give reliable results and was subsequently used to determine B for the exp-6 potential function. B values can be used to determine the potential function parameters, ϵ/k and σ for a given equation of state used in the TIGER code, which is useful for estimating the explosion and detonation parameters for explosive substances and/or mixtures. It is necessary to have a reliable numerical technique to estimate ϵ/k and σ for use in this code. This report demonstrates numerical techniques for calculating B, B1 and B2. Tables of the most accurate values of B and B1 yet presented and the first values of B2 ever presented are given for the exp-6 function.

Canada and international grain markets : trends, policies and prospects

by C. Carter, A.F. McCalla and A. Schmitz.
Ottawa : Economic Council of Canada, 1989. vii, 107 p. : ill. Bibliogr. *French ed. (Le Canada et le marché...)* : 89-03662/2. ISBN
0-660-13095-5
MICROLOG 89-03661 2 fiche

Grains are Canada's largest agricultural export, comprising between 40 and 50 per cent of Canada's total agricultural exports. This study reviews the major changes that have taken place in world grain markets since 1965. It examines the international policy environment that will shape trade in wheat and coarse grains over coming years, and looks at how success or failure in the current GATT negotiations will affect Canada's position. Particular attention is paid to Canada's agricultural exports to Japan.

Canada Brick Quarry ground water survey : annual report 1987-88

by E. Quarshie. Toronto : Ontario Hydro, Research Division, 1988. i, 157 p. : ill. Bibliogr. (Report ; no. 88-262-K)
MICROLOG 89-05177 2 fiche

Lakeview Thermal Generating Station fly ash disposal at the Canada Brick Quarry began in December 1981, following the issuance of a Provisional Certificate by the Ontario Ministry of the Environment (MOE). The ash placement operation was completed as of December 1986, and final cover development for the quarry reclamation project is now in progress. A ground water monitoring program set by the MOE as one of the conditions for fly ash placement is still on-going. This report covers the analyses of ground water samples from September 1987 to September 1988. The analytical data reported includes previous ground water surveys as well as surveys carried out during the 1987-88 sampling year. Piezometric head measurements were carried out 4 times during the 1987-88 sampling year and are included.

Canada's forest industry : the next twenty years : prospects and priorities, VI : cost projections

prepared for Canadian Forestry Service ; written by Woodbridge, Reed and Associates. Vancouver, B.C. : Woodbridge, Reed and Associates, 1988. 41 p.
MICROLOG 89-03760 1 fiche

Over the last 10 years Canada's market share has fallen or has not grown as fast as that of other producers. This report looks at each of the key cost elements - fibre, labour, energy, distribution and transportation - and assesses Canada's present and likely future position to 2010. Comparisons are made to the United States, Brazil, Chile, Finland, the Iberian countries, Sweden and New Zealand. Costs for 1987 are used as a base, with 1995 and 2010 as medium and long-term. The analysis does not take into account capital or financing costs.

Canada-U.S. Free Trade : the regional impact

by A. Chapman and G. Goldstein. Ottawa : Library of Parliament, Research Branch,

1987. 26 p. Bibliogr. (Backgrounder : BP-171E) ISBN 0-660-12802-0
MICROLOG 89-05314 1 fiche

This study examines the probable impact of free trade on Canada and its various regions in light of recent trade theory and evidence. It discusses the regional and sectoral impact of free trade in general terms under both traditional trade theory and with recent alternative assumptions. It also suggests evidence to support the change to a new trade model, and presents results from three different free trade studies that incorporate the new assumptions of economies of scale and imperfect competition. Finally, it looks at the likely impact of a Canada-U.S. free trade arrangement on the individual regions of the country and on selected industrial sectors.

Canadian diesel fuel sulphur cost survey

RTM Engineering Ltd. Ottawa : Petroleum
Association for Conservation of the Canadian
Environment, 1988. 30 p. (PACE report ;
no. 88-3)
MICROLOG 89-00336 1 fiche

The Petroleum Association for Conservation of the Canadian Environment commissioned a survey of Canadian refineries to determine the cost impact of a possible reduction in the sulphur specification of highway diesel fuel from the current 0.5% normal maximum to the order of 0.05% weight percent maximum sulphur. An intermediate sulphur level of 0.15% weight has also been considered here, in addition to the 0.05% level, in order to

provide data on cost versus degree of sulphur reduction. A survey form was distributed to Canadian companies producing diesel fuels for Canadian markets, covering 27 plants in all, primarily refineries, but also one petrochemical plant and one oil sand upgrading plant. In all cases, responses were reviewed for consistency and completeness and discussed with producers as appropriate. Also included are estimations of capital and operating costs at two producing facilities.

MICROLOG 89-05089 2 fiche

Annual overview of the structure and performance of the commercial fisheries of Canada for 1984 and 1985, describing how the Canadian industry relates to world trade in fisheries products and to fish production in the other major fishing countries of the world. The review describes Canada's position in the world's fisheries, demand for fish products in Canada and the U.S., the relative importance of the fishing industry in comparison with other segments of the Canadian economy, and the participation of Canada and other nations in the fisheries of the northwest Atlantic and northeast Pacific. The review also describes the structure of landings and gross landings income to fishermen, production and gross revenue derived from Canadian fish products, employment of fishermen and plant workers, and number of vessels in Canadian fishing fleets, and exports and imports of fishery products by main countries.

Canadian occupational health standards : a discussion paper

by R. Sentes. Hamilton, Ont. : Canadian Centre for Occupational Health and Safety, 1988. 20 p. Bibliogr. ISBN 0-660-12514-5
MICROLOG 89-00349 1 fiche

Until the mid-1970s, the American Conference of Governmental Industrial Hygienists produced virtually all of Canada's guidelines and standards for hazardous substances. Since

then, a process of Canadianization has been going on, with an ongoing critical evaluation of standard setting processes carried out across Canada. This report discusses the question of how the Centre can facilitate the process, while simultaneously helping to ensure that all Canadians enjoy a healthy and safe working environment. The report begins with an historical overview of standard setting in Canada, then continues with the Centre's mandate for standard setting, definitions of standards, the potential implications of standard setting for the Centre and its constituents, and ends with a review of international standard setting processes, including the United States, the United Nations, Norway, and Sweden.

Capacitated vehicle routing on trees

by M. Labbé, G. Laporte and H. Mercure. Montreal : Université de Montréal, Centre de recherche sur les transports, 1989. 14 p. Bibliogr. (Publication : no. 644)
MICROLOG 89-05956 1 fiche

The capacitated vehicle routing problem on trees (TCVRP) consists of determining vehicle collection routes starting and ending at the depot such that the weight associated with any given vertex is collected by exactly one vehicle.

the sum of all weights collected by a vehicle does not exceed a specific value, and a linear combination of the number of vehicles used and of the total distance travelled by these vehicles is minimized. This paper presents lower bounds for the TCVRP based on the solutions of associated bin packing problems. A linear time heuristic (upper bound) procedure is then developed and a bound on its worst case performance is presented. These lower and upper bounds are then embedded in an enumerative algorithm. Numerical results follow.

Capture and husbandry of juvenile (0-year) atlantic mackerel *Scomber scombrus*

by D. D'Amours and J. Landry. Mont-Joli, Que. : Ministère des pêches et des océans, Direction des sciences biologiques, Institut Maurice-Lamontagne, 1989. vi, 11 p. Bibliogr. (Canadian technical report of fisheries and aquatic sciences : no. 1679) ISSN 0706-6457
MICROLOG 89-03111 1 fiche

The success of recruitment of fish is considered to be determined over all their life stages, although juveniles are often little studied in comparison with adults and larvae. This prevalence is marked in the case of the Atlantic mackerel. This report presents the results of a field study in the Gulf of St. Lawrence on the distribution of juvenile (0-year) Atlantic mackerel in a coastal environment, to document the use of near-shore habitat by 0-year fish, and to establish appropriate collection, sedation, and nursing techniques. The growth of wild and captive fish are also compared.

the Minister of State for Cariboo. Victoria : Minister of State for Cariboo, 1989. vi, 62 p. : ill. ISBN 0-7726-0924-1
MICROLOG 89-02971 2 fiche

The Cariboo Development Region covers an extensive area of north-central British Columbia, with forestry being the major manufacturing industry supporting 44 sawmills and related plants. The Region is evaluating the opportunity for using woodwaste as a fuel for thermal electric power generation and co-generation applications, since substantial amounts of woodwaste are produced in several major centres and appropriate disposal is a concern. This report presents the results of a study evaluating the feasibility of a woodwaste thermal plant at Williams Lake. The report reviews thermal plant technology, the supply of woodwaste, the marketability of the electric power generated, plant sites, environmental considerations, alternative processes, capital cost and operating cost estimates, financial analysis, and a development strategy. A glossary of terms and more detailed figures are given in appendices.

Catenary deflection under wind and ice loading

prepared by Canadian Pacific Consulting Services Ltd. and Morrison Hershfield Ltd. Montreal : Transportation Development Centre, 1986. xi, 84 p. ill Bibliogr. TP 8046E.
MICROLOG 89-06041 2 fiche

A full-scale catenary test section, typical of a 25-50 kV, 60Hz main line heavy haul freight railway, was installed on a wind-exposed site on Prince Edward Island. Ultrasonic ranging techniques were used for measuring horizontal and vertical dynamic deflections of the contact wire. Transducer outputs were automatically recorded by an on-site microcomputer for 5 months. Results are depicted as graphical plots of mean and peak deflections against the mean wind speed normal to the contact wire. No usable ice loading data were obtained. The report includes a microcomputer software program to predict wind-induced deflections of simple catenary overhead contact systems of the level or sagged contact type. Recommendations are made for values of wire drag coefficient, mean wind speed, and ice accretion to be used in the program.

A Causal modelling approach of analyzing statistical interaction : ethnic differentials in the timing of early family formation in Sri Lanka and Malaysia

by W.-J.J. Yeung. Edmonton : University of Alberta, Dept. of Sociology, 1989. 63 p. : ill. Bibliogr. (Research discussion paper ; no. 57) ISSN 0317-2473
MICROLOG 89-04081 1 fiche

This paper demonstrates the utility of LISREL (Linear Structural Relationship) analysis to estimate nonadditive relationships among variables. It briefly reviews statistical methods commonly used to examine research problems involving interaction effects in sociological literature, noting methodological problems. Through a substantive study of the cultural and structural determinants of the timing of early family formation in the major ethnic groups in Malaysia and Sri Lanka, it demonstrates how the LISREL multiple-sample analysis can be useful in specifying and estimating the joint effects of various independent variables. Finally, it discusses the strength and limitations of the LISREL multiple-sample analysis in comparison to the other commonly used methods for analyzing interaction effects.

Cedar Lake fish stock assessment program, 1980

by W. Lysack. Winnipeg : Manitoba Dept. of Natural Resources, Fisheries Branch, 1980. iv, 41 p. : ill. Bibliogr. (Manuscript report ; no. 80-22)
MICROLOG 89-01578 1 fiche

Results of the 2nd annual fish stock assessment program on Cedar Lake, initiated in response to continuing requests for quota increases from commercial fishermen. The study determined changes in cohort and age class strength since 1979, estimated mortality rates; described maturity and growth regimes, determined the age composition, mean ages, and mortality rates of commercially caught walleyes and whitefish, as well as the changes, if any, which occurred in fish stocks since 1979; and provided a list of fish species presently inhabiting Cedar Lake and estimated species proportions. Experimental sampling was restricted to one period in early summer and commercial samples were collected once in June.

Central Area Monitoring Program : Annual report 1987-88

Metropolitan Toronto (Ont.). Planning Dept. Toronto : The Dept., 1988. iii, 65 p. : ill. MICROLOG 89-05672 1 fiche

This annual report documents a number of key Central Area variables such as transportation system usage, travel characteristics, office floor space, vacancy rates, population, labour force, and employment. The area is bounded by Bathurst Street on the west, by the C.P. North Toronto rail line on the north, by the Moore Park Ravine and Bayview Avenue Extension on the east, and by the waterfront on the south. The information falls into two main categories: that collected on an ongoing basis such as cordon counts and employment data, and periodic or one-time data collection efforts such as the quinquennial Census and specific travel behaviour surveys.

A CERCHAR abrasivity test program methodology developed for the Sydney Coalfield, N.S.

by G.R. Corbett and T.R.C. Aston. Ottawa : Canada Centre for Mineral and Energy Technology, Coal Research Laboratories, 1988. v. 14 p. ill. Bibliogr. (Report ; CRL 88-70(TR))
MICROLOG 89-02628 1 fiche

Rock cuttability can be predicted by means of a laboratory test developed by CERCHAR of France, which tests hardness and abrasivity on samples of the stone to be bored or cut, thereby predicting the performance of the rock cutting equipment used. In 1987, a multi-year research program was established to investigate rock cuttability and machine performance in the Sydney Coalfield of Nova Scotia. The initial objectives of the program were to compile a rock abrasivity/hardness data base and index system, developed from the laboratory testing of field samples. This report examines the test methodology and data reporting procedures being developed for the abrasivity testing program.

Changes in the fisheries of Atlantic Canada associated with global increases in atmospheric carbon dioxide : a preliminary report

by K.T. Frank...et al. St. Andrews, N.B. : Dept. of Fisheries and Oceans, Marine Fish Division, Biological Sciences Branch, Biological Station, 1988. vi, 52 p. : ill. Bibliogr. (Canadian technical report of fisheries and aquatic sciences ; no. 1652) ISSN 0706-6457
MICROLOG 89-05352 1 fiche

A working group of fisheries specialists was assembled to consider the consequences for the fisheries of Atlantic Canada of a change in oceanographic conditions induced by a global increase in atmospheric carbon dioxide. The group used the predicted qualitative changes in the physical oceanographic features and properties of the continental shelf waters off eastern Canada from Wright et al. (1986) to speculate on the impact that such changes might have on the location, composition, and recruitment of fish populations inhabiting the Gulf of Maine to the Labrador Shelf.

Chaparral area structure plan and supporting information

Calgary, Alta. : Calgary Planning & Building Dept., 1988. i, 27 p. : maps.
MICROLOG 89-01971 1 fiche

Chaparral is an area of approximately 1 square mile, annexed in 1981, and bounded by the city limits from the east, south, and west. The future planning of the lands in the M.D. of Foothills #31 is considered in this plan, although no land use policies are proposed for these areas. The area is intended as a residential community. This report presents the planning concepts and planning policies for the area, including residential and commercial areas, open space, roads, L.R.T., bus service, restricted development area, utilities, impact of the landfill site, and development approvals.

Characteristic X-ray mapping as an aid to SEM fractography

by Casault B.R....et al. Ottawa : Canada Centre for Mineral and Energy Technology, Metals Technology Laboratories, 1989. 11 p. : ill. Bibliogr. (Report : MTL 89-7(TR))
MICROLOG 89-06220 1 fiche

In fractography, there is always a problem relating fractures on the fracture surface to the underlying structure. If conventional metallography is used, the fracture surface is destroyed in revealing the structure underneath, and correlations are difficult to make. This paper gives the results of experiments using X-ray mapping to reveal structures of differing chemistry in a scanning electron microscope equipped with an X-ray energy dispersive analysis system, if the alloy has distinct phases easily resolvable in the SEM, if the alloy shows strong partitioning of certain elements between the matrix and a second phase, and if the strongly partitioning elements are not too far apart in the periodic table.

Characteristics of sport fish populations in six salmonid lakes of Gros Morne National Park, Newfoundland

by P.M. Ryan and J.J. Kerekes. St. John's : Dept. of Fisheries and Oceans, Gulf Region, Science Branch, 1988. vi, 172 p. : ill. (Canadian technical report of fisheries and aquatic sciences ; no. 1636) ISSN 0706-6457
MICROLOG 89-02698 2 fiche

Description of the characteristics of sport fish populations in 6 experimentally fished salmonid lakes of Gros Morne National Park, Newfoundland. The study was initiated in 1975 to fulfill one of the requirements of a memorandum of agreement between the federal and provincial governments for the establishment of the park. The study was conducted from 1975-80 and describes the analysis of data from the individual lakes for evidence of any changes in the populations

resulting from the experimental fishery, and presents an examination of variations in population characteristics among the study lakes so that factors influencing these variations could be identified.

Characterization of cold-wet conditions

by R.M. Crow and M.M. Dewar. Ottawa : Defence Research Establishment Ottawa, 1988. iii, 78 p. : ill. Bibliogr. (Technical note ; 88-23)

MICROLOG 89-00534 1 fiche

A recent literature search found no formal definition of cold-wet climate conditions, but rather attempts to explain why cold-wet conditions make one feel so cold. Further, no standard definition of cold-wet or cold-damp was found. In order to determine whether or not cold-wet can be characterized, weather data for 12 Canadian centres as well as for Baden-Soellingen, Germany were analysed. This paper gives the results of that study.

The Characterization of heavy water upgrader deposits

by F.R. Greening. Toronto : Ontario Hydro, Research Division, 1988. 27 p. : ill. (Report ; no. 88-250-K)

MICROLOG 89-04586 1 fiche

Heavy water upgraders are operated at the Pickering and Bruce nuclear generating stations to maintain the isotopic purity of the heavy water used in the moderator and heat transport systems. After an initial period of satisfactory operation, the upgraders eventually exhibit a loss of upgrading capacity and must be taken out of service for the removal of deposits which cause inadequate flow through the distributors. The samples, including reboiler residues, Sulzer packing and distributor sections, were investigated by optical microscopy, X-ray fluorescence and diffraction and Auger electron analysis. This report presents the results of the analysis.

The Characterization of non processable low level radioactive waste

by J.P. Krasznai. Toronto : Ontario Hydro, Research Division, 1988. ii, 9 p. Bibliogr. (Report ; no. 88-33-K)

MICROLOG 89-02595 1 fiche

Over the last 3 years, a program was conducted to characterize low and intermediate level radioactive waste streams arising from routine reactor operations as well as large scale maintenance activities. This report details the characterization of Type I non-processable waste (less than 200 mR/h) arising from routine operations and maintenance activities associated with a 10 GW(e) CANDU nuclear

system to provide data for the evaluation of new volume reduction technologies such as supercompaction. Each bag was weighed, its moisture or other free liquid (such as oil) presence determined, and the contents of the bags visually examined to assess their physical components. Contact radiation fields on each side of the bin was measured and gamma scanned. A waste bag of known radiochemical composition was used to calibrate the spectrometer system, thus allowing conversion of peak areas to radionuclide activity.

Characterization of solid wastes from limestone and related sorbent injection processes for acid gas control : physical and engineering properties

by H.M. Johnston and K.E. Eagleson. Toronto : Ontario Hydro, Research Division, 1989. ii, 20 p. Bibliogr. (Report ; no. 88-305-K)

MICROLOG 89-04448 1 fiche

As part of Ontario Hydro's Acid Gas Control Program, furnace sorbent injection (FSI or LIF) is a candidate technology now considered for installation to control acid gas emissions from thermal generating stations. Furnace injection is a commercially unproven process in which the sorbent (limestone or hydrated lime) is injected directly into the furnace of a coal-fired boiler. The FSI reaction by-products, consisting of fly ash, sulphation by-products and unreacted sorbent, is subsequently removed from the flue gas stream using fabric filters or electrostatic precipitators located downstream of the boiler. The volume of FSI by-product is significantly more than from other flue gas desulphurization processes. This report presents the results of a study to determine the engineering/physical properties of FSI waste.

Characterization of two ore samples collected from Nova Scotia off-shore sea bed

by M.A. Cristovici, G.W. Leigh and R.B. Campbell. Ottawa : Canada Centre for Mineral and Energy Technology, Mineral Sciences Laboratories, 1989. ii, 10 p. (Report ; MSL 89-56(IR))

MICROLOG 89-05072 1 fiche

Early in 1988, Gedoro Mining agreed with the provincial and federal governments on general terms for a cooperative venture to identify the potential for gold mining off-shore of Nova Scotia. On the basis of seismic surveys, East Point Ledge and Blue Rocks were identified as areas of possible gold concentration. These areas were sampled during the summer of 1988, and the samples were analyzed for gold, silver and other elements of possible economic value. Sieve analysis and assays on sieve fractions were carried out to evaluate the gold and silver distribution in the ore samples.

Chemical characteristics of selected rivers in Nova Scotia during 1982

by G.J. Farmer, D.K. MacPhail and D. Ashfield. Halifax : Dept. of Fisheries and Oceans, Biological Sciences, Enhancement, Culture and Anadromous Fisheries Division, 1988. ix, 44 p. : maps. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences ; no. 1961) ISSN 0706-6473
MICROLOG 89-04695 1 fiche

Hatchery-reared juvenile salmon are released in many rivers to enhance existing salmon stocks, leading to the necessity of collecting information on the chemical characteristics of the major tributaries to these river systems to facilitate enhancement planning and to enable the selection of suitable salmon release sites. The chemical characteristics of the various river systems were related to their associated bedrock geology and soil types and to the abundance of native Atlantic salmon as indicated by angling catch and effort information. Water samples were collected from 15 river systems during the late-winter to early-spring of 1982 and again during the following summer to early fall. Nine smaller rivers which had once supported salmon were also included in the sampling. Analysis was done for pH, total hardness, total alkalinity, chloride and sulfate levels, specific conductance, apparent colour, calcium, magnesium, and aluminum.

China's open door and shipping

by G.K. Sletmo and S. Holste. Montreal : Université de Montréal, Centre de recherche sur les transports, 1989. 20 p. Bibliogr. (Publication , no. 617)
MICROLOG 89-03738 1 fiche

This paper reviews the development of the international merchant marine activities of the People's Republic of China, and relates that country's maritime ambitions to the structure of its foreign trade. Elements reviewed include China's "Open Door" policy, its main trade partners and a comparison of China's fleet expansion with communist bloc countries and South East Asian shipping centres. The composition of China's merchant marine is discussed with particular attention to the great concentration of this fleet in general cargo markets. The role of China's maritime State enterprises is identified and their impact on the competitiveness of international shipping markets is discussed.

Chinook salmon escapement estimation on the Campbell and Quinsam Rivers in 1984 : accuracy and precision of mark/recapture techniques using tagged salmon carcasses

by T.F. Sharrow, T.M. Webb and D.T. Lightly. Nanaimo, B.C. : Dept. of Fisheries and Oceans, Fisheries Branch, South Coast Division, 1986. viii, 52 p. Bibliogr. (Canadian technical report of fisheries and aquatic sciences ; no. 1507) ISSN 0706-6457
MICROLOG 89-05761 1 fiche

The chinook escapement to the Campbell and Quinsam Rivers in 1984 was estimated by using a simple carcass tagging method. Marked carcasses from the Quinsam hatchery were released on 2 occasions in each river and the proportion of these carcasses recovered in the dead pitch was used as an index of the effectiveness of the dead pitch. In this report, the theory behind the use of carcass tagging is examined and the expected levels of precision and the potentials for bias are assessed. Two different estimation methods are examined, one based on a Petersen approach and the other on the Schaefer method, and the need for corrections for differences in the sex ratio between live sampling and dead sampling is discussed.

Cigar ultrasonic inspection of CRNL/CANDEV pressure tube DB3 containing intentional defects

by B.H. Muth and M.D.C. Moles. Toronto : Ontario Hydro, Research Division, 1988. 28 p. : ill. Bibliogr. (Report : no. 88-27-K)
MICROLOG 89-02599 1 fiche

CANDEV funded a project at Chalk River Nuclear Laboratories (CRNL) to evaluate the defect detection capabilities of pre-service (manufacturing) inspections. This project required the manufacture of pressure tubes with deliberately implanted defects of various depths, lengths and orientations. Tube DB3 is the third such tube, and contains about 50 axially-oriented defects. DB3 was initially inspected by CRNL using the old manufacturing inspection procedure, then by Bristol Aerospace using a recently developed procedure and equipment (BAL). This report describes inspection of the tube using CIGAR (Channel Inspection and Gauging Apparatus for Reactors) in-service inspection equipment and procedures in the laboratory. The results were compared with those obtained by the other methods.

Circuit breaker diagnostics by vibration monitoring

by D.L. Mader. Toronto : Ontario Hydro, Research Division, 1988. 14 p. : ill. Bibliogr. (Report : no. 88-161-K)
MICROLOG 89-04320 1 fiche

The mechanical condition of circuit breakers could be revealed by monitoring their vibration during operation. Excessive bearing friction and loose parts were detected by such monitoring in an Australian research program, and the technique does not require electrical isolation since the vibration sensor is attached to the outside of the breaker shell. Ontario Hydro is currently assessing the feasibility of the vibration monitoring approach to circuit breaker diagnosis, with the first step being the development of a data acquisition and recording system based on a personal computer so that data analysis could follow. In an exploratory experiment, a vibration pickup sensor was attached to a breaker at Leaside transformer station and vibration waveforms were recorded for several tripping and reclosing operations. This was done on 2 separate occasions during a scheduled maintenance outage; once before rehabilitation work and once after. The report also discusses analysis methods.

Climate change in British Columbia : implications for the forest sector : developing a framework for response

compiled by ESSA, Environmental and Social Systems Analysts Ltd.; edited by D.L. Spittlehouse and D.F.W. Pollard. S.I. : Forest Resource Development Agreement, 1989. vii, 55 p. : ill. Bibliogr. (FRDA report ; 075)

ISSN 0835-0752 ISBN 0-662-16986-7
MICROLOG 89-06181 1 fiche

A meeting to discuss climate change and its implications for research and communications within the forest sector in British Columbia was convened in October 1988. The main issues were identified and used to establish a general framework for assessment purposes. A large number of gaps in information and understanding were identified, and direction and priorities for future research were given. A second discussion, seeded by a hypothetical scenario calling for recommended management practice and the outline of a 10-year research program, revealed basic needs for more definite climate scenarios, a clarification of objectives for forestry in Canada under a changing climate, a better understanding of biological requirements and future values of the resource, an appropriate means to enhance public awareness of the issue, and a scheme to ensure the effective use of funds and available research capability.

Climate warming and Canada's comparative position in agriculture : a summary of Land Evaluation Group report : implications of climatic warming for Canada's comparative position in agricultural production and trade

by B. Smit. Ottawa : Environment Canada, 1989. 9, 10 p. (Climate change digest : CCD 89-01) *Bilingue (Réchauffement climatique et...)*. ISSN 0835-3980 ISBN 0-662-56668-8
MICROLOG 89-05472 1 fiche

Results of a comparative analysis undertaken to assess the implications of climate warming for the competitive position of Canadian agriculture. Impacts of an altered climate on Canadian production and trade opportunities for selected crops are assessed relative to impacts in other regions of the world. The investigation employs previous studies which have examined the impacts of climate warming on agriculture together with information on current crop product and trade patterns. Comparative assessments are conducted independently for wheat, grain corn, barley, oats and soybeans for Canada and rice in the international marketplace. Changes in opportunities for production and trade of these crops in Canada are assessed relative to changes occurring in the rest of North and Central America, South America, Europe, Africa, the USSR, Asia, and Oceania.

Cluster listing check program for the redesigned LFS sample

by M. Joncas. Ottawa : Statistics Canada, Methodology Branch, Census and Household Survey Methods Division, 1985. 40 p. CSI 01100.227.
MICROLOG 89-02469 1 fiche

The 1981 Post Censal Redesign of the LFS lead to a complete re-specification of the sample. The new sample was introduced between the months of October 1984 and

March 1985, during which period lists of dwellings had to be created in the field and data captured for over 11,000 new clusters. The conditions under which the various operations involved took place gave rise to a program whose purpose is to check the quality of work done. This document presents this program and provides cluster listing check procedures

CNG compressor operations monitoring

B.C. Research, Division of Applied Physics and Engineering. Ottawa : Energy, Mines and Resources Canada, Transportation Energy, 1987. iv, 26 p.
MICROLOG 89-05371 1 fiche

Operating performance characteristics of 7 (6 different types) compressed natural gas compressors used in commercial refuelling stations were monitored over 2 years. The output flow capacity for the compressors ranged from 0.7-9.62 cubic metres/min. Operating data was collected for the total volume of natural gas used, total hours of operation, and electrical energy consumption. From this data, average flow rates were determined as well as the electrical energy consumption per unit volume of natural gas compressed.

CNG engine durability test

Ottawa : Energy, Mines and Resources Canada, Transportation Energy, 1986. 88 p. : ill. MICROLOG 89-05383 1 fiche

Canada is taking a leading role in the introduction of compressed natural gas (CNG) as a fuel for automotive application, although its initial introduction is through the retrofit market. Some problems were experienced in these early applications in the form of excessive wear, cold start problems, and poor fuel economy. Since no systematic data were available, the federal government began a program to evaluate a typical automotive gasoline fuelled S.I. engine on natural gas, using modified cylinder heads. Fuel system performance and optimization of spark timing were not part of this program. The test engine was a 5.7 L V8 spark-ignited gasoline engine supplied by GM of Canada Ltd. in a fully dressed and ready-to-run condition (including ignition system, carburettor, air cleaner, and alternator). A commercially available NG fuel system suitable for this engine was installed and adjusted. Data on valve recess measured every 25 hours of engine operation, compression checks performed every 8-10 hours, and monitoring of engine speed and load, intake and exhaust temperatures, oil and coolant temperature and combustion air temperature were collected.

Co-processing studies of Alberta subbituminous coals

Edmonton : Alberta Energy, Scientific and Engineering Services and Research Division, 1988. 14 p. : ill. Bibliogr. ISBN 0-86499-579-2
MICROLOG 89-01060 1 fiche

Summaries of projects to produce liquid fuels from mixtures of coal and bitumen, including the initial laboratory investigations to rank the coals and indicate those process conditions which would be most suitable to each region. A feasibility study to assess several process options for producing synthetic crude oil, followed by a feasibility study of a coal/heavy oil hydrogenation plant using a modified Saarbergwerke AG coal liquefaction process was undertaken. Descriptions are also given of a 4-year process development program to test both the PYROSOL and CCLC processes in a continuous bench-scale unit and an automated pilot-scale unit.

Coal freezing problems in railroad cars : a state-of-the-art-review

by P.H. Oosthuizen. Kingston, Ont. : Queen's University, 1988. viii, 285 p. : ill. Bibliogr. CANMET contract: 89003-01-SG
MICROLOG 89-02423 4 fiche

When coal is transported in rail cars at low ambient temperatures the moisture in the coal tends to freeze causing the coal particles to bond together and be bonded to the surface of the rail car. This makes it difficult to discharge the coal from the cars. This report reviews over 200 publications on the coal freezing problem. This information was supplemented by telephone interviews with a number of persons involved in the Canadian coal industry. A set of applied research projects are recommended.

Coal preparation research in Alberta

Edmonton : Alberta Energy, Scientific and Engineering Services and Research Division ; Office of Coal Research & Technology, 1989. 22 p. : ill. Bibliogr. ISBN 0-86499-629-2 MICROLOG 89-06278 1 fiche

In the early 1980s, the Coal Mining Research Company began a coal preparation research program to address several problems posed by the characteristics of western Canadian subbituminous and bituminous thermal coals. Because moisture is the principal inert substance associated with lower-rank coals, and conventional washing processes can increase the water content, it was decided to focus initially on thermal drying of raw coal, followed by dry cleaning of the product. This publication summarizes the research done in this area, including coal moisture measurements, drying characteristics of western Canadian coals, pilot-scale drying studies, dry cleaning, costs and benefits of alternative coal preparation schemes, properties of thermally dried coal, numerical analysis of process yield losses, washery optimization, alternative coal comminution methods, coal ash monitoring, and moisture and ash on-stream analysers. The Column generation principle and the airline crew scheduling problem -- Rev.

by T.G. Crainic and J.-M. Rousseau. Montréal : Université de Montréal, Centre de recherche sur les transports, 1986. 27 p. Bibliogr. (Publication : no. 291) (Publication : no. 22-86) (Publication : no. 474)
MICROLOG 89-00011 1 fiche

The generation and selection of a good set of pairings is a complex, costly and very central part of the airline crew scheduling process. This paper presents an efficient approach to solving this problem, based on column generation techniques and reduced costs manipulation. The classical set covering formulation of the crew scheduling problem is first presented. The algorithm and its justifications are then given.

Combustion characteristics of Canadian coals, vol. 1

by K.M. Tait...et al. Ottawa : Energy, Mines and Resources Canada, Canada Centre for Mineral and Energy Technology, 1989. v. 163 p. (CANMET report ; no. 87-9E) ISSN 0707-5196 ISBN 0-660-13260-5
MICROLOG 89-05062 2 fiche

Summaries of the results of coal and solid fuel combustion evaluations in a pulverized-coal-fired research boiler were compiled for easy reference by utilities, engineers, consultants, industrial users, coal producers, and fuel buyers. Volume 1 contains 21 summaries of

key data from trials conducted on 15 Canadian fuels between 1972 and 1982. Volume 2, now in preparation, will include 12 additional coals evaluated in 1981 and 1982. This volume describes the derivation of the alphanumeric codes assigned to the fuels; outlines the test procedures used in the combustion trials; cross references the summary to the original divisional report title, author and number; and lists the fuels alphabetically and cross references them to their related summary and report numbers.

Combustion enhancement by induced Rayleigh instability : final report

British Columbia Research Council. Vancouver, B.C. : The Council, 1988. 37 p. : ill. Bibliogr. At head of title: BC Research Report. CANMET contract: 69061-01-SZ.
MICROLOG 89-01723 1 fiche

Investigation of the practicality of improving combustion efficiency of a domestic oil furnace by an electrostatic charge imposed on the fuel droplets. A number of modifications to the furnace air circulation, electrical, fuel delivery, and burner systems were necessary to adapt the burner unit for charging of the oil while maintaining its structural integrity and gas flow characteristics. A test to ensure proper function of the furnace was carried out after each modification.

Come-By-Chance refinery : site remediation

Acres International Ltd. ; for Newfoundland and Labrador Dept. of Environment. St. John's : Acres International, 1987. 165 p. : ill.
MICROLOG 89-02740 2 fiche

Results of a hydrogeological investigation designed to examine three previously identified areas of possible contamination in the general vicinity of the Come-by-Chance oil refinery in Newfoundland. The study was commissioned by the Government of Newfoundland and Labrador Department of Environment and was carried out from May-September, 1987, concurrent with the recommissioning of the refinery under new ownership. For each of the 3 sites, the study examined the extent of the contamination in the soil and groundwater and assessed its impact on the environment. Based on these results, a program of remedial cleanup measures was recommended.

Commission of Inquiry on Remuneration of Elected Provincial Officials : report

Nova Scotia. Commission of Inquiry on Remuneration of Elected Provincial Officials. Halifax : The Commission, 1988. 96 p.
Bibliogr.
MICROLOG 89-01316 2 fiche

The Commissioners' Report is divided into two sections: recommendations of the Commission and proposals, which generally deal with matters that have been raised with the Commissioners but with respect to which they have no clear mandate to decide. It covers background considerations on indemnities; allowances and salaries; remuneration for M.L.A.'s; administration and support, services and facilities for the work of private members and of caucus offices; support for leaders of opposition parties; salaries of members holding office and expenses of members of the Executive Council; legislative committees and facilities supporting the House; and salaries for officers of the House.

Commissioning and use of the minimum ignition temperature apparatus for dust clouds

by K.J. Mintz and K.J. Judge. Ottawa : Canada Centre for Mineral and Energy Technology, Mining Research Laboratories, 1988. iv, 27 p. : ill. Bibliogr. (Report ; MRL 88-55(TR))
MICROLOG 89-04600 1 fiche

The minimum ignition temperature of dust clouds is one of the basic parameters of dust explosions and is defined as the lowest temperature at which ignition of a dust cloud of a given material can occur. The standard apparatus used for this measurement is the Godbert-Greenwald furnace. This report fully describes this equipment, records the improvements that have been made, determines how the various experimental variables can affect the results, and sets a procedure to be followed for routine testing.

Commissioning of the new larger-scale flammability apparatus for brattice cloth

by K.J. Mintz...et al. Ottawa : Canada Centre for Mineral and Energy Technology, Mining Research Laboratories, 1989. iii, 14 p. Bibliogr. (Report ; MRL 89-31(TR))
MICROLOG 89-04476 1 fiche

Ventilation tubing and brattice cloth are often made of polymeric materials, which are potential sources of spreading a fire once ignited. Therefore, the use of fire-retardant materials is often required. This report describes a series of tests carried out using the United States Mine Safety and Health Administration's standardized small-scale flammability tester, built as a replacement for the existing small-scale flame test used currently for certification of brattice cloth by Energy, Mines and Resources Canada. Tests were carried out on 4 different materials for evaluation. A videotape of the tests was made.

The Common eider *Somateria mollissima sedentaria* of eastern Hudson Bay : a survey of nest colonies and Inuit ecological knowledge

by D.J. Nakashima and D.J. Murray. Ottawa : Environmental Studies Research Funds, 1988. xxiv, 174 p. : ill. Bibliogr. (Environmental Studies Research Funds report ; no. 102) ISBN 0-921652-02-X
MICROLOG 89-02451 3 fiche

The Hudson Bay eider is one of the least known subspecies of the common eider. Prior to the present study, no reliable estimates of breeding population size could be produced, as no systematic and large-scale ground surveys of nest colonies had been done. In response to the threat posed by oil exploration in central Hudson Bay, this study was designed to provide information on the numbers, breeding distribution and ecology of common eiders in the eastern part of the Bay. Seven subregions were selected for intensive ground surveys for Part I of the study. Data on Hudson Bay eider ecology were collected during 134 hours of semi-directive interviews with 41 individuals from the communities of Sanikiluaq, N.W.T., and Inukjuak and Kuujuarapik, northern Quebec. Extensive information was compiled on eider taxonomy, biogeography, behaviour, diet, life history and breeding, and wintering ecology.

Community-initiated health and social services

by E. Shragge and T. Letourneau. Québec Commission d'enquête sur les services de santé et les services sociaux. 1987. 70 p. Bibliogr. (Synthèse critique . 7) ISBN 2-551-08453-9
MICROLOG 89-00914 1 fiche

This position paper describes the emergence of a "new solidarity" and mutuality that developed in working-class neighbourhoods, among local citizens, and in particular among youths and women, in the social movements of the 1960s and 1970s. The paper argues that alternative social service and health agencies provide an innovative, flexible service to their respective communities. It sets out both some definitions of the alternative community agencies and debates, from a feminist perspective, the nature of community care and voluntarism. It describes the historical context in which the alternative agencies developed, and summarizes case studies of five alternative agencies. Finally, it examines the issues of funding and autonomy and the two-sided nature of state funding, and concludes with a summary and recommendations.

Comparative evaluation of mine-shaft wire-rope NDT instruments : a search for, and analysis of background information : contribution to the Canada-USBM-Ontario MOL joint R&D program

by L.B. Geller, J.E. Udd and E.W. Mitchell. Ottawa : Canada Centre for Mineral and Energy Technology, Mining Research Laboratories, 1988. v, 139 p. (Report ; MRL 88-78(INT))
MICROLOG 89-05066 2 fiche

Although in situ non-destructive testing (NDT) of mine-shaft wire-ropes with electromagnetic (EM) type instruments has been practiced in Canada for several decades, relatively little has been published about the extensive test results obtained. This report was written to make this information more readily available. The report is based almost exclusively on the comprehensive databank accumulated by the Ontario Ministry of Labour's rope testing laboratory in Toronto. The maximum breaking strength losses at the time of a rope's retirement as obtained by NDT measurements with EM instruments and by destructive testing are compared. The report also presents the relevant regulatory details of a range of mining acts, and the size and construction details of mine-shaft wire-ropes used in a number of Canadian provinces.

A Comparative field study of calcium magnesium acetate and rock salt during the winters of 1986-87 and 1987-88

by D.G. Manning and L.W. Crowder. Downsview, Ont. : Ministry of Transportation, Research and Development Branch, 1988. ii, 50 p. Bibliogr.
MICROLOG 89-03147 1 fiche

The field study was undertaken during the winters of 1986-87 and 1987-88 to compare the performance of calcium magnesium acetate (CMA) and rock salt as deicing chemicals. The study included a determination of the deicing effectiveness, and the handling and storage characteristics of the two chemicals. The CMA was applied to a section of freeway and the adjacent sections of service roads near Beamsville, Ontario. The adjoining sections of freeway and service roads served as control sections. The CMA and salt were applied at specified rates and the frequency was dictated by the road conditions. The condition of the test sections was recorded by

independent monitors at 1-hour intervals during all winter storms. A further section of service road was used to investigate different application rates of CMA.

A Comparison of spot, transect, and plot methods for measuring the impact of forest pest control strategies on forest songbirds

by R.L. Millikin. Sault Ste. Marie, Ont. : Government of Canada, Canadian Forestry Service, Forest Pest Management Institute, 1988. i, 83 p. : ill. Bibliogr. (Information report ; FPM-X-83) ISSN 0833-5540 ISBN 0-662-16453-9
MICROLOG 89-00761 1 fiche

To develop a program to determine the effects of spraying on forest songbirds, existing breeding bird census techniques were modified. As most spray programs occur in late spring to early summer, the populations of breeding birds as well as nestlings and fledglings were monitored. Plot, transect, and spot censuses were used on one 4 ha. plot to compare the merits and uses of each. The plot method was used as the standard by which to compare all other methods. The basis of analysis was the number of territories recorded. All studies were conducted at Wawa, Ontario in 1979, except for the program involving consecutive spot censuses on one day, which was conducted in Searchmont, Ontario in 1980.

Comparisons of revenue estimates between data from costs and earnings surveys and data from the catch-effort statistical system for selected gear types in 1985 and 1986

by D. Murphy and R. Shotton. Ottawa: Dept of Fisheries and Oceans, Economic and Commercial Analysis Directorate, 1989. 22 p. : ill. (Economic and commercial analysis report ; no. 24) ISSN 0843-5626 ISBN 0-662-17165-9
MICROLOG 89-05303 1 fiche

Scotia-Fundy Region obtains data on vessel performance by collecting catch and revenue data through its slip-landings reporting system and through annual costs and earnings surveys which each year focus on a number of specific fisheries. Because these surveys also collect data on vessel revenues, the revenue estimates can be compared to those from the catch-effort census to indicate the accuracy of reported vessel revenues. This report presents an analysis of revenues of vessels sampled by costs and earnings surveys in 1985 and 1986, compared with their revenues as indicated by the catch-effort census. The questions examined, both on a specific gear-type basis, include the similarity of results of the cost and earnings survey with the catch-effort census, and the difference in the two estimates of revenue for the different gear-type fisheries, under specific assumptions.

Compelling appearance, interim release and pre-trial detention

Ottawa : Law Reform Commission of Canada, 1988. 138, 150 p. Bibliogr. (Working paper ; 57) At head of title: Criminal law. Bilingual (Les Mesures assurant...). ISBN 0-662-55896-0
MICROLOG 89-00078 4 fiche

This paper examines several important questions about criminal procedure. How should police or courts compel accused persons or witnesses to attend court for trial? When should police or courts grant interim release to these persons? When should they impose detention instead of release prior to trial? What should be done to ensure a person's right to make full answer and defence while in such detention? The answers to these questions are deduced from general principles governing criminal procedure. It examines the present law, exposes any defects that arise by reason of inconsistency with general principles of criminal procedure, and proposes a comprehensive scheme of interim release which properly balances these principles

Competence and human reproduction

Edmonton : University of Alberta, Institute of Law Research and Reform, 1989. iii, 91 p. (Report ; no. 52) ISSN 0317-1604 ISBN 0-8886-4152-4
MICROLOG 89-03209 2 fiche

Review of the legal aspects of sterilization in an attempt to answer the questions of whether sterilization for any purpose other than physical health or mental health, narrowly interpreted, can be for the benefit of the person sterilized, and whether, if there is a benefit, the law should withhold it from a person who is unable to make an informed choice for or against it. This report presents proposals for reform, reviews the existing law, and presents the case for reform using two case studies. Proposals for reform take into consideration the scope of the legislation, who is to be the decision maker: a best interests test for sterilization; factors for a judge to consider; the method of sterilization; representation; the procedure; expert evaluation of the person to be sterilized; investigation by the judge; cross-examination on expert reports; costs; and enactment of the legislation.

Competition in public long-distance telephone service in Canada

Federal-Provincial-Territorial Task Force on Telecommunications (Canada). Ottawa : The Task Force, 1988. xliii, 242, xlv, 267 p. : ill. Bilingual (La Concurrence dans...). CSI 21102 202. ISBN 0-662-56266-6
MICROLOG 89-01323 7 fiche

Summary of a study by the Task Force examining factors that would be related to the introduction of competition in public long-distance telephone service in Canada. Information was collected and analysed, but members of the public were not involved and no recommendations were given. This report covers the current state of the telecommunications market; experience in the United States, the United Kingdom, Japan, and Europe; factors affecting competition or monopoly; the nature of competitive entry into the market, including competition models, universal availability of affordable telephone service, and various scenarios; a financial analysis of competition; and conclusions reached.

The Competitive position of fuelwood from proposed energy plantations in Newfoundland

D. Fletcher & Associates Ltd. Ottawa : ENFOR, 1988. 40 p. Bibliogr. ENFOR project P-362.
MICROLOG 89-04514 1 fiche

It is generally admitted that energy plantations will only be considered a viable energy source when the cost of energy generated from plantation biomass is equal to, or lower than, the cost of alternative fuels. This report develops an estimation of the cost of steam generated through the combustion of biomass from hypothetical energy plantations in Newfoundland and compares it with the cost of steam generated from biomass from non-commercial forests and fuel oil. The assessment is based on a "usable energy" approach, taking into account the heat value and cost of each feedstock as well as the cost configuration and efficiency of the system recovering energy from the feedstock. The report also includes a brief overview of the current status of energy plantation research in Sweden, the United States, and central Canada.

Computer systems requirements and recommendations

DIGI-PLUS Inc. Montreal : Transportation Development Centre, 1989. 869 p.
MICROLOG 89-05359 10 fiche

In the past 10 years, TDC has developed an integrated, computer based management information system (MIS) covering the financial and project management requirements essential for ongoing R&D programs. Concerns were expressed by regional information offices about the present MIS because it is not compatible with Transport Canada's other computer systems and networks based on IBM equipment. In response, TDC carried out a comprehensive computer systems requirements and recommendations study based on the DCI systems development life cycle standards. The resulting report serves as the components of an overall TDC information plan. Volume 1 includes the executive summary and user requirements; volume 2 is a feasibility study report; volume 3 contains MIS system outputs; and volume 4 contains MIS system inputs, and MIS databases.

Computer vision for weld inspection

by D.L. Mader. Toronto : Ontario Hydro, Research Division, 1988. 38 p. : ill. (Report ;

no. 88-131-K)

MICROLOG 89-02556 1 fiche

A vision sensor system was proposed for inspection of the bellows-ring to end-fitting fillet weld in the Bruce West Shift operation using a commercial laser vision system. This report presents the result of using the commercial laser vision sensor on a mockup test ring. A computer vision program was prepared to accept data from the sensor, analyse it, and determine weld leg lengths.

Computerized preference-avoidance quantification and analysis : a rapid, high-resolution method

by E. Scherer, R.V. Hunt and R.E. McNicol. Winnipeg : Dept. of Fisheries and Oceans, Central and Arctic Region, 1989. iv, 9 p. Bibliogr. (Canadian technical report of fisheries and aquatic sciences ; no. 1672) This is the 23d technical report from the Central and Arctic Region, Winnipeg. ISSN 0706-6457 MICROLOG 89-03977 1 fiche

Preference-avoidance responses are widely used in sublethal toxicity assessments, although response quantification and analysis are as yet non-standardized and problematic. A previously published tracking device delivers analog recordings of animal movements between "pure" and chemically or physically altered test areas. For lack of cost- and labour-efficient methods, it has not been feasible so far to adequately utilize the information contained in such recordings. This report describes an inexpensive add-on module consisting of an analog-digital converter, microcomputer, and printer which provides instantaneous, automatic and complete quantification of animal movements in choice experiments.

Computerized scheduling and brokerage demonstrations, Edmonton and Vancouver : a comparative analysis

by T. Gegan. Montreal : Transportation Development Centre, 1987. xvi, 74 p. : ill. TP 8712E MICROLOG 89-06050 1 fiche

In 1985, two scheduling and brokerage demonstration projects were sponsored, concluding in March 1987. In Edmonton, a centralized brokerage system was established using commercial proprietary software to match client trip needs with the most cost-effective service option (city-owned buses, taxis, owner-operated vans). A computer system was installed to support the operations of the brokerage centre. In Vancouver, an attempt was made to install a decentralized brokerage system in which an electronic network was to be used to allow information-sharing so that individual operators could coordinate services between themselves. This report provides a comparative analysis of the 2 demonstrations projects for project organization, approach, software/hardware, implementation strategy, project results, and lessons learned.

The Concept and theoretical considerations of a cold weather clothing system

by B. Cain, B. Farnworth and R. Oszczewski. Ottawa : Defence Research Establishment Ottawa, 1988. vii, 36 p. : ill. Bibliogr. (Report ; no. 998) MICROLOG 89-02378 1 fiche

Discussion of the concepts and theoretical considerations of a clothing system for cold weather, divided into extreme cold (-40 - -10C) and cold wet (-10 - 10C). An essential goal was the provision of adequate thermal insulation for metabolic rates from 150-600W, while a desirable goal was to provide adequate thermal insulation for metabolic rates up to 1000W. A mathematical model was used to predict thermal insulation requirements for the clothing and to predict optimum insulation distribution over the body. The predictions of the thermal insulation provided by prototype garments were compared with experimental test results obtained with the clothing on a heated manikin.

Conditions de régularité géométrique pour les inéquations variationnelles

par J.-P. Dussault et P. Marcotte. Montréal : Université de Montréal, Centre de recherche sur les transports, 1988. 16 p. Bibliogr. (Publication ; no. 594)
MICROLOG 89-00135 1 fiche

Cette thèse présente une nouvelle condition de régularité pour les inéquations variationnelles. Cette condition de régularité est de nature géométrique, et permet d'analyser la convergence d'algorithmes itératifs. On expose également diverses formulations du problème, ainsi que des conditions de régularité qui s'expriment naturellement dans l'une ou l'autre de ces formulations. En particulier, on mentionne la condition de régularité forte de Robinson et la condition de stricte complémentarité classique. On met aussi en évidence les liens entre ces conditions à l'aide d'exemples et de contre-exemples.

Conductors for overhead transmission : benefits of using compact, low-loss, and larger diameter conductors

by J.S. Barrett and M.A. Green. Toronto : Ontario Hydro, Research Division, 1988. 17 p. : ill. Bibliogr. (Report ; no. 88-166-K) MICROLOG 89-02544 1 fiche

The cost of building and operating overhead transmission lines is governed by the choice of conductor. Selecting a larger conductor will increase the capital cost of a line, but decrease the resistive energy losses and the need for generating facilities to provide the lost energy. Simple economic analyses are used in this report to demonstrate the potential for very substantial saving through the use of larger and more carefully designed conductors. Descriptions are given of conventional aluminium conductor steel reinforced (ACSR), compact ACSR, and low-loss optimal ACSR, with the advantages and disadvantages of each. EN ON PR PS SC

Conférence fédérale-provinciale/territoriale sur la faune : compte rendu

Conférence fédérale-provinciale/territoriale sur la faune (52e : 1988 : Victoria, C.-B.). Ottawa : Service canadien de la faune, 1988. 285 p. Bibliogr. ISSN 0069-0007 ISBN 0-662-95278-2 MICROLOG 89-04212 3 fiche

Les Congés pour les travailleurs et travailleuses ayant des obligations familiales

Monica Townson Associates Inc. Ottawa : Travail Canada, Bureau de la main-d'œuvre féminine, 1988. 126 p. Bibliogr. L'éd. anglaise (Leave for employees...) : 89-05294/2. MICROLOG 89-05114 2 fiche

En plus d'examiner la question des congés pour les travailleurs ayant des obligations

familiales, ce rapport traite des changements socio-économiques et démographiques qui ont créé le besoin d'un congé pour obligations familiales et passe en revue les positions adoptées en 1987 par divers organismes patronaux et syndicaux et par les groupes communautaires. On y examine également les dispositions statutaires en matière de congé pour obligations familiales au Canada et à l'étranger. Finalement, on présente diverses options de congés pour les travailleurs ayant des responsabilités familiales. CA LA

Conical volume-delay functions

by H. Spiess. Montreal : Université de Montréal, Centre de recherche sur les transports, 1989. 9 p. : ill. Bibliogr. (Publication ; no. 628) MICROLOG 89-04690 1 fiche

In most traffic assignment methods, the effect of road capacity on travel times is specified by means of volume-delay functions which are used to express the travel time (or cost) on a road link as a function of the traffic volume. Of these volume-delay functions, the most widely used are the BPR function (Bureau of Public Roads, 1966). This paper points out some drawbacks inherent in the BPR function, then develops a set of conditions which a "well-behaved" volume-delay function should satisfy. This leads to the definition of a new class of functions named conical volume-delay functions, related to their geometrical interpretation as hyperbolic conical sections. PS SC TR

Conseil consultatif canadien sur la situation de la femme : Rapport annuel 1987-88

Containment leak search during Bruce NGS B 1988 station outage

by T.G. Pringle. Toronto : Ontario Hydro, Research Division, 1989. 27 p. : ill. Bibliogr. (Report ; no. 89-1-K)
MICROLOG 89-06335 1 fiche

To minimize radionuclide dispersion at nuclear generating stations, the containment volume is maintained at negative pressure and the containment boundary is periodically pressurized while off-power to test for leakage. During the 1988 pressure test at Bruce Nuclear Generating Station B, a leak search of this boundary was conducted to identify and quantify leakage. Ethylene tracer gas at 2.5% was injected into containment to achieve a concentration of approximately 30 uL/L at the peak LOCA pressure of 88kPag. Over 570 samples of station air were collected and analyzed for evidence of tracer gas. This report presents the results of that test and proposes recommendations for future refinement of the tracer gas method.
EN ON PR PS SC

Containment leak search during Bruce NGS A 1987 station outage

by T.G. Pringle, T. Jarv and B. Handy. Toronto : Ontario Hydro, Research Division, 1988. 23 p. : ill. Bibliogr. (Report ; no. 87-227-K)
MICROLOG 89-02546 1 fiche

A physical containment barrier minimizes the potential release of radionuclides from nuclear plants. Periodic tests are required by the Atomic Energy Control Board to demonstrate both the integrity of the containment boundary at Ontario Hydro's nuclear generating stations and that the air leakage is less than 2% per hour at design pressure. As part of the May 1987 Bruce Nuclear Generating Station A outage, a pressure test was conducted during which the entire containment volume (reactor vaults, fuelling machine ducts and service

areas) was pressurized and the leakage rate measured at various pressures. Concurrently a search for leakage sites was conducted. An ethylene tracer gas was injected into containment to achieve an internal concentration of approximately 50 uL/L, rather than the more conventional technique of spraying with soap solution.

Containment of radium in tailing dumps as radium arsenate : final report

Nova Scotia Research Foundation Corporation Dartmouth, N.S. : The Foundation, 1989. i, 41 p. Bibliogr. *CANMET contract 79211-01-SQ*.
MICROLOG 89-02922 1 fiche

Study of the chemistry of radium arsenate to ascertain if, by the treatment of uranium mill effluents with arsenate a more stable tailings will result with a lower concentration of radium-226 in the discharge waters. Tailings used in the study came from the Elliot Lake mines. The effect of barium to arsenate ratio on the effectiveness of barium arsenate barriers in containing radium in tailings dumps were determined by passing 1 litre of solutions containing 1000 pCi Ra226 through each column, the effluents collected, and then analyzed by measuring the alpha emission. Aging of barriers and the effect of freeze-thaw and wet-dry cycling on the efficiency of radium containment was determined by passage of a radium solution through a column after the barrier material had completed a cycle. Aging effects were studied at 2 and 6 pH and 1% in Ba3(AsO4)2.

Contamination by pesticides of the La Salle and Assiniboine Rivers, Manitoba, Canada

by S. Therrien-Richards and D.A. Williamson. Ottawa : Environmental Protection Service, Western and Northern Region, 1987. iii, 54 p. Bibliogr. (Report ; CP(EP) WNR87/88-1)
MICROLOG 89-00675 1 fiche

The natural flow of the La Salle River is being augmented with water pumped from the Assiniboine River in an attempt to provide an adequate supply for domestic consumption, livestock watering and irrigation purposes. Concerns with regard to the presence of agricultural pesticides in this stream led to the initiation of this investigation. Water samples were collected from 7 locations on the La Salle River and from 2 sites on the Assiniboine River once per month from August to December 1984. Representative forage fish, aquatic macrophyte and bottom sediment samples were collected on one occasion in August 1984. All samples were analyzed for bromoxynil, 2,4-D, dicamba, diclofop-methyl, MCPA, triallate and tribluralin

Continental divide : the values and institutions of the United States and Canada

by S.M. Lipset. Toronto : Canadian-American Committee, 1989. xviii, 326 p. Bibliogr. *Summary (24 p.) laid in*. ISBN 0-88806-240-0
MICROLOG 89-06385 4 fiche

The central argument of this study is that Canada and the United States differ in their basic organizing principles. It shows how Canada has been and is a more class-aware, elitist, law-abiding, statist, collectivity-oriented, and particularistic (group-oriented) society than the United States. It argues that these fundamental distinctions stem in large part from the American Revolution and the diverse social and environmental ecologies flowing from the division of British North America. Finally it shows how the social effects of this separation were then reinforced by variations in literature, religious traditions, political and legal institutions, and socioeconomic structures.

Contraceptive use in Africa

by D. Achanfu-Yeboah. Edmonton : University of Alberta, Dept. of Sociology, 1988. 10 p. Bibliogr. (Research discussion paper ; no. 54) ISSN 0317-2473
MICROLOG 89-01429 1 fiche

This position paper examines the contraceptive use in Africa as evidenced from the world fertility survey. It re-establishes, in the light of new evidence, the paucity of contraceptive use in Africa. In addition, the paper analyses rural-urban, educational and related differentials in contraceptive use. It draws attention to the fact that contraceptive use is not only limited, but that the small proportion of users tend to employ mainly inefficient methods.

Controlling pollution from Canadian pulp and paper manufacturers : a federal perspective

by W.F. Sinclair. Ottawa : Environment Canada, Conservation and Protection, 1988. xviii, 615 p. : ill. Bibliogr. MICROLOG 89-03647 7 fiche

Assessment of the progress made in pollution control in the Canadian pulp and paper industry as a result of the federal pulp and paper effluent pollution regulations of 1971 and the air emission guidelines that were established in 1979. The study includes an historical review of the industry processes used to produce pulp and paper in Canada; an examination of the mandate and the stated objectives of federal efforts to control pollution generated by the industry; an analysis of the need for continuing federal involvement in regulating pollution caused by the pulp and paper industry; an assessment of discharge reductions achieved; an evaluation of the efficiency of the regulations as they are currently administered; and conclusions and recommendations.

Controlling the seedling debarking weevil : an economic analysis

by J.P. Quinn... et al. S.I. : Canadian Forestry Service - Maritimes, 1989. 7 p. (Technical note ; no. 202) ISSN 0820-8107 MICROLOG 89-02738 1 fiche

In Nova Scotia and Prince Edward Island, an important consideration when establishing conifer plantations is the seedling debarking weevil. This economic analysis examines the cost-effectiveness of plantation treatment options and ranks them according to the total cost of establishing the new stand and the various levels of risk of mortality caused by the weevil.

Conventional arms control in Europe : western opening positions

by J. Toogood. Ottawa : Canadian Institute for International Peace and Security, 1988. 34 p. (Working paper ; no. 15) ISBN 0-662-16647-7 MICROLOG 89-03694 1 fiche

This paper sets out recommended options for initial NATO positions and tactics in the upcoming negotiations. It reviews past negotiations on conventional forces in Europe, highlighting developments that have significance for the new undertakings. It also discusses the mandates of the Conventional Stability Talks and the Conference on Confidence and Security Building Measures and Disarmament in Europe. The author also addresses the military and political factors which NATO must take into account when developing negotiating positions. Finally, the paper draws conclusions from the earlier discussion in this paper and sets out recommended Western negotiating positions, both substantive and tactical.

The Conversion of gas oil in a rapid cracking process using cracking catalyst and silica sand heat carriers : final report

by B.A. Freal and R.G. Graham. Gloucester, Ont. : Ensyn Engineering Associates Inc., 1989. ix, 60 p. CANMET contract: 89028-01-SQ. MICROLOG 89-05127 1 fiche

A preliminary investigation of the conversion of gas oil to chemical intermediates (olefins, petrochemicals) and light transportation fuels (gasoline) was carried out in Ensyn's rapid thermal processing pilot plant. The plant is rated nominally at 1 barrel per day, and is equipped with a novel reactor system to accomplish very fast heat transfer and short residence times over a broad range of reaction temperatures. During the project, 9 experiments were completed, 6 of which included a non-catalytic heat carrier (silica sand) to transfer heat to the reactor system, and 3 of which used a catalytic heat carrier (an aluminosilicate cracking catalyst). Complete

mass balance procedures were carried out during all of the experiments to verify the estimates of the product yields.

Corporate directors' liability

Edmonton : University of Alberta, Institute of Law Research and Reform, 1989. 64 p.

Bibliogr. (Research paper ; no. 17) ISSN 0838-0503 ISBN 0-88864-153-2 MICROLOG 89-02514 1 fiche

Examines current law and policy bearing on the standard of care applicable to directors of Alberta business corporations. The report then explores some legal decisions in U.S. jurisdictions over the past three years that have apparently tightened up the standards that govern directors' conduct. After reviewing these topics, this paper broaches two principal issues. First, are there any grounds for predicting that Canadian courts will follow the pattern set in the U.S.? Second, might it be advisable, even without any impending judicial reinterpretation of the law, to amend Alberta's corporations scheme to protect directors in this province from undue legal hazards?

Correlation between wind speeds at two different heights within a large forest clearing in central Saskatchewan

by Z. Chrosiewicz. Edmonton : Government of Canada, Canadian Forestry Service, Northern Forestry Centre, 1975. 9 p. Bibliogr. (Information report ; NOR-X-141) ISSN 0704-7673
MICROLOG 89-00179 1 fiche

Measurements of wind speeds at the height of 10 m over level, open terrain are required for use in the new Canadian fire weather tables. However, there are situations where wind speeds are measured only at 1.2 m, which is about the recording height for most other weather observations. Conversion of wind speeds at 1.2 m to wind speeds at 10 m, although desirable, is seldom possible because of lack of suitable data. To overcome this difficulty, appropriate wind measurements were taken during two snow-free seasons from May through September in 1970 and 1971, some 24 km north-northeast of Candle Lake, Saskatchewan. The results, including conversion tables, are presented in this paper.

A Cost analysis of egg production in Alberta, 1987

by R. Susko. Edmonton : Alberta Agriculture, Production Economics Branch, 1988. iv, 23 p. CSI 34101.024.
MICROLOG 89-03422 1 fiche

Table eggs in Alberta are priced by the Canadian Egg Marketing Agency, one of whose objectives is to establish an equitable price for commercial eggs in each province, using its national cost of production study. In 1983, Alberta Agriculture initiated a provincial cost study to monitor the relation between the national and the provincial cost. This report is the summary of the 5th year of that study and provides an account of the costs and economic conditions in the production of commercial eggs in Alberta; an analysis of present price efficiency in Alberta; and a personal economic analysis for management purposes to the participating producers. The report was prepared from farm records of a selected number of egg producers who voluntarily participated in the project.

Cost-variance optimization for the Canadian Labour Force Survey

by G.H. Choudhry, H. Lee and J.D. Drew. Ottawa : Statistics Canada, Methodology Branch, Census and Household Survey Methods Division, 1985. 31 p. Bibliogr.
MICROLOG 89-02445 1 fiche

The cost-variance optimization of the design of the Canadian Labour Force Survey is carried out in two steps. First, the sample designs are optimized for each of the two major area types, the self-representing (SR) and the non-self-representing (NSR) areas. Cost models are developed and parameters estimated from a detailed field study and by simulation, while variances are estimated using data from the Census of Population. The scope of the optimization includes the allocation of sample to the two stages in the SR design, and the consideration of two alternatives to the old design in NSR areas. The second stage of optimization is the allocation of sample to SR and NSR areas.

Cover type mapping in the commercial forest region of Saskatchewan for moose habitat

by J. Polson. Saskatoon, Sask. : Saskatchewan Research Council, 1987. iv, 15 p. (SRC technical report ; no. 207) (SRC publication ; no. E-905-21-B-87) At head of title: *Saskatchewan Technology Enhancement Program*.
MICROLOG 89-02426 1 fiche

Although extensive development in logging, mining, and road construction has occurred in northern Saskatchewan in recent years, no useful land cover maps were available. Forest Inventory Maps were available for the commercial forest area but were too detailed for general use in resource planning. This report assesses the feasibility of using Landsat MultiSpectral Scanner (MSS) data to map major vegetation types in the Wapawekka area; to create a thematic map at scales of 1:250,000 and 1:125,000; and to compare the thematic map data to existing forest cover maps.

Cowichan River assessment, 1987 : the influence of river discharge on sidechannel fish habitats

by T. Burns, E.A. Harding and B.D. Tutty. Nanaimo, B.C. : Dept. of Fisheries and Oceans, South Coast Division, Habitat Management Operations, 1988. v, 184 p. : ill., maps. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences ; no. 1999) ISSN 0706-6473
MICROLOG 89-04769 3 fiche

The Cowichan watershed is a major salmonid producing stream for commercial, Indian and recreational fisheries. In 1987, joint provincial and federal flow regime studies began, with the province carrying out selected studies on the

Cowichan mainstream while the federal responsibility was to determine the influence of river discharge on sidechannel fish habitats. This report identifies 142 sidechannels and classifies them into 4 categories defined as flood channels, active channels, back channels, and relic channels. Field assessments were conducted to ascertain the amount of wetted sidechannel fisheries habitat that was lost as discharge was reduced.

Cowichan watershed fry salvage and coho colonization operations, 1986 : a review and preliminary results

by T. Burns...et al. Nanaimo, B.C. : Dept. of Fisheries and Oceans, South Coast Division, Habitat Management Operations, 1987. vi, 68 p. : ill., maps. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences ; no. 1949) ISSN 0706-6473
MICROLOG 89-04768 1 fiche

In 1984, a strategic habitat inventory system identified extensive fish habitats above barriers which were verified as potentially viable, low gradient coho habitat in the dry summer of 1985. A team was assembled to plan, conduct, and evaluate the performance and benefits of fry salvage operations in 1986. A total of 174,291 salmonid fry were salvaged and 121,306 of these coho were colonized at specified densities into designated above barrier habitats of which 3 were trapped the following spring to determine overwintering and eventually ocean survival. An economic evaluation of the program was derived from the salmonid enhancement program evaluation model. Economic and operational recommendations to streamline Cowichan fry salvage and transport activities are identified.

The Coyote bounty in Nova Scotia, 1982-1986

by S.B. Anderson. Halifax : Dept. of Lands and Forests, 1988. 4 p. Bibliogr. (Technical note ; no. 52) CS/ 51111.203.
MICROLOG 89-00407 1 fiche (Available on fiche only)

The first eastern coyote collected in Nova Scotia was in Guysborough County in 1977. Because of its threat to livestock, a \$50 bounty was initiated in November 1982 for each coyote carcass, providing an opportunity to determine the age structure, sex ratio, reproductive potential, and food habits of this new resident mammal. This report summarizes the results of this work (except food habits). The carcass collection ran from November 1982 to June 1986 when the bounty was dropped in favour of a sheep compensation plan.

Crack arrest requirements for arctic structures : final report

by B.A. Graville. Georgetown, Ont. : Graville Associates Inc., 1989. ii, 41 p. : ill. CANMET contract: 89190-01-SQ.
MICROLOG 89-05129 1 fiche

A significant aspect of Preliminary Standard CSA S473 (Code for the Design, Construction, and Installation of Fixed Offshore Structures, Part III - Steel Structures), and one which affects both the safety and economy of offshore structures, is the material toughness

requirements. Most toughness requirements for critical structures have their origin in the Fracture Analysis Diagram (FAD), derived from extensive research on fractures in ship plates. The approach taken in CSA S473, and inherent in the FAD, is that the crack arrest properties can be established from a knowledge of the nil ductility transition temperature (NDTT). In order to validate the CSA S473 approach this report reviews crack arrest data from modern arctic grade steels in terms of the NDTT and the FAD.

A Creel census of Clearwater Lake, 1983-84

by D. Leroux. Winnipeg : Manitoba Natural Resources, Fisheries Branch, 1988. vi, 37 p. ill. Bibliogr. (Manuscript report ; no. 88-09) MICROLOG 89-01451 1 fiche

Clearwater Lake is located 25 km north of The Pas and is one of the principal recreational areas in the region. Sport fishing is a major attraction, and the lake also provides a source of lake trout eggs for government hatcheries. In 1979 a study assessed the status of lake trout stocks. This 1983 study is necessary to obtain harvest estimates and to complement the biological data from 1979. The study determined present harvest rates of game fish; classified user groups and their respective proportion of the annual harvest; obtained

biological data on the anglers' catch to determine which segment of the lake trout population is being harvested, and suggested long term management goals and strategies based on the results of the creel census.

A Creel census of Goose Lake, 1979

by B.B. Bruederlin. Winnipeg : Dept. of Natural Resources, Fisheries Branch, 1982. vii, 47 p. maps. Bibliogr. (Manuscript report ; no. 82-13) MICROLOG 89-00701 1 fiche

A creel census and fish sampling program was conducted on Goose Lake for 22 randomly selected days from May to September 1979. The angler harvest is composed of northern pike and walleye. Anglers were interviewed upon returning to the landing as to the number and species of fish caught and released, hours spent angling, and anglers' place of residence. It is assumed that the number of fish caught included those consumed as shore lunches. In addition, 32 northern pike and 195 walleye were measured (fork length), weighed and fin samples removed.

Cropping strategy cash flow analyzer : use to compare low input traditional cropping systems and high input soil saver systems

by R. Bens. Saskatoon, Sask. : Saskatchewan Research Council, 1988. ii, 106 p. : ill. (SRC technical report ; no. 212)
MICROLOG 89-03692 2 fiche

A simple menu-driven cash flow analyzer program was developed to analyze cash flow characteristics and the level of use of energy intensive inputs for low input traditional cropping systems and high input soil saver systems. Benchmark data sets were developed to provide input/output information for different soil types in all 3 soil zones. The analysis carried out based on the benchmark data was used to compare costs on a per unit of output and per farm basis. The analysis focussed on the summerfallow vs. cropping decision in all soil zones, with the traditional 1/2:1/2 system and continuous crop systems as the standards for comparison.

Crossflow turbine developments and testing for ultra-low head hydro applications : report on theoretical modelling and experimental proving work undertaken with the assistance of Energy, Mines and Resources Canada

by J. Taylor. Vancouver, B.C. : Highquest Engineering Inc., 1987. 79 p. : ill. Bibliogr.
MICROLOG 89-05616 1 fiche

Assessment of sloped blades as a means of improving the torque characteristics of the vertical axis Darrieus-type hydraulic turbine. The work was concerned less with efficiency than overall cost effectiveness, and the aim was to assess turbine configurations likely to lead to a smooth and reliable turbine. The first phase of the project developed a mathematical modelling technique to project turbine performance with sloped blades, and designed an experimental set-up. The second phase was primarily experimental, involving extensive running and measurement of a variable-geometry test turbine in N.R.C.'s flume tank. Theoretical and experimental results were later compared and conclusions drawn.

Crystallinity in PPS-carbon composites : a study using diffuse reflection FT-IR spectroscopy and differential scanning calorimetry

by K.C. Cole. Boucherville, Que. : National Research Council Canada, Industrial Materials Research Institute, 1988. 31 p. : ill. Bibliogr. MICROLOG 89-00574 1 fiche (Available on fiche only)

In the field of high-performance composites, there is increasing interest in replacing thermoset polymer matrices by engineering thermoplastics such as polyether ether ketone (PEEK) and polyphenylene sulfide (PPS). One of the disadvantages associated with them is their varying crystallinity. This paper demonstrates white usefulness of diffuse reflection FT-IR for providing information on the crystallinity of PPS in PPS-carbon composites.

CTD (conductivity, temperature, depth) profiles : Barrow Strait, N.W.T., 1984-1986

by M.A. Bergman. Winnipeg : Dept. of Fisheries and Oceans, Central and Arctic Region, 1989. iv, 162 p. : ill. (Canadian data

report of fisheries and aquatic sciences ; no. 752) This is the 36th data report from the Central and Arctic Region. ISSN 0706-6465
MICROLOG 89-05859 2 fiche

As part of an arctic food-chain study, temperature, salinity and depth profiles were routinely taken from March to September 1984-86, either through 25 cm holes in the ice or during the open water season from a 7 m vessel (late July to September). The area samples included Barrow Strait west to the Barrow Strait sill (west edge of Cornwallis Island to Lowther Island), south to Somerset Island, east to Prince Leopold Island and Maxwell Bay on Devon Island, and the southern half of Wellington Channel. The data was obtained to correlate areas of biological activity with physical variation in the water column.

Curing and storing sweet potatoes in a modified bulk tobacco kiln

by D.L. VanHooren. Toronto : Ministry of Agriculture and Food, Agricultural Energy Centre, 1988. 27 p. Bibliogr.
MICROLOG 89-01134 1 fiche

A decline in the demand for Ontario flue-cured tobacco has prompted some tobacco producers to diversify into other crops. Since 1982, investigations have been ongoing to utilize tobacco kilns in the curing and/or storing of such crops as peanuts and shelled corn. In 1987, approximately 12 hectares of sweet potatoes were grown to explore the possibility of curing them in converted bulk tobacco kilns. The burner/blower unit of the kiln was not used, instead a 4.8 kW heater and a fan rated at 900 L/s at 90 Pa was used to provide heat and aeration. The insulation value of the roof was also upgraded. This report gives information on kiln modifications, their cost, handling requirements, energy consumption, and sweet potato quality after curing and storage.

The Frontier Geoscience Program was initiated in 1984 to respond to the discovery of oil and gas in the north and the east coast offshore, as well as the extension of Canadian boundaries offshore to 200 miles. The program's objective is to ascertain the geological history and development of all sedimentary basins offshore and in the north where oil and gas resources might occur. This publication presents a number of reports representing such activities in the Arctic, including an overview of the Frontier Geoscience Program itself. Abstracts are included for each report.

Daedalus line scanner trials in Alberta, 1985 and 1986

by C.J. Ogilvie and R.W. Young. Edmonton : Government of Canada, Canadian Forestry Service, Northern Forestry Centre, 1989. vi, 11 p. : ill. Bibliogr. (Information report ; NOR-X-298) ISSN 0704-7673 ISBN 0-662-16277-3
MICROLOG 89-02949 1 fiche

Approximately 1/2 of the forest fires in the prairie provinces are started by lightning, and only 60% of these are discovered within 24 hours of origin. Infrared (IR) line scanners have been developed that have the potential to locate some of these fires by detecting heat emissions before the critical stage is reached. This report describes the methods used to test the small-fire detection capabilities of a Daedalus 1260 and 1268 IR scanner mounted in a King Air 200 aircraft. The targets used for the trials were pans containing from 1-125 charcoal briquets. The targets were replicated 10 times and were positioned under various forest canopies. The scanner was flown at several altitudes and offsets over each target array, and the number of targets detected was recorded.

Darlington GS turbo-generator unit 4 : stability instrumentation report

by A.G. Morton. Toronto : Ontario Hydro, Research Division, 1989. 12 p. (Report : no. 89-210-K)
MICROLOG 89-06324 1 fiche

Four single shaft 850 MW turbo-generators are being installed at Darlington Nuclear Generating Station. Due to the size and complexity of the foundations, it was considered that information on their stability performance should be obtained. Units 1 and 2 were completely instrumented, with a lesser amount of instrumentation planned for Unit 4. This consisted of 12 combination stations on the turbine table (elevation 115 m) for horizontal alignment, vertical settlement and dynamic velocity measurements and 12 spring gap stations. In addition to the planned instruments, settlement stations were placed at elevation 101 m on the support columns for Units 3 and 4. This report describes the installation of the instruments and the initial readings in the table in an unloaded condition.

Darlington NGS preoperational aquatic study, 1985

by J.S. Griffiths. Toronto : Ontario Hydro Research Division, 1989. viii, 93 p. : ill. Bibliogr. (Report ; no. 89-166-K) MICROLOG 89-06337 2 fiche

Results of the 2nd preoperational aquatic study at Darlington Nuclear Generating Station. The study monitored the relative abundance and species composition of juvenile and adult fish with 64 gill net sets from May to December, monitored the reproduction of fall spawning fish (especially round whitefish) through sampling with larval tow nets and a benthic sled from April 17-May 23; conducted acoustic surveys of fish in the vicinity of the discharge mixing zone and the PPB intake; assessed the effects of underwater blasting (for the intake excavation) on fish; and measured sedimentation resulting from intake excavation and dumping of excavated material from June to August and the initial period of sediment redeposition from August to September. Effort was made to sample the intake and diffuser areas at depth contours from 5-15 m, with tows being made at the surface, mid-depth, and bottom. Sediment deposition data were collected from sediment tubes placed east and west of the intake excavation, at distances from 50-500 m.

Data base for weather related loads on overhead transmission lines in Ontario, part 1 : data analysis

by S.G. Krishnasamy and M. Tabatabai. Toronto : Ontario Hydro, Research Division, 1988. iii, 55 p. : ill. (Report ; no. 88-220-K) MICROLOG 89-04809 1 fiche

Historical data collected for up to 33 years at 30 Atmospheric Environment Service weather stations in Ontario were utilized to generate information on wind, ice and wind-on-ice loads on overhead transmission lines. This information was then used to provide tables for annual extreme wind, ice and wind-on-ice loads, annual return period (probability) plots for extreme wind speed, ice thickness and wind-on-ice loads and their 95% confidence limits; wind, ice and wind-on-ice loads for several return periods, and information on the correlation between wind and ice values for each weather station. Span factor plots developed from data gathered at Ontario Hydro tower load monitoring sites are also given along with a write-up on the ice modelling procedure used in the analyses. A PC-based computer program was developed to perform all the calculations.

Data from test fisheries conducted in the Northwest Territories, 1985-88

by D.K. McGowan. Winnipeg : Dept. of Fisheries and Oceans, Central and Arctic Region, 1989. vi, 121 p. Bibliogr. (Canadian data report of fisheries and aquatic sciences ; no. 756) *This is the 37th data report from the Central and Arctic Region, Winnipeg.* ISSN 0706-6465 MICROLOG 89-05302 2 fiche

The Department of Fisheries and Oceans initiated a test fisheries program in 1973 in the Northwest Territories to facilitate the development of new commercial fisheries for markets within and between communities. The information collected from the program helps to determine the commercial feasibility and initial quota allocations on new fishing areas requested by community groups. The test fisheries are conducted mainly by the Department of Renewable Resources, Government of the Northwest Territories. This report summarizes the results of these test fisheries conducted between 1985 and 1988, primarily for Arctic char.

Deasphalting of non-conventional residues and catalytic cracking of de-asphalted oils by metal-tolerant catalyst : final report

Sheridan Technical Associates Inc. Oakville, Ont. : The Associates, 1988. 2 v. : ill. Bibliogr. CANMET contract: 79126-01-SQ MICROLOG 89-04487 3 fiche

Results of a study of the deasphalting characteristics of non-conventional residuums and an assessment of the quality of the resulting deasphalted oils as catalytic cracking feedstock. Two typical non-conventional residuums from Athabasca and Lloydminster were selected for the study. These materials were deasphalted using propane, n-butane, n-pentane, and n-heptane as solvents over a range of solvent/oil ratios and temperatures. Sufficient deasphalting experimentation with feed and product testing was carried out to develop ternary phase envelopes for the 8 solvent/residuum systems and to define the effect of solvent and conditions of DA oil yield and quality. Selected DA oils were also catalytically cracked over a range of severities using a modified MAT reactor and commercial equilibrium catalyst. The resulting yield profiles were used to further assess the cracking characteristics of non-conventional DA oils.

The Debate about nuclear weapon tests

by J. Goldblat and D. Cox. Ottawa : Canadian Institute for International Peace and Security, 1988. 86 p. Bibliogr. (Occasional papers ; no. 5)
MICROLOG 89-00402 1 fiche

Gives an analytical review of the complex technical and political issues involved in a possible cessation or limitation of nuclear tests. It is an overview of a study which brought together more than two dozen specialists in various aspects of nuclear weapon testing. The paper begins with an analysis of the various reasons generally cited to explain the need for continued nuclear weapon testing. It concludes that force modernization through the design and development of new nuclear warheads is the central purpose of continued testing, although it is noted that tests to check the reliability of stockpiled weapons is a controversial issue.

Decline of zooplankton populations following eutrophication of lake 227, Experimental Lakes Area, Ontario, 1969-1974

by D.F. Malley, P.S.S. Chang and D.W. Schindler. Winnipeg : Dept. of Fisheries and Oceans, Central and Arctic Region, 1988. iv, 25 p. : ill. Bibliogr. (Canadian technical report of fisheries and aquatic sciences ; no. 1619) *This is the 17th technical report from the Central and Arctic Region, Winnipeg.* ISSN 0706-6457
MICROLOG 89-02004 1 fiche

Zooplankton have generally been found to respond to the eutrophication of lakes by increasing in response to fertilization, remaining much the same, or declining. In Lake 227 of the Experimental Lakes Area of northwestern Ontario, zooplankton declined in total biomass following fertilization with phosphorus and nitrogen in a ratio of 15:1 by weight from 1969-74. Although phytoplankton primary production and standing biomass were markedly enhanced following fertilization, mean ice-free season biomass of many species of planktonic crustaceans and total biomass of rotifers in this low-carbon lake declined unexpectedly. This paper describes the responses of various species of rotifers to the eutrophication of Lake 227 and examines the time course of the changes in populations of both crustaceans and rotifers in relation to other physical, chemical and biological changes in the lake.

Demography and immigration in Canada : challenge and opportunity

by C. Taylor. Ottawa : Employment and Immigration Canada, Immigration, 1987. 24. 28 p. Bilingual (Population et immigration au Canada...). Presented to the Conference of the Association for Canadian Studies in the Netherlands.
MICROLOG 89-03642 1 fiche

The paper places an historical context on the Canadian Federal Government's current perception of the need to create a much stronger linkage between the setting of immigration levels and longer-term demographic and economic considerations. It also indicates the specific migration and demographic conditions of the 1980s in Canada that contributed to the re-awakening and the use of

a demographic rationale to expand immigration in 1986 and 1987. Finally, it outlines, in a speculative way, some of the key considerations that will need to be considered in the recently announced demographic review to be undertaken by Health and Welfare Canada.

La Dentisterie préventive : pratique, règles et recommandations

Ottawa : Santé et bien-être social Canada. 1979. x. 340 p. : ill. Bibliogr. L'éd. anglaise (Preventive dental services) : 89-01283/3. ISBN 0-662-90841-4
MICROLOG 89-01282 4 fiche

Les affections dentaires sont un phénomène très répandu et très coûteux pour la population canadienne. Ce rapport étudie les règles en matière de prévention proposées au personnel dentaire ainsi que les méthodes de prévention qu'il utilise, puis évalue et rend compte de l'efficacité et de la rentabilité des techniques de prévention appliquées à l'heure actuelle. Il contient une étude de l'état actuel des connaissances en ce qui concerne l'exercice de la dentisterie préventive au Canada et indique les choix qui s'offrent aux praticiens parmi la panoplie des agents et des méthodes de prévention.

Description and testing of a new salmonid egg incubator

by F.P. Jordan. Nanaimo, B.C. : Dept of Fisheries and Oceans, Fisheries Research Branch, Pacific Biological Station, 1988. iii, 15 p. (Canadian technical report of fisheries and aquatic sciences ; no. 1645) ISSN 0706-6457
MICROLOG 89-01261 1 fiche

Salmonid eggs suffer substantial mortalities from the time of egg deposition to the fry emergence stage months later. Under normal or "wild" stream conditions, up to 80% of the eggs a female carries would perish. The incubator described in this report is designed to provide a more protected incubatory environment for salmon eggs and, therefore, to increase substantially the survival rate. The incubation unit is simple, reusable, and easily planted into natural stream gravels.

Description of a developmental series of larval broad whitefish *Coregonus nasus* (Pallas)

by R.A. Ratynski and B.G.E. De March. Winnipeg : Dept. of Fisheries and Oceans, Central and Arctic Region, 1989. iv, 12 p. : ill. Bibliogr. (Canadian technical report of fisheries and aquatic sciences ; no. 1670) This is the 22d technical report from the Central and Arctic Region, Winnipeg. ISSN 0706-6457
MICROLOG 89-03059 1 fiche

Broad whitefish is one of the most desirable domestic fisheries species in the Mackenzie Delta Region of Canada. Five species of the subfamily Coregoninae occur sympatrically in the Canadian waters of the southern Beaufort Sea. The identification of the larval stages has not been attempted because of inadequate descriptions. This study examined a developmental series of *C. nasus* reared in the laboratory from eggs collected and fertilized at Fort McPherson, N.W.T. Morphologic, meristic, and pigmentation characteristics that have diagnostic value in distinguishing the species from sympatric congeners were recorded and the larval series illustrated. Characteristics are compared to Eurasian *C. nasus* and sympatrically occurring coregonid species.

Design and construction of automated freeze-thaw testing equipment for concrete : final report

Fleet Technology Limited. Kanata, Ont. : Fleet Technology, 1988. iv. 117 p. : ill. CANMET contract: 69072-01-SQ.
 MICROLOG 89-01743 2 fiche

Cycles of freezing and thawing can be extremely destructive to concrete structures. Continued research into more appropriate materials for use in severe environments has created a need for systematic testing of concrete samples exposed to this action. Testing machines have been constructed for this purpose but are designed to subject concrete samples to thermal cycling only. This project studied the feasibility of designing and constructing an automated freeze-thaw testing machine which would incorporate all aspects of freeze-thaw testing while ensuring that standards set forth in ASTM C666 are met. This report presents concept development, a

detailed design, and the results of prototype testing, including estimated cost of the test apparatus for future production.

The Design and implementation of the IMRI strip caster

by J. Masounave...et al. Boucherville, Que. : National Research Council Canada, Industrial Materials Research Institute, 1988. 19 p. : ill. Bibliogr.
 MICROLOG 89-01562 1 fiche (Available on fiche only)

Increased competition in the steel producing market has led to a renewed interest in strip casting technologies, particularly those capable of producing strips from 1-10 mm thick with a minimum of post processing. This paper gives a detailed discussion of the IMRI twin-roll strip caster, particularly the simulation of the process. Parameters examined include the contact angle between the melt and the rolls, the heat transfer coefficient H, the roll speed, and the amount of superheat used when casting. The influence of these parameters on the strip exit temperature is discussed, as well as the problems associated with real time control of this process.

Design of a large-volume microwave plasma facility for metal passivation : a final report

by M.R. Wertheimer and H.P. Schreiber. Boucherville, Que. : National Research Council Canada, Industrial Materials Research Institute, 1982. iii. 125 p. (Etude : no 26)
 MICROLOG 89-00559 2 fiche (Available on fiche only)

Numerous laboratory-scale technical feasibility studies have shown that large-volume microwave plasma (LMP) processes could enjoy many applications in the production of sophisticated surface coatings and of surface modifications to metal, polymer, ceramic and other substrates. A flexible D&D system was designed for metal passivation, encapsulation, moisture barrier coatings, treatment of fibres and fillers for use in high-performance composites, and dielectric, optical, and tribological coatings. A series of design options for a large-volume microwave plasma facility were examined and engineering options in both technical and economic contexts were presented. Non-technical considerations included cost and the range of applications (market) as well as the role the unit is to play in penetrating that market.
 CA PS SC

Design of a long isotropic buffer rod

by C.K. Jen, L. Piche and J.F. Bussiere. Boucherville, Que. : National Research Council Canada, Industrial Materials Research Institute, 1988. 19 p. : ill. Bibliogr.
 MICROLOG 89-00545 1 fiche (Available on fiche only)

Ultrasonic pulse-echo techniques are in widespread use for the nondestructive evaluation of materials and measurements are often required under difficult conditions, leading to the use of buffer rods, which then avoid exposing the ultrasonic transducer to such conditions. This paper describes late-arrived or trailing echoes received by the buffer rod, and attempts to find methods to eliminate them. The buffer rods have diameters between a few to several tens of acoustic wavelengths, and lengths of more than 100 acoustic wavelengths. Longitudinal and shear wave measurements obtained on aluminium rods are given and interpreted theoretically as diffraction from the transducer and mode conversion at the walls of the buffer rod.

A Detailed review and evaluation of pre-drainage techniques and their applicability to Canadian coal mines : final report

by Associated Mining Consultants Ltd. ; with
Nowco Well Service Ltd. Calgary, Alta. :
Associated Mining Consultants, 1988. iv,
260 p. : ill. Bibliogr. *CANMET contract:
79016-01-SQ.*
MICROLOG 89-01744 3 fiche

Methane gas from coal seams and coal measure strata may be drained from the workings during or after mining, or from the area where the coal has not yet been worked. The off-shore mines on Cape Breton Island operate at ever increasing distance from the shore and depth below the seabed. Methane, from the coal ahead of the coal face in the seams being worked, flows through the seam into the coal face. This report presents the results of an in-depth review of reported techniques of pre-drainage of methane from coal seams in general and low permeability seams in particular, including, a review of relevant drilling technologies and directional drilling controls together with gas flow stimulation techniques like hydrofracturing and foam stimulation; reviews the applicability of methods to Canadian coal mines in general and to Cape Breton collieries in particular; and selects the most promising method for Cape Breton collieries and prepares a detailed program of testing in one of the collieries.

A Detailed salmonid fry salvage plan and coho colonization strategy for the Cowichan River watershed

by T. Burns. Nanaimo, B.C. : Dept. of
Fisheries and Oceans, Southcoast Division,
Habitat Management Operations, 1988. v,
27 p. : ill., fold. maps. (Canadian manuscript
report of fisheries and aquatic sciences ;
no. 1985) ISSN 0706-6473
MICROLOG 89-06105 1 fiche

A Cowichan watershed fry salvage and coho colonization plan was described in 1987 by Burns, et al. The paper called for a companion report describing in detail a recommended strategy and methodology. This is the companion report and it describes techniques developed to improve catch and overall efficiency of future fry salvage operations. The report identifies the above-barrier coho-colonization sites in the watershed, which have a 7-fold greater capacity to rear coho than the totals of fry salvaged in 1986 and 1987.

Detailed study of the reaction mechanism of spontaneous combustion of coal with particular emphasis on western Canadian low rank coals, phase II

by V. Dholakia and F.W. Bachelor. Calgary,
Alta. : University of Calgary, Dept. of
Chemistry, 1988. viii, 93 p. : ill. Bibliogr.
CANMET contract: 79009-01-ST.
MICROLOG 89-01740 2 fiche

Western Canada contains abundant quantities of low sulfur, low to medium rank coals, representing a good potential for sales to Eastern and overseas markets, particularly for power plants. For most of these coals, their only drawback is their tendency to spontaneous combustion, especially for those coals which have undergone a preliminary drying treatment before shipment. This report continues work begun in October 1983 and includes an update on this work. The major part of the report deals with studies on the progressive drying of 6 selected Alberta coal samples (3 high volatile

bituminous and 3 subbituminous) and their adiabatic response to the passage of a controlled humidity flowing gas. Changes in porosity, free radicals and peroxides were measured on samples to examine the effect of this drying and subsequent moist air treatment to see if any correlation could be made between these parameters.

Detection, prevention and remediation of leaks from underground storage tanks

Canada. Technology Development and Technical
Services Branch. Ottawa : Environment
Canada, Environmental Protection Service,
1989. viii, 75 p. : ill. Bibliogr. (Report ;
EPS 2/PN 1) *French ed. (Détection,
prévention et...)* : 89-02224/1. ISBN
0-662-16739-2
MICROLOG 89-02223 1 fiche

Steel tanks have been used for underground storage of petroleum products and derivatives for about 30 years. The oldest tanks have now exceeded their design life and product leaks related to corrosion problems are increasing. The length of the tank's life is one of several factors which could result in a petroleum product leak, which can contaminate soil and water in the immediate surroundings. This report summarizes the different recovery and treatment techniques applicable to hydrocarbon contaminated soil and water due to tank leaks. Detection and prevention are briefly discussed and some examples of available equipment are given.

Deterioration of balsam fir damaged by the eastern hemlock looper in Newfoundland

by J. Hudak, G. Laflamme and J.P. Meades. St. John's : Government of Canada, Canadian Forestry Service, Newfoundland Forestry Centre, 1978. iii, 33 p. : ill. Bibliogr. (Information report : N-X-157) ISSN 0704-7657
MICROLOG 89-00169 1 fiche

The eastern hemlock looper is a native species to Newfoundland and outbreaks of this insect have periodically caused extensive defoliation and mortality of balsam fir. In 1967, a study was initiated to provide guidelines for harvesting several damaged areas. This report describes aphid damage, the progress of looper defoliation and tree mortality, and the development of saprot in 3 selected watersheds. Estimates are provided on the extent of tree mortality and subsequent decay, and the suitability of wood for pulping. Suggestions are presented for alleviating losses.

Determination of 1984 chinook salmon escapement to Somass River system

by D.T. Lightly, T.F. Shardlow and A.Y. Fedorenko. Nanaimo, B.C. : Dept. of Fisheries and Oceans, Field Services Branch, South Coast Division, 1988. viii, 104 p. : ill. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences : no. 1982) ISSN 0706-6473
MICROLOG 89-05764 2 fiche

The 1984 spawning escapement of chinook salmon to the Somass River system was evaluated as part of the chinook key stream program for assessing the chinook stock rebuilding efforts on the Pacific coast. This report deals with the determination of spawning escapement and related biological information. The study estimated the total chinook escapement to the system; determined the age and sex composition of naturally spawning population; and estimated the total escapement of coded wire tagged chinook to the system, thereby assessing the contribution of hatchery and natural production to the total escapement and to various fisheries. Approaches taken include a mark/recapture program, a fishway count, and a river dead recovery.

Determination of fungal propagules in indoor air : project report

Paracel Laboratories Ltd. Ottawa : Canada Mortgage and Housing Corporation, 1988. 11 p. Bibliogr.
MICROLOG 89-04296 1 fiche

Identification of the fungi present to species is critical to an unequivocal determination of a hazardous situation with respect to fungi in indoor air. Unfortunately, this is usually impractical because of the limited availability of the relevant expertise and the considerable expense involved. The purpose of this document is to describe an evaluation strategy to assess fungal contamination of indoor air by measurement and inspection. The approach outlined provides an indication of the extent of fungal contamination of indoor air under most circumstances.

Determination of the nature and content of antioxidant and antioxidant synergist in PE and XLPE used in cables

by J.-P. Crine, S. Haridos and K.C. Cole. Boucherville, Que. : National Research Council Canada, Industrial Materials Research Institute, 1988. 21 p. : ill. Bibliogr.
MICROLOG 89-00557 1 fiche (Available on fiche only)

High-voltage underground cables are being insulated more and more with extruded polyethylene (PE) and crosslinked PE (XLPE),

which contain antioxidant to protect them against thermal degradation. Recently, antioxidant synergists have been added to PE and XLPE resins to interrupt the degradative cycle associated with the decomposition of hydroperoxides and to limit the consumption of antioxidant during cable extrusion, although little is known of the real efficiency of the additive. This paper presents the results of neutron activation analysis measurements. Fourier Transform Infra Red and UV spectroscopy measurements to identify and quantify antioxidant and antioxidant synergist in XLPE. The influence of crosslinking on the antioxidant compound is also briefly discussed.

Determining geotechnical and hydrogeological parameters using downhole geophysics in the Canadian plains

TransAlta Utilities Corporation. Ottawa
TransAlta Utilities. 1988. 2 v. : ill. Bibliogr.
Contents: Vol. I : Phase 1 report : a review of potential applications : volume I -- vol. II : Phase 2 report : correlations of existing data.
CANMET contract: 69175-04-SQ
MICROLOG 89-01733 4 fiche

The Downhole Geophysics project resulted from the desire of several resource companies and geoscience consulting firms to improve the cost-to-data ratio of obtaining hydrogeological and geotechnical information for both coal and oil sands mining operations. Phase I reviewed the literature and state-of-the-art of geophysical instruments, geotechnical applications, hydrogeological applications, current R&D, and software for parameter determination. Phase II evaluated through correlation whether various geotechnical and hydrogeological parameters could be obtained from downhole geophysics and reviewed which tools, not currently in use in Alberta, might have potential to provide the desired parameters. Work is divided into geotechnical in coal formations and in oil sands formations, and hydrogeological in coal formations.

Detoxification and decontamination of waters following chemical rehabilitation with Noxfish

by C.D. Tredger, R.P. Griffith and J.C. Wightman. Victoria : Ministry of Environment and Parks, 1989. 8 p. Bibliogr. (Fisheries technical circular ; no. 84) ISSN 0319-9436
ISBN 0-7726-0928-4
MICROLOG 89-02976 1 fiche

Rotenone, an organic piscicide, has been used in fisheries management in British Columbia since 1947. Recently, the fisheries management program has become increasingly concerned about quantifying the effects and fate of chemicals used in lake rehabilitation programs. Although research has demonstrated the human and environmental safety of rotenone as a piscicide, little research has been directed at the inert ingredients such as the diluents, emulsifiers, solvents, wetting agents and carriers which comprise up to 90% of some liquid rotenone formulations currently in use. This report describes the detoxification and decontamination of waters treated with Noxfish, a 5% liquid formulation produced by Roussel Bio Corporation. Water samples were collected from 3 lakes which were chemically rehabilitated in 1986. The samples were then analyzed for rotenone and the Noxfish diluent, to determine both persistence and rate of detoxification.

Development and performance evaluation of an energy budget snowmelt model

by D.M. Gray and P.G. Landine. Edmonton Alberta Environment, Research Management Division, 1988. xiii, 70 p. : ill. Bibliogr. (RMD report : L-113)
MICROLOG 89-00368 1 fiche

Meltwater released by the shallow snowcovers of the Canadian Prairies is an important water resource to the region. Therefore, many water management agencies are interested in methods of forecasting streamflow and seasonal water yield from snowmelt. The report describes the development and testing of a snowmelt model which uses the energy equation as its physical framework. Empirical procedures for evaluating radioactive, convective, advective and internal energy terms from standard climatological measurements are presented. Algorithms for accounting for changes in the energy terms in a daily energy balance model are described. The application of the energy budget snowmelt model (EBSM) for predicting ablation and simulating streamflow from small and large watersheds is evaluated.

MICROLOG 89-05694 3 fiche

Under the Municipal/Industrial Strategy for Abatement (MISA), monitoring requirements for each sector are specified in a general effluent monitoring regulation and relevant sector-specific regulation. The general regulation provides the technical principles common to all sectors (chemical analysis, toxicity testing, flow measurement and reporting), while the sector-specific regulation specifies the monitoring requirements of each direct discharger (actual parameters to be monitored, frequency of monitoring, and regulation in-force dates). This document provides background information on the development of the draft effluent monitoring regulation for the mineral industry sector, including an overview of Group A plants and the 6 subsectors; an in-depth explanation of the technical rationale which led to the regulation in its present form; the draft effluent monitoring regulation; and explanatory notes which provide an interpretation of the requirements of the regulation.

The Development document for the effluent monitoring regulation for the iron and steel sector

Toronto : Environment Ontario, 1989. iii, 234 p. ISBN 0-7729-5699-5
MICROLOG 89-05326 3 fiche

The Municipal/Industrial Strategy for Abatement (MISA) program is aimed at reducing discharges of toxic contaminants to Ontario's waterways, with an ultimate goal of elimination of all toxic discharges. Under the MISA program, the monitoring requirements for each industrial sector are specified in the general effluent monitoring regulation and the relevant sector-specific regulation. The general effluent monitoring regulation provides the technical principles which are common to all sectors and the sector-specific regulation specifies the monitoring requirements of each direct discharger in the sector. This document contains an overview of the iron and steel sector; a description of the derivation of the monitoring parameters and the monitoring frequencies specified; the actual regulations; and an explanation of the legal terms used.

Development incentives : the advantages and disadvantages of municipal financial and land use incentives

Edmonton : Alberta Municipal Affairs, Planning Services Division, Research and Development Branch, 1988. viii, 80 p. Appendices and bibliography (60 p.) laid in
MICROLOG 89-00072 2 fiche

The use of special land use and financial incentives by municipalities to attract development is widespread. In some parts of North America they form part of the competitive environment. In other jurisdictions municipalities' rights to offer incentives are legislatively constrained. The work contained in these reports provides a pool of information on the various incentives and their usefulness in practice. The scope of the work has been limited to the land use implications of the various incentives.

Development of a Canadian arctic bridge navigation simulator : validation of a shiphandling model

B. Menon, M. Steele, E. Samwel : prepared for the Transportation Development Centre. Kanata, Ont. : Fleet Technology Limited, 1988. xx, 112 p. : ill., maps. Bibliogr.
MICROLOG 89-04029 2 fiche

The Canadian Bridge Navigation Simulator (CABINS) is based on a network of micro-processors that produce computer-generated imagery for visual display required for nocturnal simulation. This report presents the results of a study with CABINS, utilizing available full scale data of ship's turning performance in level ice. Models for the R-Class vessels and the U.S. Polar Class vessels were developed and verified using available full scale data. Operational evaluation of the complete simulation model was carried out independently by 2 Canadian Coast Guard captains. The scenario used for the evaluation exercises consisted of the icebreaking vessel approaching and attempting to free a beset cargo ship in ice cover of uniform thickness as well as varying thickness. Each captain carried out a total of 12 exercises in 2 days, based on which they ranked the ship performance model on a scale of 1-10. Final evaluations included fidelity of navigation bridge instruments.

visuals, radar image, and the gaming area.

Development of a computer model to predict overheating in passive solar houses

G.K. Yuill and Associates. Ottawa : Energy, Mines and Resources Canada, Renewable Energy Branch, 1987. v. 45 p. : ill. Bibliogr. MICROLOG 89-06355 1 fiche

Passive solar houses designed to maximize winter solar gains may overheat in summer, if poorly designed. This project developed a means of predicting overheating. Overheating was quantified by the cooling load, the amount of cooling energy needed to maintain a building below a specified temperature, per unit floor area. This does not imply that the building would have a cooling system, but that the amount of discomfort experienced by a person in the building is proportional to the amount of heat that would have to be removed from the building to maintain comfort. A technique to determine this overheating, using monthly average data, was developed and compares favourably with BLAST, a much more sophisticated hourly heat balance simulation.

Development of a derailment accident computer simulation model

prepared for Transportation Development Centre and Transport of Dangerous Goods, Transport Canada : by A.J. Coppens, J.D.E. Wong and A.M. Birk. Montreal : Transportation Development Centre, 1988. xiv, 390 p. : ill. Bibliogr. MICROLOG 89-05279 5 fiche

A prototype computer program has been assembled which is capable of simulating a derailment accident involving up to a maximum of forty rail cars, of which up to eight can be tank cars containing dangerous commodities (chlorine, propane, hexane). The computer program is made up of a number of submodels representing major derailment events, including derailment mechanics, impact induced ruptures, liquid spills, gaseous releases, plume and puff dispersion, fires, fire impingement on tank cars, and explosions. This study represents the first attempt at simultaneously representing all the significant events in a derailment accident. It simulates the Mississauga derailment as an example.

Development of a model for progressive damage in ice

Det norske Veritas (Canada) Ltd. Ottawa : Public Works Canada, Architectural and Engineering Services, 1988. v. 112 p. : ill. Bibliogr. ISBN 0-662-16292-7 MICROLOG 89-02042 2 fiche

Report which addresses two important aspects of the interaction between ice and fixed structures: progressive damage to ice during compression, and the clearing of pulverized material around an indenter. Computer models were developed using finite element methods to emulate and analyze the behaviour of ice. Scarcity of relevant data on ice crushing led to a number of assumptions based on existing damage theories for metals, concrete, and rocks. An isotropic shear degradation model was implemented and uniaxial loading tests were applied. A shear damage model was applied to the spread of microcracks during an ice sheet indentation test. A relationship among velocity, viscosity, ice thickness, and pressure on the indenter was derived.

Development of a solar power supply for remote aquaculture operations

SOLTEK Solar Energy Ltd. Ottawa : Energy, Mines and Resources Canada, Renewable Energy Branch, 1987. x, 40 p. : ill. Bibliogr. MICROLOG 89-05615 1 fiche

Aquafarms are usually located in remote tidal channels, and over 90% do not have access to grid connected power. At present, diesel generators are the most common source, with some farms having small hydro systems or no power at all. A 12v dc solar power system was designed to deliver a minimum of 600 watt hours per day using a 630 peak watt photovoltaic array of 14 45w modules, 1540 amp-hrs of battery storage, a 50 amp series relay regulator and a 1.2 kW inverter to provide 120v ac power. The prototype system was installed at the Goodrich Island Seafarms' Sooke Basin site located 50 km west of Victoria in December 1986. Insolation and dc power consumption were monitored for 6 months, from January 27-June 1, 1987. This report summarizes the development of the system, the monitoring program at the farm, and the economics of solar energy systems for the aquafarming industry.

Development of a system to combine solvent recovery with the recovery of heat from residual organic wastes

by D.K. Jackson...et al. Ottawa : Environment Canada, Environmental Protection Service, 1989. ix, 32 p. (Report ; EPS 3/C/1) ISBN 0-662-16864-XX
MICROLOG 89-05190 1 fiche

Manufacturers who make paint or who paint products in a variety of colours must clean their equipment whenever they change the colour by flushing it with solvent. This produces substantial volumes of dilute paint of nondescript colour. Anachemia Solvents, in Mississauga, is in the business of reclaiming such solvent and returning it to its customers. After reclaiming the paint solvents, a sludge composed of solvent, resins, water and solids remains which was incinerated on-site, with the excess sludge hauled to off site disposal sites, usually in the U.S. As the result of a control order from the Ontario Ministry of the Environment to reduce emissions or close down, the company decided to seek an engineering solution to the problem. This report describes the development of the concept of recovering additional solvent and energy, the structure of the plant and its operation, and the performance data for the demonstration plant.

Development of a testing procedure for paints used as vapour diffusion retarders

prepared by Alberta Research Council, Industrial Technologies Dept. ; for Alberta Municipal Affairs, Housing Division, Research and Development Section. Edmonton : Alberta Municipal Affairs, Innovative Housing Grants Program, 1987. v, 44 p. : ill. Bibliogr. ISBN 0-88654-196-4
MICROLOG 89-03765 1 fiche

Recent studies have indicated that polyethylene vapour diffusion retarders and polyethylene air/vapour barriers may deteriorate prematurely due to chemical degradation caused by the loss of anti-oxidants and accelerated aging. A demonstration project of the Airtight Drywall Approach in 1984 indicated that the use of paints as a replacement for polyethylene vapour diffusion retarders found little support from the building inspection departments, largely due to the lack of appropriate technical information and standards. This study addresses these issues by developing a testing method to determine the water vapour permeance of paints and primers applied to gypsum wallboard and providing a range of permeance values of common paints and primers used in the residential construction industry.

Development of an analytical model of the hydrodynamic added mass of a ship ramming ice, vol. I : summary report

G.A. Ghoneim and M.A. Murray ; prepared for the Transportation Development Centre ; by Det norske Veritas (Canada) Ltd. Montreal : Transportation Development Centre, 1987. vi, 38, vii, 34 p. : ill. French ed. (Développement d'un modèle...) on the same fiche. TP 8393E.
MICROLOG 89-06058 1 fiche

Summary report on the development of a calibrated analytical model for the evaluation of the added mass of a ship ramming ice. The work entailed analytical modelling, full scale data analysis, model testing, and finite element modelling. Only symmetric ramming was assumed effecting surge, heave, and pitch rigid body motions. The analytical modelling task involved a literature review and the development of a preliminary model for calculating the surge, heave and pitch added

mass coefficient, and the effects of bottom proximity and ice proximity were studied. A procedure was developed for analysing the 1983 full scale ramming test data of the Canmar Kigoriak. A comprehensive model testing program of an MV ARCTIC 1:50 model and a Kigoriak 1:22.5 model produced extensive data covering rigid model free oscillation, impulsive loading, and ramming scenarios. A comprehensive 3-dimensional finite element model was developed capable of redirecting the added mass of any ship with arbitrary definition of the boundaries representing the bottom and ice proximities, the ice thickness, ice geometry and hull shape.

Development of an operations simulator for evaluation of ATCS modules : working paper

G.W. English ; prepared for Transportation Development Centre, Kingston, Ont. ; Queen's University, Canadian Institute of Guided Ground Transport, 1988. viii, 31 p. : ill. (CIGGT report ; no. 88-9) ISBN 0-88911-065-4
MICROLOG 89-04028 1 fiche

One of the major impediments to suppliers of railway signal equipment is the limited availability and high cost of in-service testing. The advantage of advanced train control systems

(ATCS) in this regard is that much of the development is systems engineering, which can be evaluated via computer simulation of a rail line's operations. This paper assesses the interest in a simulation test facility. Invitations were sent to industry, railway and government representatives to attend one of two presentations (in Montreal and in Toronto) detailing the proposed facility. Following the presentations, questionnaires were sent to the attendees, soliciting their reaction to the proposal. A market assessment and performance specifications are also given.

Development of by-product fluorogypsum for sale

Allied Chemical Canada Ltd., Mississauga, Ont. ; Allied Chemical Ltd., 1982. 2 v. : ill. Bound with: St. Lawrence Cement, Inc., Mississauga test program with allied chemical gypsum byproduct. CANMET contract: 15Q79-00156.
MICROLOG 89-01952 2 fiche

At Allied Chemical, Amherstburg, Ontario, hydrogen fluoride is produced by combining calcium fluoride with sulphuric acid, resulting in a calcium sulphate byproduct. In 1978 and 1979, investigations began at St. Lawrence Cement, Mississauga, to study the viability of using this waste byproduct as a source of gypsum in the manufacture of Portland cement. Inherent impurities made such a use impossible. Through research studies, a method was developed to remove a major portion of the impurities and beginning in October 1982, a two-phase test program using the modified gypsum byproduct was carried out to determine if the cement produced with the gypsum byproduct would meet the required specifications; to investigate if unusual variations to the chemical and physical characteristics of the finished cement would result through the use of this gypsum byproduct, and to examine if short and longer term stockpiling would effect the chemical and physical characteristics of the gypsum byproduct.

Development of cementitious grouts for post-tensioned concrete members use in offshore structures and in the Arctic environment : volume III

B.H. Levelton & Associates Ltd., Vancouver, B.C. ; B.H. Levelton & Associates, 1988. 120 p. : ill. Bibliogr. CANMET contract: OSQ84-00205
MICROLOG 89-01720 2 fiche

From information developed during Phase I of the study, a test specimen was designed to represent a typical icewall of a concrete offshore drilling structure. It contained 7 tendon ducts which contained intentional voids of various sizes, locations and types. The U.S. National Bureau of Standards, the U.S. Army Corps of Engineers, and Techno Scientific Inc. of Woodbridge, Ontario, all of whom have made recent advances in pulse-echo technology, were invited to survey the specimen to identify and locate the voids. The groups were provided with the sizes and locations of the ducts and the nature of the reinforcing, but were not given the sizes or locations of the voids in the ducts. Each group surveyed the specimen and reported their results. After completion of the testing, 2 core samples were taken from the specimen to examine the nature of the concrete and grouted duct. This report

presents the results of these tests by the three groups. The methodology of each group is also included.

Development of clean coal technologies for Alberta

Edmonton : Alberta Energy, Office of Coal Research and Technology, 1989. 12 p. : ill. ISBN 0-86499-621-7
MICROLOG 89-05188 1 fiche

Brochure describing some of the efforts of Alberta's Office of Coal Research and Technology in clean coal-use technologies. The technologies are divided into pre-combustion, combustion, and post-combustion and include liquid transportation fuels from coal, coal-water fuels, coal gasification, and emission control by limestone injection. A list of research projects completed or under way, with principal performer and status, is also included.

Development of corrosion resistant storage tanks for solar heated water

A & R Metal Industries Ltd. Ottawa : Energy, Mines and Resources Canada, Renewable Energy Branch, 1987. xi, 194 p. : ill.
MICROLOG 89-05745 3 fiche

Corrosion is the primary factor that determines the life expectancy and economic return on the capital investment in solar energy systems, where the tank for heated solar water is the most vulnerable high-value component. Metal samples were tested in potable water samples from locations where the greatest number of solar collectors were located. Water utility data was obtained and an aggressiveness index calculated for 50 states and 7 provinces in the United States and Canada. Tanks were designed and tested and redesigned to ensure efficient heat transfer and heat retention. Various types of heat exchangers were utilized, and different types of foams and coatings were analyzed.

The Development of energy conservation demonstration buildings in Alberta

Edmonton : Alberta Energy, Scientific and Engineering Services and Research Division, 1988. 9 p. : ill. ISBN 0-86499-584-9
MICROLOG 89-00883 1 fiche

During the early 1980s the Alberta/Canada Energy Resources Research Fund provided financial support for several demonstration projects related to conserving energy in buildings. Two of these projects involved buildings open to the public to acquaint people with energy conservation concepts and technologies. These two projects, the Edmonton Energy Conservation Centre and the Energy Conservation Education, are described in this booklet.

Development of gamma spectrometry system for in-situ measurement of radioactivity within piping

by A. Husain. Toronto : Ontario Hydro, Research Division, 1988. v, 35 p. : ill. Bibliogr. (Report ; no. 88-227-K)
MICROLOG 89-04676 1 fiche

The deposition of activated corrosion and fission products on reactor outcore primary heat transport (PHT) system surfaces leads to growth of gamma radiation fields around piping and other system components. To monitor such radiation field growth and decontamination planning, in-situ gamma spectrometry of PHT system components is routinely conducted. This report describes the work undertaken to develop in-situ gamma spectrometry for measuring the activity of radioisotopes within feeder pipes located in the feeder cabinets at

Pickering and Bruce Nuclear Generating Stations. Appropriate uranium metal shielding was devised and the shielded spectrometer system was evaluated in the field. To interpret spectra, the energy and distance dependence of the detector's efficiency was measured for a pipe source with surface or volumetric activity and compared with model predictions.

Development of hydrodynamic model in Cumberland Basin for tidal power applications : final report

by S. De Margerie and D. DeWolfe. Wolfville, N.S. : Acadia University, Institute, 1987. viii, 98 p. : ill. Bibliogr. (Report ; no. 34)
MICROLOG 89-05994 2 fiche

Although considerable amounts of data have been collected in the Cumberland Basin, no detailed analysis has been undertaken to investigate the effect of a barrage near the mouth of the basin. This report describes the use of a fine-grid, 3-dimensional hydrodynamic model for the tidal and current patterns for both the natural regime and a regime modified by the installation of a tidal power barrage between Peck's Point and Boss Point. As part of the study, a 28-day high quality record of water levels was collected, and this, together with a data set collected independently by Mount Allison University, was analyzed to provide the best estimates of tidal parameters. All available bathymetric soundings for the area were evaluated and corrected for changes in datum and horizontal references, to form a new consolidated bathymetric data set.

The Development of model-based estimates of unemployment for the Yukon

by G. Lemaitre. Ottawa : Statistics Canada, Methodology Branch, Census and Household Survey Methods Division, 1985. 27 p. : ill.
MICROLOG 89-03857 1 fiche

Beginning in July 1981 the Labour Force Survey was extended to the Yukon on an experimental basis. Subsequently, evaluation of the estimates obtained from the pilot survey revealed serious problems with both the survey's tracking of the Yukon population in the field and with the population projections used to weight the survey estimates. Efforts since then have concentrated largely on developing model-based approaches to estimating unemployment for the Yukon. The aim of this report is to document some of those efforts and to summarize the results to date.

The Development of new forms of work organization in Sweden

by T. Rankin. Toronto : Ministry of Labour ; Ontario Quality of Working Life Centre, 1989. 94 p. Bibliogr.
MICROLOG 89-02703 2 fiche

Over the past twenty years there have been three distinct phases in the development of new forms of work organization in Sweden. The purpose of this paper is to describe these three phases, to assess, from the perspective of Swedish management, unions and the government, their significance and to reflect briefly upon the relevance of the Swedish experience for Canada. The paper outlines some of the key characteristics of the Swedish socio-economic system with particular emphasis on the industrial relations sub-system, and makes suggestions as to what Canada might learn from Sweden's forms of work organization.

Development of physical standards for admission to police-type jobs : synthesis of three studies

by L. Cimon. Quebec : Gouvernement du

Québec, Office des ressources humaines, 1987. 16 p. : ill. (Recherche) ISSN 0832-9664 ISBN 2-550-18029-1
MICROLOG 89-05031 1 fiche

This document is a condensation of 3 studies on the development of physical standards for admission to the peace officer job category in the provincial public service, and to the provincial and municipal police job categories. Since these standards must be closely related to the tasks involved, job analyses were carried out. These analyses began with a questionnaire which was completed by 579 officers. Next, 56 officers were observed in their working environment. Examination of the results provided the necessary information to develop a series of tests which were administered to 58 officers and 56 people who represented potential candidates. The process resulted in a series of recommendations regarding the application of the tests, and produced minimum standards which would become the new physical standards for admission to the various police-type job categories.

Development of Position Sensitive Energy-Discriminating (PSED) detector for x-ray diffraction : final report

ITRES Research Limited. Calgary, Alta. : ITRES Research, 1988. ii, 57 p. : ill. CANMET contract: 79152-01-SQ.
MICROLOG 89-01735 1 fiche

Earlier experimentation was completed on the development of a position sensitive x-ray detector based on Charge Couple Device (CCD) technology. To create a system that would adequately discriminate x-ray energy levels, the noise level of the CCD readout system needed to be minimized and the ability of the CCD itself to fully collect the x-ray produced charge needed to be improved. This report summarizes the efforts made to improve the test system by both optimizing its readout mechanisms and by optimizing the CCD itself. Experimentation was done to determine the capability of the EEV Standard (P86223) CCD (3 um depletion region) and the experimental EEV High Resistivity (P8600HR) CCD (30 um depletion region). System characteristics such as system noise and charge transfer efficiency were analyzed and the system modified. Once the system performance had been pushed close to its limits, x-ray tests were performed.

Development of process controls for surimi products, part 1

CANPOLAR Consultants Ltd. St. John's : Dept. of Fisheries and Oceans, Newfoundland Region, Fisheries and Habitat Management, Fisheries Development Division, 1988. viii, 91 p. : ill. Bibliogr. (Canadian industry report of fisheries and aquatic sciences ; no. 192) ISSN 0704-3694
MICROLOG 89-04957 2 fiche

The production of refined minced fish (surimi) products has been common practice in Japan for more than 500 years, with large scale production based on Alaskan pollock beginning in the 1950s and 1960s. Currently, surimi is produced in at least 20 countries including

Canada, New Zealand, Korea, Iceland and the Soviet Union. In all cases processing is based on Japanese technology and involvement. This study documented surimi processing parameters for the development of a process control system and evaluated a number of sensing technologies for process control during surimi production. The report includes a description of the installed processing monitoring equipment, complete documentation of process data, an evaluation of the process sensors, the development of a preliminary process model, and discussion and recommendations for further work.

Development of tough ceramics : final report

by D. Ghosh...et al. Toronto : Electrofuel Manufacturing Co., 1988. 175 p. : ill. Bibliogr. MICROLOG 89-01725 2 fiche

Ceramic materials have a number of intrinsic advantages over metals, but one major flaw: low fracture toughness, making them sensitive to processing flaw size, and therefore unreliable in service. Recognizing the commercial importance of developing tough ceramics, a project was initiated to develop advanced ceramic materials for structural applications based on zirconia transformation toughening. A literature survey was conducted to select the most promising system for study; test materials were prepared by different ceramic processing techniques; and the phase compositions, microstructure, strength, and fracture toughness of these materials were characterized.

Development of troll fishery management models for southern British Columbia

by K.K. English...et al. Nanaimo, B.C. : Dept. of Fisheries and Oceans, 1987. vii, 126 p. : ill. Bibliogr. (Canadian technical report of fisheries and aquatic sciences ; no. 1526) ISSN 0706-6457 MICROLOG 89-05765 2 fiche

The recent Canada-U.S. Pacific Salmon Treaty significantly influenced the management of B.C.'s commercial and sport fisheries. This report integrates all recent and reliable information on B.C.'s major troll fishery into an analytical tool to evaluate management options. The study included extensive analyses of coded wire tag recovery data for information on the distribution and migration timing of chinook and coho stocks; assessment of whether troll catch per effort data could be used to provide in-season estimates of diversion rates for sockeye and pink stocks vulnerable to Johnstone Strait and West Coast Vancouver Island fisheries; and the organization of reliable catch, effort and fish age data for south coast sport and troll fisheries. The results of these analyses were used to update the Georgia Strait Chinook and Coho Model and develop a simulation model for the West Coast Vancouver Island troll fishery. This report presents the results of data analyses, and describes the structure and function of the West Coast Vancouver Island Management model.

Development opportunities for an Alberta plywood plant

Woodbridge, Reed and Associates. S.I. : Canada-Alberta Forest Resource Development Agreement, 1988. x, 48 p. : ill. ISBN 0-662-16367-2 MICROLOG 89-05248 1 fiche

Since early 1986, the domestic Canadian market for softwood plywood has been strong and prices have been good. In the long term, however, the competition from substitute board, modernized low cost producers and possibly U.S. suppliers is likely to be severe. An Alberta plywood producer wished to review its long term strategy in the light of this situation, therefore a study was commissioned to review the company's operations and the market outlook to identify medium and long term strategies for the plant. This report identifies the Canadian market for structural panels, supply competition for such panels, and examines speciality product opportunities to identify the most promising.

Dinosaurs and distant drums : the future for Alberta's Heritage Resources

A.G. Landals ; for Alberta Conservation Strategy Project. Edmonton : Environment Council of Alberta, 1988. 47 p. : ill. Bibliogr.
MICROLOG 89-04244 1 fiche

This paper examines the protection, management, and use of Alberta's cultural heritage resources. In this context, cultural heritage includes palaeontology, archaeology, prehistoric resources, and historic resources. Topics covered include the legislative and regulatory regime; demand and economic significance; sustainability; interactions; and improving cultural heritage management.

The Diphenylamine spot test for cellulose nitrate in museum objects

Ottawa : National Museums of Canada, Canadian Conservation Institute, 1988. 2 p. Bibliogr. (Notes ; 17-2) French ed. (Test ponctuel à la diphenylamine...) on the same fiche. ISSN 0714-6221
MICROLOG 89-06244 1 fiche

In his paper on the instability of cellulose nitrate adhesives, Koob (1982) describes the diphenylamine spot test for the detection of cellulose nitrate, a very common reagent with many chemical recipes in the literature. After studying several of these to determine the most suitable, a slight modification of Koob's reagent is recommended for the rapid detection of cellulose nitrate in any museum object or in any material proposed for museum or conservation use, not just adhesives. This note describes the preparation of the reagent, procedure of the spot test, interferences with the test, and suppliers.

Direct calculation of maximum curvature and strain in AC layers of pavements from load deflection basin measurements

by F.W. Jung. Toronto : Ministry of Transportation, Research and Development Branch, 1989. iv, 23 p. : ill. Bibliogr.
MICROLOG 89-05858 1 fiche

Deflection measurements under impulse load carried out with the Falling Weight Deflectometer (FWD) are usually processed by using elastic layer analysis programs, back-calculating layer moduli from measured deflections, and then forward-computing critical performance parameters such as stresses and strains at locations under the load. Such calculations are cumbersome and not always reliable. This report presents a more direct and more reliable way of computing some of these parameters in the top layer, especially the important value of horizontal strain at the bottom of this layer. The report computes stresses and strains for single-tire wheel and FWD-test loads; concrete pavement and pavement edges; and curvature calculation inside the contact pressure area.

Direct use of coal in blast-furnace technology

by W.P. Hutny and J.T. Price. Ottawa : Energy, Mines and Resources Canada, Canada Centre for Mineral and Energy Technology, 1987. viii, 100 p. : ill. Bibliogr. (CANMET report : no. 87-6E) ISSN 0707-5196 ISBN 0-660-13149-8 MICROLOG 89-05061 2 fiche

Investigation of processes involving coal injection into blast furnaces and an assessment of the suitability of Canadian coals for this technology. Investigations and operating data from several industrial works are reported, as well as the theoretical and practical factors influencing coal injection, particularly coal characteristics, coal combustion, and mechanical systems. Criteria for assessing coal based on volatile matter content and ash are discussed and an alternative method is proposed based on a complete characterization of pyrolysis products. CA CM NR PS SC

Directions for the school superintendency in Alberta : findings and recommendations

Superintendent Qualifications Committee (Alta.). Edmonton : The Committee, 1988. 21 p. MICROLOG 89-03367 1 fiche

In recent years, the superintendency has become more demanding and complex making the need to examine the position and define a desirable role for the superintendent increasingly clear. This study began with a survey questionnaire sent to 253 Alberta superintendents to determine the perceived role of superintendents. This report presents the recommendations of the Superintendent Qualifications Committee, in light of the survey findings together with other relevant information. Its intention is to spearhead further discussion of the issues surrounding the superintendency, with the ultimate aim of generating changes that will result in a functional and evolving role for the school superintendent in Alberta. Distance measures for speech recognition

by M.J. Hunt and C. Lefebvre. Ottawa: National Aeronautical Establishment, 1989. iv, 33 p. : ill. Bibliogr. (Aeronautical note ; NAE-AN-57) MICROLOG 89-03536 1 fiche (Available on fiche only)

Description of a method of deriving a linear transformation that can be applied to acoustic parameters for speech recognition to improve the speech sound comparison process. It consists of an extension of the pattern classification process known as linear discriminant analysis to the case when the classes are unspecified and may not be discrete. The method allows several disparate sets of acoustic parameters to be combined into a single, compact representation. Results are reported with representations called IMELDA, generated by combining parameters derived from a mel-scale filter bank. The report gives a tutorial introduction to a method of deriving an acoustic representation with only a brief account of speech recognition tests. CA PS SC TR

Distribution automnale des stades larvaires de capelan *Mallotus villosus* et de hareng *Clupea harengus* dans le nord du golfe du Saint-Laurent en octobre 1985

par P. Ouellet. Rimouski, Québec : Ministère des pêches et des océans, Direction de la recherche sur les pêches, 1987. vii, 27 p. : ill., cartes géogr. Bibliogr. (Rapport technique canadien des sciences halieutiques et aquatiques ; no 1583) ISSN 0706-6570 MICROLOG 89-02148 1 fiche

La mission avait pour objet l'étude de la distribution spatiale des stades larvaires et post-larvaires de plusieurs espèces exploitées dans la région. Elle présente donc ces résultats ainsi que l'analyse de la distribution spatiale de jeunes stades de ces deux espèces sur l'ensemble de la région nord du golfe Saint-Laurent. CF FI LS PR QU SC

Distribution de la fréquence d'occurrence des sous-séquences de nucléotides, d'après leur capacité de chevauchement

par J.F. Gentleman et R.C. Mullin. Ottawa : Statistique Canada, Direction des études analytiques, 1988. 37 p. Bibliogr. (Documents de recherche ; no 14) L'éd. anglaise (*The distribution of the...*) sur la même fiche. MICROLOG 89-02379 1 fiche

Ce document présente la distribution de la fréquence d'occurrence des sous-séquences de nucléotides, d'après leur capacité de chevauchement. Il détermine une distribution de probabilité de la fréquence d'occurrence d'une sous-séquence à l'intérieur d'une séquence de nucléotides, dans l'hypothèse où les quatre nucléotides (acides adénylique, cytidilique, guanylique et thymidilique) apparaissent au hasard et avec une probabilité égale. Distribution des spores de *Bacillus thuringiensis* en eau courante

par R. Dostie, S. Delisle et P.-M. Marotte. Charlesbourg, Québec : Gouvernement du Québec, Ministère de l'énergie et des ressources, Service des études environnementales, 1988. 13 p. : ill., cartes géogr. ISBN 2-550-19349-0 MICROLOG 89-01419 1 fiche

En 1986, le ministère de l'Énergie et des Ressources du Québec a effectué un suivi environnemental des pulvérisations aériennes contre la tordeuse des bourgeons de l'épinette. Ce rapport évalue la distribution spatiale et

temporelle des spores de B.t.k. dans l'eau prélevée en surface des ruisseaux. EV FO PR QU SC

The Distribution of carbon-14 in the oxide layer on the outer surface of an irradiated Zr-2.5wt% Nb pressure tube from Pickering unit 3

by F.R. Greening. Toronto : Ontario Hydro, Research Division, 1989. 25 p. Bibliogr. (Report ; no. 89-176-K) MICROLOG 89-06327 1 fiche

In July 1987, a pressure tube was removed from Pickering Nuclear Generating Station Unit 3 after more than 4000 effective full-power days of reactor operation. After removal, the tube was sent to Chalk River Nuclear Laboratories for inspection and analysis. The availability of samples of the tube prompted additional investigations, particularly on how much carbon-14 resides on the surface of an irradiated tube. In April 1988, oxygen additions to the nitrogen annulus gas were begun to oxidize deposited carbon-14 to $^{14}\text{CO}_2$. Measured oxidation rates, based on $^{14}\text{CO}_2$ production, fell well short of expectations, again posing the question of the distribution of carbon-14 within the reactor core. This report presents the results of studies of the outer diameter oxide on a sample of the P3 pressure tube with particular emphasis on the distribution of carbon-14 in the near surface layer. The Distribution of the frequency of occurrence of nucleotide subsequences based on their overlap capability

by J.F. Gentleman and R.C. Mullin. Ottawa : Statistics Canada, Analytical Studies Branch, 1988. 33 p. Bibliogr. (Research paper series ; no. 14) French ed. (*Distribution de la fréquence...*) on the same fiche. MICROLOG 89-02379 1 fiche

DNA's genetic code can be represented as an alphabetic sequence of 4 letters which represent the 4 types of nucleotides. This paper derives the probability distribution of the frequency of occurrence of a subsequence within a nucleotide sequence, under the hypothesis that the 4 nucleotides occur at random and with equal probability. Using the frequency distributions provided here, exact significance tests of the hypothesis of randomness were performed. An approximate test is also described for use with long sequences. CA LS SC

Distribution, abundance, and age segregation of bowhead whales in the southeast Beaufort Sea, August-September 1986

by J.K.B. Ford, J.C. Cubbage and P. Norton. Ottawa : Environmental Studies Research Funds, 1987. vii, 93 p. : ill. Bibliogr. (Environmental Studies Research Funds report ; no. 089) ISBN 0-92078-88-0 MICROLOG 89-00754 2 fiche

The bowhead whale is a large, baleen whale found only in Arctic and sub-Arctic waters. It is now one of the rarest cetaceans and is currently considered an endangered species. During August and September whales are present in areas of offshore oil exploration activity in the southeast Beaufort Sea. Aerial systematic and photogrammetric surveys were conducted in the southeast Beaufort Sea during August and September 1986, to investigate the distribution, relative abundance, and age segregation of the whales in relation to petroleum activities in the region. Two systematic surveys of the study area were completed from August 25-September 1 and September 7-14. Photogrammetric surveys of portions of the study area were conducted

from August 25-September 1. Bowhead sightings recorded by researchers and by industry personnel during 1986 were also examined. CA EV LS NO

Distribution, numbers, and mortality of grizzly bears in and around Kananaskis Country, Alberta

by H.D. Carr. Edmonton Alberta Forestry, Lands and Wildlife, Wildlife Management Branch, 1989. xi, 49 p. : ill., maps. Bibliogr. (Wildlife research series ; no. 3) ISBN 0-86499-608-X MICROLOG 89-04240 1 fiche

Evaluation of the sex and age structure of the grizzly bear population and the causes and rates of mortality, with a description of the distribution and home ranges, and an estimation of the size and density of the population. The study was initiated in 1980 in Kananaskis Country, a recreational area lying along the east slopes of the Rocky Mountains, 50 km southwest of Calgary. Trapping areas were centred on Sheep River (intended mainly for concurrent studies of black bears), and on the Highwood area. Data were obtained from 25 grizzlies snared, marked (21 radio collared), and released 46 times between 1980 and 1984. AL EV LS PR SC

Distributional impacts of personal income tax reform, 1984 to 1988

by A.M. Maslove. Halifax : Institute for Research on Public Policy, 1988. vi, 60 p. : ill. MICROLOG 89-05483 1 fiche

The purpose of this study is to analyze the distributional impact of changes in the federal personal income tax system over the period 1984 to 1988, including the major reforms introduced in 1987 and implemented in 1988. While the study assesses the aggregate fiscal impacts of reform, the emphasis is on an analysis of the gains and losses in disposable income experienced by families at different levels of income. The study also assesses the impact of reform on different types of families, including families with at least one child under the age of 18, and elderly families with at least one member aged 65 or over. The Diversification of prairie agriculture : opportunities arising from changes in the international trading environment

by W.A. Kerr. Ottawa: Economic Council of Canada, 1989. ix, 95 p. : ill. Bibliogr. (Discussion paper ; no. 359) ISSN 0225-8013 MICROLOG 89-02724 2 fiche (Available on fiche only)

The Prairie economy depends to a large extent on export markets. This study examines the economic ramifications of the Canada-U.S. Free-Trade Agreement; of a significant reduction in agricultural trade barriers arising from the current round of the General Agreement on Tariffs and Trade (GATT) talks; and the effect of a failure at the GATT negotiations resulting in more intense protectionism by the European Community. The study concentrated on the impact the changes in the international trading environment could have on the diversification and stability of Prairie farm incomes. A variance analysis was applied to measure the stability of agricultural income. Twenty-seven crop and livestock commodities were included to see if diversification from grains into other crops and livestock would stabilize Prairie farm income significantly. A base case and 7 additional trade scenarios were explored, ranging from trade liberalization to a drive towards greater self-sufficiency.

Documentation of Cathena input files for the Apollo computer

Atomic Energy of Canada Limited. Ottawa : Atomic Energy Control Board, 1988. iv, 43 p. : ill. Bibliogr. (Research report ; INFO-0295)
MICROLOG 89-05133 1 fiche

Cathena, created at Atomic Energy of Canada Ltd., is an advanced, one-dimensional thermalhydraulic computer code developed primarily to analyze postulated loss-of-coolant-accident scenarios and upset conditions for CANDU nuclear reactors. The code uses a non-equilibrium, two-fluid thermalhydraulic model to describe fluid flow. This report describes the modification of input files created for Cathena for the Apollo computer. The input files describe the RD-14 thermalhydraulic loop, the RD-14 steam generator, the RD-12 steam generator blowdown test facility, the Stern Laboratories cold water injection facility, and a

CANDU 600 reactor. Sample Cathena predictions are given and compared with experimental results when applicable

The Dogfish scourge : protecting fishing gear from shark attack

by G.V. Hurley, H.H. Stone and D. Lemon. Halifax : Dept. of Fisheries and Oceans, Scotia-Fundy Region, Fisheries Development Branch, 1987. viii, 34 p. : ill. Bibliogr. (Canadian industry report of fisheries and aquatic sciences ; no. 180) ISBN 0704-3694
MICROLOG 89-04847 1 fiche

Over the past 4 years the spiny dogfish has become an increasing menace to inshore fishermen of southwestern Nova Scotia and more recently the Eastern Shore and Cape Breton. While the best control measure is a directed fishery, limited markets for dogfish food products, both domestically and abroad, greatly restrict fishery development. An alternative control measure is the development and use of repellents or deterrents to protect gear and catches. This report reviews various aspects of shark repellent research and examines their potential for use by commercial fishermen. A review of dogfish biology, feeding habits and sensory systems is included to give perspective on shark repellents and attractants.

Doorstopper tests in waterfilled vertical drill holes

by G. Herget. Ottawa : Canada Centre for Mineral and Energy Technology, Mining Research Laboratories, 1988. iii, 3 p. Bibliogr. (Report ; MRL 88-30(TR)). MICROLOG 89-01637 1 fiche

Ground stress determinations are often carried out on the basis of strain recovery measurements where strain gauges are glued to the inside of boreholes. If the boreholes are wet or filled with water, glueing is often impossible or of poor quality unless special procedures and adhesives are used. In 1981 a number of doorstoppers were glued under water using Fleming GC 104 cement which had 1% silicone added to the resin. This report presents the results of those tests and suggests a procedure to install a doorstopper biaxial strain cell.

Doses to road transport workers from radioactive materials

by B.E. Lawrence and A. Van der Vooren. Ottawa : Atomic Energy Control Board, 1988. iii, 88 p. : ill. (Research report : INFO-0297). MICROLOG 89-05131 2 fiche

This report documents actual radiation doses received by transport workers actively involved in the shipment of radioactive materials in 1987-88. The study involved the monitoring of 31 candidates from 9 transport companies that handle medical and industrial isotopes, uranium fuel cycle materials and associated radioactive wastes. Each of the candidates was issued personal thermoluminescent dosimeter badges worn each work day for 6 months. Some were also issued "cab" or "area" dosimeters left in the cabs of vehicles or in work areas to differentiate the dose received from total personal exposure. Candidates also filled out reporting sheets at the end of each working day documenting such information as the quantity of materials handled, handling times, and vehicle size. This information and the dosimetry data were used in the development of correlations between materials handled and doses reported so that doses for other handling similar materials could be estimated.

Dry and wet testing of an automated fish sorting system which uses machine vision

by K. McCarthy. St. John's : Dept. of Fisheries and Oceans, Newfoundland Region, Fisheries and Habitat Management, Fisheries Development Division, 1988. vi, 34 p. (Canadian industry report of fisheries and aquatic sciences ; no. 191) ISSN 0704-3694 MICROLOG 89-04956 1 fiche

Grove Telecommunications Ltd. has developed a machine vision-based fish sorting system which can sort fish by species, length and weight. After actual production testing of 2 prototype units, Grove had the third and final production prototype fabricated in Ontario by a company specializing in the design and fabrication of custom conveyor systems. The system included conveyor belts, a light table and a system of pneumatically controlled chutes and gates to route different species and sizes of fish to different destinations. Upon completion of the unit, dry testing was performed to ensure the design specifications had been met before shipping to St. John's, Newfoundland. The system was then installed at Grove's development facility in St. John's where a series of wet tests were conducted to determine the accuracy and durability of the system. This report presents the results of those tests, including various mechanical difficulties and their proposed solutions.

Drying of refractory liner boards

by T.B. Cave. Toronto : Ontario Hydro, Research Division, 1988. 14 p. : ill. (Report ; no. 88-52-K) MICROLOG 89-02552 1 fiche

An Ontario company is now producing 91,000 kg/week of refractory liner boards for use by the steel industry. This industry is very competitive and the customer is highly motivated to cut his costs by using microwaves or some other electrotechnology. Laboratory tests were done to assess the feasibility of using microwaves, using about 20 samples of the product obtained from the manufacturer. Testing consisted of monitoring sample masses as they were dried by microwaves and radio frequencies at various power levels, and for comparison, by a convection oven operating at 200°C. Mass data were divided by a final sample mass obtained after overnight drying to obtain a dry basis moisture content, quoted as a percentage of the dry mass.

Dynamic stability and vibration-monitoring for no. 9 mine, M-1 dump

by Smoky River Coal Limited and Piteau Engineering Ltd. Grand Cache, Alta. : Smoky River Coal, 1988. iv, 157 p. : ill., fold. maps. Bibliogr. CANMET contract: 79024-01-SQ. MICROLOG 89-01745 3 fiche

The general practice for reclaiming mine waste dumps is to develop an overall slope not steeper than 26 degrees to assist in re-vegetation and to ensure long term stability. Increasing pressure to reduce mining costs has resulted in re-consideration of the practice of flattening repose angle slopes, or at least to delay the time of reclamation as long into the mining venture as possible. Smoky River Coal Ltd., near Grande Cache, Alberta, began mining operations on their No. 9 Mine in December 1986, at the toe of the 500-foot high M-1 waste dump, which is close to repose angle. Concerns were expressed at the effect of blasting on the stability of the dump. A previous report addressed the static stability and potential effects of blasting vibrations on

the stability of the dump. The present study was developed to extend monitoring of the dump to approximately one full year in order to assess seasonal response of the dump and to further evaluate the methodology.

The Dynamics of iceberg grounding and scouring (DIGS) experiment and repetitive mapping of the eastern Canadian continental shelf, vol. 1 : the field experiment

editors: G.J. Hodgson...et al. Ottawa : Environmental Studies Research Funds, 1988. xxvi, 316 p. : ill. Bibliogr. (Environmental Studies Research Funds report ; no. 094) ISBN 0-920783-83-7 MICROLOG 89-06081 4 fiche

The DIGS experiment was carried out concurrently with the repetitive mapping of the eastern Canadian continental shelf surveys and a submersible program on Makkovik Bank, Labrador, in August 1985. DIGS focused on the dynamics and effects of 4 iceberg groundings identified and subsequently selected from about 100 iceberg incursions onto Makkovik Bank during the study period. The DIGS program determined the iceberg forces on the seabed during the scouring events and documented the response of the seabed to these forces; the possible constraining effects of seabed contact on iceberg drift trajectories and how this contact may hydrodynamically induce sediment redistribution, and evaluated the dynamics of seafloor sediment and inferred the long-term degradation of iceberg scours due to sedimentary and biologic processes. In the mapping program, a series of sites were surveyed and mosaiced and the distribution and dimensions of iceberg scours accurately defined to serve as a basis for the establishment of a repetitive mapping network.

Echec et renouveau : l'évolution de la réglementation des monopoles naturels

par J.R. Baldwin. Ottawa : Conseil économique du Canada, 1989. ix, 140 p. Bibliogr. L'éd. anglaise (*Regulatory failure and renewal...*) : 89-04325/2. ISBN 0-660-92522-2 MICROLOG 89-04324 2 fiche

Pourquoi l'entreprise publique est-elle employée comme instrument de réglementation plus souvent au Canada qu'aux Etats-Unis? Telle est la question que cette étude examine en plus de se pencher sur les recours à la réglementation et les raisons qui expliquent l'abandon du contrat de concession initial entre l'Etat et les entreprises de services publics. On se penche particulièrement sur la réglementation des monopoles naturels, la transition du contrat de concession au tribunal de réglementation aux Etats-Unis; l'entreprise publique dans l'industrie ferroviaire au Canada: les contraintes judiciaires; et l'évolution du processus de réglementation au Canada.

Ecoclimatic regions of Canada : first approximation

Ottawa : Environment Canada, Canadian Wildlife Service, Land Conservation Branch, 1989. vii, 118 p. : ill., fold. maps. Bibliogr. (Ecological land classification series ; no. 23) MICROLOG 89-06381 2 fiche

Ecoclimatic regions are broad areas characterized by distinctive ecological responses to climate, as expressed by vegetation and reflected in soils, wildlife, and water. Within ecoclimatic regions, the ecologically effective climate will result in the development of similar trends in vegetation succession, and similar soils occurring on similar parent materials and positions on the landscape. This report presents the broad ecoclimatic regions of Canada, characterized by a brief description of the vegetation and soils on normal sites, drier-than-normal sites, and wetter-than-normal sites, along with some climatic information from a representative climatic condition. Notes on wildlife characteristic to the ecoclimatic region and land uses affecting the natural resources are also provided. A species list is included.

An Ecological approach to organizing forests for woodlot management

by P.J. Courtin, R.N. Green and G. Shishkov.
 Victoria : Ministry of Forests and Lands, 1989.
 v. 56 p. : ill., map. (Land management report ; no. 58) *Fold. map not filmed.* ISSN 0702-9861 ISBN 0-7718-8744-2
 MICROLOG 89-05283 1 fiche

This report describes an approach to woodlot management that uses the ecological characteristics of the basic unit of management, the forest stand. Through site classification, forest stands can be organized so that silvicultural treatments can be applied most effectively. The report proposes a framework organized at the levels of compartments as administrative units; subcompartments as ecologically based units with characteristic responses and sensitivities to treatment; stands as relatively homogeneous in site properties and forest cover; and working groups as stands arranged according to management objectives. Appropriate silvicultural regimes are described for the working groups, and stand map, stand description, and planning tables are provided as basic management tools.

An Economic analysis of fertilization and thinning effects on Douglas-fir stands at Shawanigan Lake

by K.M. Duke, G.M. Townsend and W.A. White.
 Victoria : Government of Canada, Canadian Forestry Service, Pacific Forestry Centre, 1989. v. 19 p. (Information report ; BC-X-312) ISSN 0830-0453 ISBN 0-662-17091-1
 MICROLOG 89-05475 1 fiche

Results of an economic analysis of the silvicultural experiment near Shawanigan Lake in British Columbia in which Y-XENO, a single-tree density-dependent growth model is used to project, from age 24 to 120 years, 9 combinations of thinning and fertilization for Douglas-fir on a poor site. Costs and benefits as a function of stand diameter are estimated, and forestry investment criteria are used to evaluate each treatment on both an incremental and a regime basis. The effect of assumptions of rising real prices and treatment of silviculture costs as an initial investment and alternatively as a harvest cost are examined.

Economic aspects of salmon aquaculture in Atlantic Canada

by N.B. Ridler and M. Kabir. St. Andrews, N.B. : Dept. of Fisheries and Oceans, Biological Sciences Branch, Biological Station, 1988. iv, 13 p. : ill. Bibliogr. (Canadian industry report of fisheries and aquatic sciences ; no. 188) ISSN 0704-3694
 MICROLOG 89-01967 1 fiche

The commercial fisheries have experienced overfishing to the extent that 11 ocean fisheries face biological collapse. Among the species involved is the Atlantic salmon, creating opportunities for aquaculture such as is already practiced in Norway, Scotland, Iceland, Ireland, the Faroes, and Canada. This report examines some economic impacts of farming Atlantic salmon, particularly in Atlantic Canada. The report examines the interrelationship between the commercial fisheries and aquaculture; the profitability of salmon farming, using both actual and hypothetical data, and the potential contribution of salmon farming to

Atlantic Canada; and analyzes the market.

Economic theory of water pricing

by R. McNeill. Vancouver, B.C. : Environment Canada, Conservation and Protection, Inland Waters, Pacific and Yukon Region, 1989. vii, 98 p. : ill. Bibliogr. MICROLOG 89-05545 2 fiche

Summary of the basic theory of optimal pricing in a water use context, avoiding mathematical analysis where possible. The concepts of producer and consumer surplus and their relevance to water pricing are explained, along with the theory of marginal cost pricing and how it can be used to achieve efficiency. The financial implications of marginal cost pricing for water utilities are then discussed and the concepts of non-uniform pricing and multipart tariffs are introduced. A pricing theory relevant to a longer run context when the issue of capital expansion should be considered is outlined to show how pricing can be used to meet costs of future expansion and to cope with problems of peak period demands. These theories are then discussed specifically in relation to water resource management in which such features as water storage, non-consumptive use, return flows, seasonal use, and constraints on natural supply must be accounted for in the pricing system.

Economics of cow-calf production in Alberta

by C. Ross, D. Chase and D. Kalief. Edmonton : Alberta Agriculture, Economics Services Division, Production Economics Branch, 1988. v, 21 p. : ill. CSI 34101.214. MICROLOG 89-01505 1 fiche

Examination of a 3-year (1984-86) period within the cattle cycle to determine the economics and profitability of cow-calf production. The study established the level of investment associated with cow-calf production, the different inputs used and the quantities required to produce a calf (yearling), and the costs, returns, profitability and relative productivity of the beef herd. Study participants were randomly selected from a list of cow-calf producers who participated in a previous 1981 study and only farms with 10 or more cows were considered, giving a total of 239 participants. These participants filled out a very detailed questionnaire, covering operator age and proprietorship, management systems, the breeding herd, breeding period and performers, the calf crop, farm size and pasture management, and assets and indebtedness. Interviews were also conducted.

Ectomycorrhizae of jack pine and green alder : assessment of the need for inoculation, development of inoculation techniques and outplanting trials on oil sand tailings

by Robert M. Danielson and Suzanne Visser : prepared for the Oil Sands Reclamation Research Program. Edmonton : Alberta Land Conservation and Reclamation Council, Reclamation Research Technical Advisory Committee, 1988. xxxiii, 186 p. Bibliogr. (Report : RRTAC 88-5)
MICROLOG 89-02225 3 fiche

Studies to characterize the mycorrhizal status of jack pine and green alder, which are prime candidates as reclamation species for oil sand tailings, and to determine the potential benefits of mycorrhizae on plant performance. This entailed determining the symbiont status of container-grown nursery stock and the quantity and quality of inoculum in reconstructed soils, developing inoculation techniques and finally, performance testing in an actual reclamation setting. Much emphasis was placed on gaining information on the fungi involved in the symbioses as little is known about the ecology of mycorrhizal fungi. Seedlings from 7 nurseries in Alberta and British Columbia were examined for mycorrhizae. Inoculum in undisturbed and stockpiled peat was assayed by using a greenhouse baiting technique and jack pine seedlings. To determine if mycorrhizae would benefit plant performance in the field, two outplanting trials were conducted; the first with jack pine and the second with jack pine and green alder. The second trial was limited in scope due to heavy winter mortality soon after planting.

L'Éducation artistique à l'école

avis au Ministre de l'éducation. Québec : Conseil supérieur de l'éducation, 1988. 53 p. ISBN 2-550-14630-1 MICROLOG 89-01474 1 fiche

Cet avis retrace et décrit les perspectives et les objectifs officiellement poursuivis par l'école primaire et secondaire en matière d'éducation artistique, de même que l'essentiel des aménagements prévus pour leur mise en oeuvre dans les écoles. Il analyse les objectifs de l'éducation artistique, leurs liens avec la formation générale de base aussi bien que leur pertinence particulière dans l'évolution actuelle de la société. De plus, il précise les difficultés découlant des dispositifs organisationnels et discerne quelques voies d'action qui permettraient d'améliorer la situation. ED PR QU

L'Éducation des adultes au collégial : en état de développement?

par P. Bélanger et N.-B. Kayembe. Québec : Gouvernement du Québec, Conseil des collèges, 1987. vii, 88 p. : ill. Bibliogr. (Collection : études et réflexions sur l'enseignement collégial) CSI 67234.200

ISSN 0831-1897 ISBN 2-550-18177-8 MICROLOG 89-01647 2 fiche

Cette étude fait le point sur le développement de l'éducation des adultes au collégial. Elle présente l'analyse des différents facteurs permettant de comprendre cette évolution tant du point de vue de l'offre de formation, du financement, des conditions d'accessibilité que du cadre organisationnel. Finalement, elle comporte une synthèse du rapport et dégage certains éléments pour une nouvelle politique d'éducation des adultes au collégial. ED PR QU ST

L'Éducation préscolaire : un temps pour apprendre

avis au ministre de l'Éducation. Québec : Conseil supérieur de l'éducation, 1987. 52 p. ISBN 2-550-13983-6 MICROLOG 89-01248 1 fiche

Cet avis comporte quatre chapitres qui contiennent des données de base sur la nature et l'évolution des services d'éducation préscolaire disponibles au Québec, de même que sur la population des jeunes enfants auxquels ces services sont destinés. Il rappelle les intentions et les choix éducatifs des services d'éducation préscolaire, les objectifs qu'ils poursuivent et le cadre d'organisation mis en place pour les réaliser. Il traite aussi des sujets suivants: la transition entre le préscolaire et le primaire, l'évaluation des apprentissages, le temps de présence des enfants et la participation des parents. ED PR QU

L'Éducation relative à l'environnement auprès des jeunes et des milieux d'enseignement du Québec

par C. Cloutier. Québec : Gouvernement du Québec, Ministère de l'environnement, 1987. i, 22 p. En tête du titre: Communications-éducation. Prononcée au Congrès annuel de la North American Association for Environmental Education. ISBN 2-550-18235-9 MICROLOG 89-01201 1 fiche

EE2000 : environmental education for a sustainable future

Alberta. Environmental Education Advisory Committee. Edmonton : Environment Council of Alberta, 1989. 26 p. Bibliogr. MICROLOG 89-06088 1 fiche

One of a series of discussion papers on various sectors within the province. This paper briefly examines the role of environmental education in helping society reach the goal of sustainable resource use. The term "education" is used in the broadest possible sense to include both the formal and informal systems of assisting individuals to acquire knowledge and skill. The paper identifies a number of important environmental education issues in Alberta and suggests some tools for dealing with these issues. It concludes by offering recommendations aimed at educators, legislators, administrators, and ordinary citizens. Also included is information on the world and Alberta conservation strategies, historical background of environmental education, and environmental education contacts in Alberta. AL ED EV PR SC

The Effect of a polymeric coating on the corrosion-fatigue of a suction roll alloy

by F.G. Hamel, J. Blain and J. Masounave Boucherville, Que. : National Research Council Canada, Industrial Materials Research Institute, 1988. 19 p. : ill. Bibliogr. MICROLOG 89-00587 1 fiche (Available on fiche only)

Most of the large modern paper making machines use suction rolls made of stainless steel alloys, which have greater strength and stiffness than the previously used bronze alloys, but an inferior corrosion-fatigue resistance. This paper investigates the use of a polymeric coating to improve the endurance of a duplex SS alloy suction roll under corrosion-fatigue conditions in a white water environment. Variables considered include cyclic frequency and stress, surface finish, and white water temperature. CA PS SC

Effect of acidic lake water on survival of aurora trout *Salvelinus fontinalis* embryos and alevins

by E.J. Snucins, V.A. Liimatainen and P.A. Gale. Toronto : Ministry of Natural Resources, 1988. 30 p. : ill. Bibliogr. (Ontario fisheries acidification report series ; no. 88-15) ISSN 0832-7629 ISBN

0-7729-5050-4

MICROLOG 89-05974 1 fiche

During the 1960s the aurora trout, a rare colour variant of the brook trout, disappeared from its native waters in northeastern Ontario. Its disappearance was attributed to acidification of the waters by atmospheric deposition of industrial emissions from metal smelters at Sudbury, Ontario. Recently, water quality in the Sudbury area has improved due to emission reductions. These experiments were designed to assess the toxicity of current water quality in the native lakes of aurora trout. During May 1984, hatchery-reared aurora trout alevins were held for 4 days in 3 of their native lakes (Whillig, Whitepine and Wilderness with pH 4.5-4.8) and a control lake, Regan Lake (pH 6.5), and survival rates were assessed. In a second bioassay, embryos and alevins were buried in the substrate at 3 groundwater upwelling sites, and survival rates were assessed. The final test involved a 14-day exposure of groundwater-reared fish to ambient conditions.

Effect of CO₂ on seamless and tubular goods

by J.D. Tyrer, S.H. Lo and R.T. Lassau. Mississauga, Ont. : Ontario Research Foundation, 1988. 2 v. : ill. Bibliogr. *Bound with: Effect of CO₂/H₂S on seamless and ERW tubular goods. Contractor: C & M Engineering Ltd. CANMET contract: 1SQ85-00099.*

MICROLOG 89-01949 2 fiche

One of the most common types of failure of tubular goods encountered in deep well drilling and enhanced oil recovery operations is carbon dioxide corrosion. This report describes the results of a corrosion investigation to determine the corrosion rates and metallurgical effects of tubular carbon steel coupons exposed to aqueous carbon dioxide/brine environments and aqueous carbon dioxide/hydrogen sulphide/brine environments under various conditions of temperature (100-150°C) and pressure. Seamless and ERW downhole tubular carbon steels were provided by Algoma Steel and IPSCO and all experiments were conducted in a 2-gallon Hastelloy C autoclave equipped with gas and liquid sampling ports, a gas injection line and magnetic stirring to provide solution agitation.

Effect of composition on the rheological properties of asphalt cement

by M.A. Poirier. Sarnia, Ont. : Esso Petroleum Canada, Research Dept., 1988. i, 81 p. : ill. Bibliogr. *CANMET contract: 79058-01-SQ.*

MICROLOG 89-04482 1 fiche

Results of a study to relate the rheological properties of asphalt to its composition and to develop guidelines for selecting crude oils for asphalt manufacture. The Corbett separation method was used to obtain compound-type fractions from Cold Lake deasphalted oil, the fractions (saturates, naphthene-aromatics, propane precipitated asphalt) were then blended with selected vacuum residues to produce 150/200 penetration asphalts, and the changes in properties from the original asphalt were determined. Properties examined included the Penetration Index, the Pen-Vis number, the low temperature stiffness, the ductility, and the glass transition temperature.

Effect of concrete moisture conditions

by C.M. Burns, K. Sampson and Y. Shunyl. Downsview, Ont. : Ministry of Transportation, Research and Development Branch, 1988. iv, 57 p. : ill.

MICROLOG 89-03835 1 fiche

One means of applying cathodic protection to reinforced concrete structures involves the use of conductive paint as an anode on the concrete surface. This report identifies the cause of adhesion failure of the conductive paint with special emphasis on the effect of moisture in the concrete upon the adhesion. Concrete test panels with and without reinforcement were prepared, then painted and exposed under a variety of moisture conditions. The reinforced concrete panels were powered at current densities typical of those encountered in the field. For the initial evaluation, a standard paint adhesion test that involved scoring and taping the paint surface was used. Other tests used on selected panels included measurement of concrete moisture content, concrete surface acidity and copper-copper sulphate half cell electrical potentials.

Effect of deformation on ferrite nucleation and growth in a plain carbon and two microalloyed steels

by E. Essadiqi and J.J. Jonas. Ottawa : National Research Council Canada, 1989. 52 p. : ill. Bibliogr.

MICROLOG 89-03251 1 fiche (Available on fiche only)

The essence of the controlled rolling of HSLA steels is to produce a fine ferrite grain size, normally achieved by finish rolling in the no-recrystallization temperature range. This study was undertaken to determine the effect of the microalloying elements Mo, Nb and V on ferrite nucleation and growth in a plain carbon and two microalloyed steels. The experiments were first carried out under dynamic conditions to study the effect of strain and strain rate on the kinetics of nucleation and growth during deformation. A second set was carried out under static conditions with different prestrains and prestraining strain rates. The approach of DeHoff was used to determine quantitatively the nucleation and growth rates.

Effect of exogenous growth substances on flowering in grafted clones of Larix

by J.P. Hall. St. John's : Government of Canada, Canadian Forestry Service, Newfoundland Forestry Centre, 1977. 11 p. Bibliogr. (Information report ; N-X-151) ISSN 0704-7657

MICROLOG 89-00168 1 fiche

Some of the problems encountered in breeding programs with conifers are the long juvenile period and the variation in levels of flowering in different years. Flowering levels have been altered by cultural methods but results have varied. In recent years physiological methods for promoting flowering have been intensively studied. A study was established in 1975 to stimulate flowering and alter sex ratios by the application of growth substances GA₃, NAA, TIBA and 6BA at concentrations of 0, 1, 10, 100 and 1000 ppm in April and May. This report presents the results of that study.

The Effect of gas supersaturated water on juvenile chinook

Oncorhynchus tshawytscha held in cages in the Nechako River, British Columbia

by D.E. Rowland and J.O.T. Jensen. Nanaimo, B.C. : Dept. of Fisheries and Oceans, Biological Sciences Branch, Pacific Biological Station, 1988. ix, 57 p. : ill. Bibliogr. (Canadian technical report of fisheries and aquatic sciences ; no. 1671) ISSN 0706-6457
MICROLOG 89-04427 1 fiche

The Nechako River, a major tributary of the Fraser River in British Columbia, supports a large salmonid population. Elevated levels of total gas pressure (TGP) were documented in the water below Cheslatta Falls, which is a barrier to upstream migration on the Nechako mainstream. In July and August 1985 and 1986, in situ studies using juvenile chinook, rainbow trout, and mountain whitefish were conducted to determine if the excess TGP was causing gas bubble trauma, a non-pathogenic response of aquatic organisms to gas supersaturation. This report discusses these studies, emphasizing the 1986 results.

Effect of high heat input on the microstructure and mechanical properties of submerged-arc welds in steels for Arctic and offshore structures

by J.A. Gianetto...et al. Ottawa : Canada Centre for Mineral and Energy Technology, Metals Technology Laboratories, 1988. iv, 46 p. : ill. Bibliogr. (Report ; MTL 88-29(TR))
MICROLOG 89-00490 1 fiche

Over the past decade advances in steel making technology have permitted the use of high heat input submerged-arc welding (SAW) for joining Arctic grade steels while maintaining acceptable weldment properties. The HAZ properties of steels used mainly for Arctic icebreakers and offshore oil and gas production platforms have been investigated by a number of workers, the major emphasis being directed toward understanding microstructure/toughness relationships. In the present study the primary objective was to evaluate the effects of high heat input welding on the microstructure and resultant mechanical properties of submerged-arc welds deposited in a range of Arctic grade steels. In order to better differentiate the microstructure/property relationships of the HAZ of candidate steels, a simulation procedure was used to isolate the CGHAZ microstructure over a larger volume for more meaningful toughness tests to be carried out.

The Effect of matrix microstructure on the abrasion resistance of high-Cr white cast irons

by S. Turenne, F. Lavallée and J. Masounave.

Boucherville, Que. : National Research Council Canada, Industrial Materials Research Institute, 1988. 9 p. : ill. Bibliogr.
MICROLOG 89-00561 1 fiche (Available on fiche only)

The abrasion resistance of high-chromium white cast iron was investigated as a function of cast iron microstructure. Different microstructures were obtained by means of heat treatment. The chromium and carbon contents were chosen in order to have different matrix microstructures (austenitic, martensitic and ferritic) with a content of 30% volume fraction of eutectic carbide (M7C3). The abrasion tests were made by using a pin-shaped sample in contact with an abrasive paper having a speed of 3.2 m/min. The two-body abrasion tests were carried out with a constant distance traveled on abrasive paper of 6 m under loads from 26.7 to 80. The wear was measured by means of mass loss

The Effect of stocking density and size sorting on the yield of *Macrobrachium rosenbergii*

by P. Niklas and J.K. Kwik. Toronto : Ontario Hydro, Research Division, 1988. iii, 38 p. : ill. Bibliogr. (Report ; no. 88-169-K)
MICROLOG 89-04562 1 fiche

Since market value is a direct function of weight, high production of prawns of uniformly large size would increase the profitability of any prawn aquaculture scheme. Survival, mean weight, variance in individual size and population structure were found to be related to stocking density. This study examined the effects of stocking density and size sorting on these parameters. The study consisted of four 8-week experiments in which prawns from 0.2-27.4 g were stocked at densities from 5-225 animals/sq m. Prawns from previous experiments were reused in subsequent experiments to simulate an 8-week sorting cycle in a 32-week growout period. An optimization index based on the parameters affecting stocking density was formulated and a model, defining the optimum densities for maximum production of prawns grown in the intensive culture system presently used, was derived from the optimization index.

The Effect of urban air quality on visibility, phase I : comprehensive research and monitoring protocol

by F. Barlow...et al. Edmonton : Alberta Environment, Research Management Division, 1988. xvi, 81 p. : ill. Bibliogr. (RMD report ; L-103)
MICROLOG 89-00366 1 fiche

A comprehensive research plan was developed to study the effect of urban air quality on visibility. A number of measurement techniques and analytical procedures were developed and tested. Specifically, the KAPS-impactor system has been developed to separate particulate and gaseous pollutants with a minimum of alteration in particle composition and with size fractionation of the particulates. As well, analytical procedures were developed to

produce vertical profiles of aerosol concentrations and a numerical model of Mie scattering was developed to calculate extinction coefficients due to scattering and absorption by aerosols from data collected with a research aircraft. Finally, irradiance instruments were tested, procedures for calculating aerosol loading were derived and optical depth was calculated.

Effectiveness of a sound deterrent in excluding gizzard shad at Lambton TGS : preliminary laboratory and field results

by P.H. Patrick and R.S. McKinley. Toronto : Ontario Hydro, Research Division, 1988. iii, 14 p. : ill. Bibliogr. (Report ; no. 88-103-K)
MICROLOG 89-04450 1 fiche

Fish impingement at Ontario Hydro generating stations caused operational problems such as unit deratings or shutdowns, especially at Lambton Thermal Generating Station, where 60 incidences have occurred during 1983 and 1984 alone as result of gizzard shad impingement. One strategy developed to reduce impingement exploits the behavioural responses of fish to various stimuli, such as light and sound, as a potential relatively inexpensive means of handling fish. This report determined the effectiveness of a sound stimulus in reducing the capture of gizzard shad at Lambton's intake and was conducted in two phases in the winter of 1986-7. The first phase was conducted in the laboratory and determined the roles of both sound pressure level and frequency in eliciting a response from shad. The second phase was done in the vicinity of the station's intake and discharge and evaluated the response of shad to sound under field conditions. Both fishdrones and hammers were used.

The Effectiveness of redundant color-coding on search and identification in a process-control task

by R.M.T. Jubis and D.C. Turner. Downsview, Ont. : Defence and Civil Institute of Environmental Medicine, 1988. 20 p. : ill. Bibliogr. (DCIEM research report ; no. 88-RF-10)
MICROLOG 89-03650 1 fiche

The relatively recent development in colour-graphics cathode ray-tube (CRT) displays has reawakened an interest in the effectiveness of colour as a means of coding information. A major concern is whether redundant colour-coding is more beneficial than shape-coding in terms of efficient performance, and whether the potential advantage outweighs the cost of implementing colour-graphics. This study investigates the effectiveness of redundant colour-codes and monochrome shape-codes for coding the operational states of scanpoints displayed on a CRT-displayed process-control diagram.

Effects of acid precipitation on lake and river ecosystems in Quebec : review of Department of Fisheries and Oceans research activities, 1981-85

Mont-Joli, Que. : Ministère des pêches et des océans, Direction des sciences biologiques, Institut Maurice-Lamontagne, 1987. ix, 65 p. : ill. Bibliogr. (Canadian technical report of fisheries and aquatic sciences ; no. 1554) ISSN 0706-6457
MICROLOG 89-00404 1 fiche

Review of research activities carried out in Quebec by the Department under its Acid Precipitation Study Program. Physicochemical surveys of lakes made it possible to identify the areas in the Precambrian Shield that are the most sensitive to acidification and those that are subject to the highest levels of acid deposition. This report briefly reviews the results of a study on the response to acid precipitation of a subwatershed of the Escoumains River, as well as an overview of surveys of invertebrate and fish communities, the results of experiments conducted in the field on flesh metal concentrations, incubation of salmon eggs and fry and in the laboratory on lethal and avoidance doses of aluminium. The 5-year research outlook is also included.

Effects of acidic precipitation and related pollutants in the terrestrial environment : a program description

by W.D. McIlveen and S.N. Linzon. Toronto : Ministry of the Environment, Air Resources Branch, 1988. 26 p. : ill. ISBN 0-7729-4067-3
MICROLOG 89-00127 1 fiche

Under the Environmental Protection Act, the Government of Ontario established that the Ministry would provide for the protection and conservation of the natural environment within the Province. This protection applies to property, plant and animal life. Thus, when pollutants of anthropogenic origin (including acidic precipitation and photochemical oxidants) were suggested as having a role in the deterioration of North American crops and forests, the Ontario Ministry of the Environment initiated investigations into this problem. This was carried out under the auspices of the Acid Precipitation in Ontario Study (APIOS). This document outlines the objectives and scope of those programs.

Effects of aerial application of the herbicide glyphosate on forest ecosystems, part 2 : a summary of the 2.5 L/ha spray application, 1985-88

by V.L. Henderson, D.L. Wotton and S.F. Phillips. Winnipeg : Dept. of Environment and Workplace Safety and Health, Terrestrial Standards and Studies, 1988. v, 114 p. : ill. Bibliogr. (Report ; no. 88-5)
MICROLOG 89-03326 2 fiche

A 3-year research study was initiated in the spring of 1985 to study the direct effects of aerial application of the herbicide glyphosate on the vegetation in the boreal forest region of southeastern Manitoba near Pine Falls and indirect effects on wildlife utilization of the treated habitat. Four permanent study areas were established, two treated and two control, at Sandy River West. Standard methods were used to assess botanical and wildlife parameters and plant abundance and physical condition were documented for each species in the vegetation plots. Songbirds, small mammals and ungulates were studied to determine their responses to habitat alterations induced by the herbicide. The fate and persistence of glyphosate was monitored through analysis of foliage and soil samples and mylar sheets were

used to estimate actual spray deposition

Effects of attachment thickness and weld profile on fatigue life of welded joints

by O. Vosikovskiy, R. Bouchard and A. Rivard.
 Ottawa : Canada Centre for Mineral and
 Energy Technology, Metals Technology
 Laboratories, 1988. ii, 21 p. : ill. Bibliogr
 (Report ; MTL 88-4(TR))
 MICROLOG 89-00489 1 fiche

The thickness effect derived from tests of joints with equal base and attachment plate thicknesses was incorporated into European design and construction standards for offshore structures in 1984. At present it is being adopted into the Canadian offshore standard. To see whether benefits from reduced attachment thickness and improved weld profile would be sufficient to justify a major research program aimed at quantification of these benefits, a small exploratory test series designed to estimate the potential life improvements has been completed. Two sets of heavy-plate T-joints with load-carrying welds and attachment thickness equal to half of that of the base plate were tested. The first set had regular 45-degree welds, the second set had welds with an AWS improved weld profile. The results, compared with data from the recently completed Canadian research program on thickness effect in fully scaled up joints with 45-degree straight welds are presented in this report.

The Effects of black army cutworm on backlog reforestation efforts in the North Thompson Valley

by T.F. Maher. S.I. : Forest Resource
 Development Agreement, 1988. vi, 15 p. : ill.
 Bibliogr. (FRDA report ; 022) ISSN 0835-
 0752 ISBN 0-7718-8623-3
 MICROLOG 89-01783 1 fiche

The black army cutworm (BAC) recently became a pest in newly established coniferous plantations throughout the central interior of the province. Reforestation efforts have been steadily increasing, with emphasis placed on the planting of backlog areas (harvested more than 3 years ago) which at present are "not satisfactorily stocked" (NSR). Because of the large amount of NSR land, the consistent association of BAC infestations with recent broadcast burning, and the high proportion of broadcast burned sites with a recorded history of BAC populations, a problem analysis was undertaken. This report presents the results of that analysis, conducted through a literature review of scientific reports and history records of both the Canadian Forestry Service and the B.C. Forest Service; resurveying of 4 plantations damaged by the BAC; and interviewing of all personnel actively engaged in BAC research within the province.

Effects of burning and mechanical site preparation on growth and nutrition of planted white spruce

by T.M. Ballard and B.C. Hawkes. Victoria :
 Government of Canada, Canadian Forestry
 Service, Pacific Forestry Centre, 1989. vii,
 19 p. Bibliogr. (Information report ; BC-X-
 309) ISSN 0830-0453 ISBN 0-662-16863-1
 MICROLOG 89-05119 1 fiche

Study to evaluate, by means of foliar analysis and internode measurement, the effects of prescribed burning and associated mechanical site preparation on spruce nutrition and height growth, and to develop practical models to predict these effects. Since there was insufficient time to impose treatments, establish plantations, and evaluate results it was necessary to evaluate established plantations where different treatments had previously been

done on adjacent or nearby sites. Sampling was therefore limited to adjacent burned and unburned sites (Cutoff Road site), an area divided into plots subject to different, measured impacts of burning (the McLeod Lake plots), and areas where growth and nutrition can be evaluated within and between burned windows (Boomerang and Carp Lakes).

Effects of crude oils on arctic marine invertebrates

by J.A. Percy and T.C. Mullin. Victoria : Dept.
 of the Environment, Beaufort Sea Project,
 1985. iv, 167 p. : ill. (Technical report ;
 no. 11)
 MICROLOG 89-04073 2 fiche

Recent developments in the Canadian Arctic indicate that the present understanding of both short- and long-term consequences of oil pollution upon arctic marine ecosystems is far from adequate. This study deals mainly with the question of just how susceptible certain invertebrate components of the marine inshore ecosystem are to experience significant disruption by oil pollution. Physical and biological variables that are likely to play an important role in modifying the ecological impact of a spill are briefly discussed. Behavioural studies were carried out to investigate the responses of several species to the presence of crude oil masses, crude oil tainted food and crude oil contaminated sediment. Oil-animal interactions discussed include interaction with sub-ice oil lenses, with oil dispersed in particulate form in the water column, and with oil trapped in bottom sediments. Effects considered include short-term lethal, sublethal physiological, and behavioural-integrative effects, with emphasis on the last two effects.

Effects of decreasing the air temperature rise during the on-cycle of a burner in a forced air downdraft tobacco stick-kiln : preliminary report

by D.L. VanHooren and M.J. Columbus.
 Toronto : Ministry of Agriculture and Food,
 Agricultural Energy Centre, 1987. 18 p. : ill.
 (Energetics)
 MICROLOG 89-01133 1 fiche

Two high profile, forced-air, downdraft tobacco stick-kilns were selected, both of relatively tight construction. Each kiln was equipped with a Balthes N-750 burner unit fuelled by natural gas and rated at 790 MJ/h at a manifold pressure of 2.1 kPa. The volume of gas flowing into the test kiln was reduced manually by throttling the valve between the gas solenoid valve and the burner. The degree of throttling was dependent upon the air temperature. The test kiln and the control kiln were loaded on adjacent days and monitoring was done for maximum and minimum air temperatures during cycling of the burner, fuel energy input, mass of cured tobacco, and general data such as weather and any unusual occurrences during each cure. During the harvest season, 3 sets of cures were monitored. Seconds, fourths and under-tips were cured in the 1st, 2nd and 3rd cures of each kiln, respectively.

The Effects of sleep deprivation and exercise on heart rate during recovery sleep

by R.M.T. Jubis and R.J. Heslegrave.
Downsview, Ont. : Defence and Civil Institute of Environmental Medicine, 1988. 16 p. : ill.
Bibliogr. (DCIEM research report ; no. 88-RR-43)
MICROLOG 89-01214 1 fiche

Based on recent findings that sleep following exercise is sometimes characterized by more slow-wave sleep and higher heart rate (HR) levels compared to sleep not following exercise, it is argued that exercise depletes bodily resources, and these cortical and autonomic changes reflect the need for enhanced restitution during sleep. Prolonged sleep loss produces similar cortical and autonomic effects. This study investigated whether sleep loss or exercise would independently increase HR during the next available (recovery) sleep

period, and whether sleep loss plus exercise would have a synergistic effect on HR. HR was measured during baseline sleep and during recovery sleep following exercise with regular sleep, 65 hours of sleep loss with exercise, and 65 hours of sleep loss without exercise.

Effects of the exposure of birds to insecticides used for grasshopper control in Alberta

edited by A.W.L. Hawley and J.D. Somers.
Vegreville, Alta. : Alberta Environmental Centre, 1988. v, 69 p.
MICROLOG 89-05681 1 fiche

The widespread use of insecticides for grasshopper control in Alberta during 1984 and 1985 generated concern over the potential impact of that practice on wild bird populations. This report presents the results of 3 studies that considered different routes through which birds could be exposed to carbaryl, dimethoate or carbofuran applied for grasshopper control. The first study investigated the effect of physical application of the test insecticides onto gamebirds; the second measured the persistence of insecticides in grasshoppers, a foodstuff for gamebirds and gulls; and the third study was a pilot project conducted to investigate the consumption of carbofuran-contaminated grasshoppers by gulls in the field.

Effects of wolf predation on recruitment of black-tailed deer on northeastern Vancouver Island

by I.W. Hatter. Victoria : Ministry of Environment, Wildlife Branch, 1988. ix, 82 p. : ill. Bibliogr. (Wildlife report ; No. R-23)
ISSN 0829-7797 ISBN 0-7726-0941-1
MICROLOG 89-06168 1 fiche

Columbian black-tailed deer populations, one of the most popular big game species on northern Vancouver Island, showed marked declines during the 1970s, coincident with a major increase in numbers of wolves. This study tested the hypothesis that wolf predation was the primary cause. An area located within a moderate wolf density region on the island was selected for intensive study from 1980-82. Deer were collected in May by shooting, although road-killed deer were also examined. Efforts were made to collect fawns and does. Each specimen was weighed to the nearest pound and external measurements recorded in centimetres. The mandibles, both kidneys, and one femur were removed and frozen for age dating. Tissue samples were taken from all the major organs for examination. The reproductive tract was removed from females and the number and sex of fetuses, forehead-rump length, chest girth, hind foot length, and weight were recorded. During September and November 1980-81 hunters were requested to have their deer weighed, the chest girth and

hind foot length measured, and the lower mandible removed for aging by wear-class.

Electoral history of British Columbia, 1871-1986

Elections British Columbia. Victoria : The Branch, 1988. vii, 558 p. Bibliogr. ISBN 0-7718-8677-2
MICROLOG 89-01049 6 fiche

This document provides an historical overview of electoral activities in British Columbia during the 115 year period from 1871 to 1986. It contains detailed election results, party abbreviations, elected candidates, and data on plebiscites and referenda. Also included are details on chief electoral officers, royal and special commissions on elections, the history of election law, controverted and voided elections, women members of the Legislative Assembly, Premiers of British Columbia, and sessions of the Assembly.

Electric vans in courier service : second six-month progress report

by D. Hsu and J. Duncan. Toronto : Ministry of Transportation, Transportation Technology and Energy Branch, 1988. vi, 64 p. Bibliogr.
MICROLOG 89-01617 1 fiche

The Ministry is conducting an over-the-road evaluation of two General Motors Griffon electric vans to establish an understanding of the behaviour, reliability, life cycle cost, and operational limitations of electric vehicles in routine urban traffic. This report describes the second 6-month vehicle operation in courier service, as well as the cumulative 12-month operational results. Data is collected on vehicle distance, electricity consumption, heater fuel consumption, maintenance cost, and ambient temperature.

Electrical and electronics manufacturing industry : human resources study

Ottawa : Employment and Immigration Canada, 1987. xix, 123 p. : ill. CSI 21133.221. ISBN 0-662-15503-3
MICROLOG 89-02891 2 fiche

The study identifies technological and market developments and the nature of their effects on the sector's occupational requirements and supply. From these, it draws human resource planning adjustment implications. It assesses aggregate employment effects of these changes over the next 5 years and identifies training adjustment needs based on the analysis. The study focuses on industry profile and employment outlook, the new technologies, changes in skill requirements, adjustment patterns in the industry, and human resource planning implications.

Electrical surface resistance of used ventilation tubing

by K.J. Judge and K.J. Mintz. Ottawa : Canada Centre for Mineral and Energy Technology, Mining Research Laboratories, 1988. iii, 11 p. Bibliogr. (Report : MRL 88-89(TR))
MICROLOG 89-01640 1 fiche

A number of explosions in underground coal mines led many countries to require that nonmetallic materials used be made antistatic. The usual method employed for quantifying the antistatic property is the measurement of electrical surface resistance. For about 12 years, antistatic ventilation materials were certified in Canada on an ad hoc basis using the National Coal Board method for flat materials and a CENELEC Standard for curved materials. Recently, the Canadian Standards Association established a technical committee to develop a consensus standard for the flammability and antistatic properties of ventilation materials. A number of technical questions arose, one of which is the subject of this report. Samples of used 60 cm diameter flexible ventilation tubing were obtained, some scrubbed lightly, washed and dried, some were used without cleaning, and unused samples

were also used as reference. The samples were conditioned and tested inside an environmental chamber set at the desired humidity and temperature, using the National Coal Board and CENELEC standards.

Electrocatalytic, surface and semiconducting properties of reactively sputtered cobalt oxide

by L.C. Schumacher. Toronto : Ontario Hydro, Research Division, 1989. iv, 23 p. : ill. Bibliogr. (Report ; no. 89-114-K)
MICROLOG 89-06329 1 fiche

The cobalt containing defect perovskites are one class of nonstoichiometric oxides which have shown high activity as aqueous O₂

reduction electrocatalysts in alkaline media. While reasonable behaviour with porous gas diffusion electrodes has been obtained, problems with low oxide conductivity and poor mass transport remain. Consequently, the true electrocatalytic properties of these oxides is yet to be determined. To address this issue, atomic sputtering was employed to produce several ternary mixed oxides containing cobalt, and the semiconducting and electrocatalytic properties of these systems were determined. Before doing this however, it is necessary to characterize the surface, and the electrocatalytic and semiconducting properties of sputtered cobalt oxide by itself, as the simple oxide (when doped) is a good O₂ reduction/evolution catalyst. This report gives the results of such a study.

Éléments de docimologie, fascicule 1 : l'évaluation pédagogique : une démarche

Québec : Gouvernement du Québec, Ministère de l'éducation, Direction générale du développement pédagogique, 1985. 29 p. Bibliogr. ISBN 2-551-09002-4
MICROLOG 89-03996 1 fiche

Ce fascicule a pour but de décrire le cadre général dans lequel s'insèrent les diverses

composantes de l'évaluation pédagogique. En plus de situer l'évaluation pédagogique dans le contexte scolaire actuel, on présente l'évaluation formative et l'évaluation sommative. On y présente aussi l'évaluation pédagogique comme une démarche comportant trois étapes, la mesure, visant à recueillir, organiser et interpréter les informations pertinentes, le jugement, s'appuyant sur les résultats de la mesure, et la décision, tenant compte des jugements posés et des actions possibles.
ED PR QU

Éléments de docimologie, fascicule 2 : lexique

Québec : Gouvernement du Québec, Ministère de l'éducation, Direction générale du développement pédagogique, 1985. 23 p. ISBN 2-551-09003-2
MICROLOG 89-03995 2 fiche

Ce lexique contient des termes relatifs au domaine de la mesure et de l'évaluation des apprentissages. L'index alphabétique comporte la liste des termes définis et des synonymes les plus souvent utilisés et l'index thématique regroupe les termes reliés à une question donnée.
CU ED PR QU

Éléments de docimologie, fascicule 3 : l'évaluation formative

Québec : Gouvernement du Québec, Ministère de l'éducation, Direction générale du développement pédagogique, 1988. 118 p. Bibliogr. ISBN 2-551-09004-0
MICROLOG 89-03997 2 fiche

Dans ce document, on présente l'évaluation formative en tant qu'intervention pédagogique visant la réalisation des apprentissages. On commence par la définir, puis on la situe par rapport à certaines conceptions de l'apprentissage et de l'enseignement. De l'importance est accordée par la suite à la planification de l'évaluation formative. On explique finalement comment actualiser cette démarche d'évaluation lors de la recherche et de l'analyse de l'information.
ED PR QU

Éléments de docimologie, fascicule 4 : l'évaluation sommative

Québec : Gouvernement du Québec, Ministère de l'éducation, 1988. 80 p. Bibliogr. ISBN 2-551-08207-2
MICROLOG 89-02925 1 fiche

L'évaluation sommative est le type d'évaluation employé à la fin d'un cours, d'un cycle ou d'un programme dans un but de classification, d'évaluation du progrès ou dans l'intention de vérifier l'efficacité d'un programme ou d'un cours. On y distingue les trois étapes de la démarche d'évaluation: mesure, jugement et décision. On identifie la décision à prendre et prévoit le déroulement des différentes étapes. Par la suite, on explicite comment prendre les informations pertinentes puis comment porter les jugements sur lesquels s'appuieront les différentes décisions.

Elevated temperature fatigue-creep behavior of nickel-base superalloy in 625 -- Rev.

by T. Bui-Quoc. Boucherville, Que. : National Research Council Canada, Industrial Materials Research Institute, 1986. 40 p. : ill. Bibliogr. MICROLOG 89-00567 1 fiche (Available on fiche only)

Superalloy Inconel 625 is a potential candidate material for use in structural components subjected to cyclic loadings at high temperatures, such as parts of jet engines and nuclear reactors. This report discusses the results of a research program carried out to provide the mechanical properties on the low-cycle fatigue and creep-fatigue behaviour of IN 625 at elevated temperatures (650 and 815°C). Under continuous cycling, the data base of the material is established and the influence of hold-times introduced in each cycle (interspersed creep-fatigue) on the material life is then examined. A life prediction procedure recently suggested was applied to the data obtained under cyclic loading, with and without hold times. The overall correlation between isothermal experimental results and theoretical predictions is discussed.

L'Energie atomique du Canada, limitée : les stratégies d'une société d'Etat au sein d'un marché mondial oligopolistique

par G. Lerner. Ottawa : Conseil économique du Canada, 1987. xii, 85 p. Bibliogr. ISBN 0-660-92110-3
MICROLOG 89-04335 2 fiche

Ce document répond à deux questions: quel rôle convient à l'entreprise publique en tant qu'instrument de la politique publique et comment devrait être structuré l'appareil de contrôle au sein du gouvernement afin de tirer le meilleur parti possible de cet instrument? Finalement, on présente une évaluation des coûts et des avantages du système CANDU et on examine le recours à une entreprise publique pour la mise au point et la commercialisation d'une technologie complexe.

Energy analysis of Canadian external trade, 1971 and 1976

by K.E. Hamilton. Ottawa : Statistics Canada, Analytical Studies Branch, 1988. 18 p. Bibliogr. (Research paper series : no. 11) French ed. (Analyse énergétique du...) on the same fiche. CSI 01100.221
MICROLOG 89-02307 1 fiche

The scale and structure of external trade in goods and services has profound effects on the overall energy intensiveness of any economy. This study is concerned with the comparison of the energy required to produce the bill of goods which Canada exports with the energy savings associated with the import bill of goods. To examine the energy consumption patterns before and after the oil shock of 1973, the study looks at shifts in the intensity of energy use in the commercial sector between 1971 and 1976, and decomposes these shifts to compare effects due to trade with other structural changes.

Engineering geology of the Great Bear River area, Northwest Territories

by K.W. Savigny. Ottawa : Energy, Mines and Resources Canada. Geological Survey of Canada. 1989. iv, 55 p. : ill. Bibliogr. (Paper : 88-23) ISSN 0068-7650 ISBN 0-660-13127-7
MICROLOG 89-05121 1 fiche

Results of an engineering geology study of the Great Bear River valley in the Northwest Territories. Great Bear River drains Great Bear Lake from its southwest end near Fort Franklin, flowing westerly for 115 km to its confluence with Mackenzie River near Fort Norman. In the early 1970s, the hydroelectric potential of the Great Bear River valley and several alternative pipeline, railroad and road crossing locations were being investigated by private agencies. Engineering geology studies were initiated in 1973. The information reported here is based primarily upon examination of stratigraphic sections exposed along Great Bear River and laboratory analysis of samples taken from the exposures. These studies describe the stratigraphy of surficial deposits and the general scheme of major Quaternary events.

Enhancements to the HASTUS crew scheduling algorithm

by J.-M. Rousseau, R. Lessard and J.-Y. Blais. Montreal : Université de Montréal, Centre de recherche sur les transports. 1987. 25 p. Bibliogr. (Publication : no. 321)
MICROLOG 89-00013 1 fiche

The bus driver scheduling problem in a transit company involves establishing, at minimum cost for each day of the week, a list of workdays which assign a driver to each bus in the timetable and respect all clauses in the union contract. In the approach discussed here it is assumed that the bus schedule is known and that once the list of feasible workdays is established, the problem is solved. This paper updates the description of the HASTUS algorithm. Basic terminology and related rules are given, as well as the general mathematical programming formulation used. A relaxation of the problem is given, with a solution approach.

Enquête sur la condition et la performance physique des jeunes francophones du Nouveau-Brunswick âgés de 6 à 12 ans, 1985-86

rédigé par Normand Gionet, Lionel Saulnier. Fredericton : Ministère de l'éducation, Moncton, N.-B. : Université de Moncton, Ecole d'éducation physique et de loisir, Institut de leadership, 1988. 57 p. *CSI 45104.201* ISBN 0-88838-750-4
MICROLOG 89-05815 1 fiche

L'enquête a pour but de répondre aux questions relatives à la condition et la performance physique des jeunes garçons et filles âgés de 6 à 12 ans fréquentant les écoles élémentaires françaises du Nouveau-Brunswick, à savoir: leur condition physique; leur niveau de performance physique; et les effets de l'âge et du sexe sur leurs résultats. De plus, l'enquête donne le taux de participation des classes et des jeunes par district scolaire et la répartition selon l'âge et le sexe des jeunes qui ont participé à l'enquête.

Enrollment by school, 1988-89 : statistics

New Brunswick. Dept. of Education. Fredericton : The Dept., 1989. 61 p. *Bilingual (Inscriptions par école...)*. CSI 45104.004. ISBN 0-88838-571-4
MICROLOG 89-02200 1 fiche

This statistical publication is a list of all the public schools in the province with their corresponding number of pupils and teachers. The tables provide statistical information on enrolment, full time equivalent teachers, and number of schools by levels. It also contains the lists of schools in the francophone and anglophone sectors. Each sector is preceded by a map of the school districts. The heading for each district gives the name of the superintendent, the address, and phone number of the school board office. The schools in each district are listed according to the grades taught, enrolment, and full time equivalent teachers by language of instruction.

Entrepreneurs in education : Canada's response to the international human resource development challenge

by D. Simpson and C. Sissons. Ottawa : International Development Research Centre. 1989. x. 101 p. Bibliogr. (Technical study ; 62e) ISBN 0-88936-527-X
MICROLOG 89-06069 2 fiche (Available on fiche only)

Highlights the changing world of human resource development (HRD) and explores possible responses from private and public sector organizations in Canada. The key message of this study is that unless Canadian institutions are prepared to consider new approaches to program development, financing, and organizational structures, developing-country institutions looking for Canadian assistance and

aid agencies requiring Canadian capacity to deliver their programs will be faced with a major resource problem. It discusses what is necessary to increase and improve the international HRD capacity of Canadian institutions. It also looks at how market forces are affecting HRD activities and examines developing Canadian centres of excellence. Finally, it explores the impact of changing HRD demands on a variety of issues.

Enumeration and coded-wired tagging of coho salmon *Oncorhynchus kisutch* smolts leaving Black Creek, French Creek and the Trent River, Vancouver Island, during 1988

by R.J. Fielden, G.J. Birch and J.R. Irvine. Nanaimo, B.C. : Dept. of Fisheries and Oceans, Biological Sciences Branch, Pacific Biological Station. 1989. xii. 85 p. : ill. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences ; no. 2018) ISSN 0706-6473
MICROLOG 89-05250 2 fiche

It is estimated that accurate recruitment assessments could lead to a 20% increase in the harvest rates of Pacific salmon. This estimation resulted in an intensive investigation of recruitment rates and escapement estimation to improve the management of the resource. This report presents the results of a coho salmon smolt enumeration and coded-wire tagging program conducted in Black Creek, French Creek and the Trent River from April-June 1988 as part of a stream indexing study on Vancouver Island that began in 1985. The study documented the size and timing aspects of juvenile coho migration from Statistical Area 14 streams and, through coded-wire tagging of emigrants, improved the understanding of subsequent ocean migration routes and timing, catch incidence and production dynamics. Downstream movements of juvenile coho and other fish were monitored in each study stream through a screen V or double V-type fence and live box trap. Daily catches of juvenile coho were sampled for fork length, weight, eye diameter and scale age.
● BC CA CF FI SC

Enumeration and coded-wire tagging of coho salmon *Oncorhynchus kisutch* smolts leaving Black Creek, Vancouver Island, during 1978 and 1979, their subsequent distribution in sport and commercial fisheries, and escapement to the creek in 1978-1980

by D.G. Clark and J.R. Irvine. Nanaimo, B.C. : Dept. of Fisheries and Oceans, Biological Sciences Branch, Pacific Biological Station. 1989. viii. 45 p. : ill. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences ; no. 2017) ISSN 0706-6473
MICROLOG 89-05251 1 fiche

Management of British Columbia's salmon fishery is hampered by a lack of accurate, long-term information on smolt production, catch distribution and escapement returns for individual stocks. This is especially true for

coho salmon. Because it is not practical to monitor the smolt production and escapements of many small coho-producing streams, streams are monitored that are representative of others in the same geographical area. Black Creek has been designated as a key stream for wild coho salmon populations on the east coast of Vancouver Island. This report summarizes studies conducted on Black Creek between 1978 and 1980 when 2 smolt runs were enumerated and tagged with coded-wire nose tags (1978 and 1979) and 3 escapement runs were enumerated (1978, 1979, and 1980) to evaluate the productivity and contribution of wild stocks prior to major fish production facilities being established as fisheries enhancement efforts.

Environmental Assessment Program Improvement Project, phase 1 : recommendations for improvements to the current program

Toronto Environment Ontario. 1989. i, 28 p. ISBN 0-7729-5945-5 MICROLOG 89-05181 1 fiche

The Environmental Assessment Program Improvement Project (EAPIP), launched in April 1988, is examining ways to improve the Environmental Assessment (EA) Program through comprehensive changes in legislation, regulation, policies, guidelines, and administrative practices. In Phase I of the project, EAPIP staff evaluated a list of proposals for improvements originating from earlier comments to the EA Branch and Branch experience in administering the EA Act. Improvements selected for the Phase I report were further reviewed by inter-ministry committees. Those finally chosen are of administrative nature, and for implementation will require the Act to be amended. This Phase I report recommends 9 improvements requiring amendments to the EA Act, including 4 to make current procedures more simple and flexible, 4 to clarify parts of the EA Act, and one to increase regulatory authority.

Environmental monitoring of the Bay of Fundy salmonid mariculture industry during 1986 and 1987

by D.J. Wildish...et al. St. Andrews, N.B. : Dept. of Fisheries and Oceans, Marine Fish Division, Biological Sciences Branch, Biological Station, 1988. iii, 44 p. Bibliogr. (Canadian technical report of fisheries and aquatic

sciences : no. 1648) *This is the one hundred and ninety-ninth technical report of the Biological Station, St. Andrews, N.B.*. ISSN 0706-6457
MICROLOG 89-01251 1 fiche

The Bay of Fundy salmonid mariculture industry during 1986-87 was concentrated in the Western Isles region, especially the lower L'Etang Inlet. This study monitored particulate pollution in sediments beneath selected farm sites: seasonal phytoplankton abundance in the Western Isles region from May-November 1987; and reassessed the effect of pulp mill effluent discharges in the L'Etang to determine if any changes had occurred from a previous study in 1986

Environmental persistence and migration of pentachlorophenol, wood pole preservative, part I : literature review

by W.P. Mortimer. Toronto : Ontario Hydro, Research Division, 1989. iii, 23 p. Bibliogr. (Report : no. 88-258-K)
MICROLOG 89-04309 1 fiche

Pentachlorophenol (PCP) is widely used by the electric utility industry as a wood preservative for transmission and distribution poles. Low levels of PCP are now ubiquitous in the Canadian environment and both federal and provincial regulators have been reviewing its status and uses. Ontario Hydro, anticipating possible challenges to the continued use of PCP as a pole preservative, has initiated a study into the potential for migration of PCP away from pole installations, and has installed test poles treated with alternative preservatives. This report contains a literature review of the environmental contamination and toxicity of PCP, the degradation processes, results of fugacity modelling of PCP pathways (Level I and II), a review of the research to date on the migration of PCP from treated utility poles, and a summary of the research trends in this area.

Environmentally acceptable disposal of wastes from vegetable processing industries

by C.S. Papadopol and J.D. Nolan. Atlanta, Ga. : Food Processing Waste Conference, 1987. 13 p. Bibliogr. Presented at the Food Processing Waste Conference.
MICROLOG 89-02370 1 fiche

An opportunity to integrate disposal needs with the recycling potential of a forest plantation was offered by the upgrading of treatment facilities of Cobi Foods in London, Ontario, a plant that produced fast frozen peas and corn in summer and french fries from stored potatoes in winter. Encroaching housing developments around the plant made the previous effluent disposal procedure objectionable (irrigation over cornfields), mostly because of odour and wind drift of aerosols. This report presents information on the demonstration and assessment of the technical and environmental feasibility of effluent polishing as well as determining the behaviour of forest species, particularly fast growing poplar and willows in plantations, when the effluent is used as a growing medium.

An Epidemiological approach to road crashes and injuries in Quebec : nature, severity, direct costs, data quality and record linkage

by C. Laberge-Nadeau, R. Bourbeau and J. Granger. Montreal : Université de Montréal, Faculté de médecine : Centre de recherche sur les transports, 1983. xxii, 307 p. Bibliogr. (Publication : no. 352)
MICROLOG 89-00016 4 fiche

Analysis of a sample of 1008 persons injured in road accidents in 1974 to explore the accuracy of road accident statistics and to obtain a classification of victims by severity of injuries. Police and hospital reports were compared, all information being gathered in the records of the Third Party Liability Service of the Quebec Health Insurance Board. Using the results, corrected figures were produced for provincial transport statistics. An Injury Severity Score was computed for each victim, indicating severity of injury, area injured, and most common injuries. Costs of medical services were estimated for the average in-patient and out-patient.

The Equality game : women in the federal public service, 1908-1987

by N. Morgan. Ottawa Canadian Advisory Council on the Status of Women, 1988. iii, 70 p. Bibliogr. French ed. (*Jouer à l'égalité...*) : 89-03032.1. CSI 22306.206. ISBN 0-662-16193-9
MICROLOG 89-01083 1 fiche

Despite women's progress towards equality in the labour market, women constitute only 8.7% of the Executive category and 13.2% of the Senior Management category. This paper explains this phenomenon by proposing three hypotheses upon which the analysis is based. First, it understands the situation by examining women as a complex and diverse group in relation to men. Second, it places the situation of women within the subculture of the federal public service organized around an internal power. Finally, it takes into consideration that while two jobs may have equal pay, they are not necessarily equal in responsibility and authority. The information in this document is based on a series of annual reports, data, and regulations dating from the turn of the century to the present, together with interviews with 52 men and women in public service.

Equilibrium conditions for the 3-facility Hotelling model in a tree

by H.A. Eiselt and G. Laporte. Montreal Université de Montréal, Centre de recherche sur les transports, 1989. 8 p. Bibliogr. (Publication : no. 609)
MICROLOG 89-02531 1 fiche

Since Lerner and Singer's (1937) critique of Hotelling's (1929) spatial model, it is known that the 3-facility Hotelling model on a linear market has no equilibrium. It has been proved that, given equal prices at all facilities, the case of 3 facilities is the only one for which no locational equilibrium exists, since in a linear market, the two peripheral facilities can both gain additional market areas by moving towards each other, thereby reducing the market area of the third facility located between the other two. If the 3 facilities are located on a tree rather than a line, the market of the central facility is not necessarily reduced to zero so that this facility may not gain by relocating and a stable equilibrium may exist. Conditions for such an equilibrium are derived.

Essai sur la caractérisation et l'évaluation du drainage naturel des sols : cas de l'Abitibi-Témiscamingue

par J.-P. Ducruc et V. Gerardin. Québec : Gouvernement du Québec, Ministère de l'environnement, Direction du patrimoine écologique, 1988. xii, 105 p. : ill. Bibliogr. (Série de l'inventaire du capital-nature : no 9) Sur la couv.: *Planification écologique*. ISBN 2-550-19205-2
MICROLOG 89-04980 2 fiche

Le drainage naturel du sol est un élément essentiel de la connaissance écologique du territoire mais sa détermination est une opération complexe qui fait intervenir de nombreux paramètres souvent difficiles à maîtriser. Cet essai est une première démarche pour combler cette lacune. Tout d'abord, il souligne l'importance de bien caractériser le drainage aux fins de cartographie écologique, et décrit et définit les paramètres écologiques essentiels à la détermination du drainage. Ensuite, il propose une façon de reconnaître les classes de drainage tout en évitant de reprendre la démarche mentale de l'écologue ou du pédologue.

Establishment of operating parameters for effective mechanical dewatering of wood residues

prepared for Energy, Mines and Resources Canada, Renewable Energy Division : by B.H. Levelton & Associates Ltd. Vancouver, B.C. : B.H. Levelton & Associates Ltd., 1988. viii, 128 p. : ill. Bibliogr.
MICROLOG 89-05734 2 fiche

Study addressing the lack of fundamental understanding of dewatering of wood residues and the need for more information on the type and performance of equipment currently used. Data on the operation of dewatering presses was obtained from suppliers and equipment users and resulted in a basis for designing a test program and for assessing the results that were measured in the laboratory. Tests were done at a laboratory scale to investigate platen, ram, and roller presses, which are now used in some form in commercial dewatering presses. The laboratory results were correlated using a simple dewatering model. The results of the test program information obtained from users of dewatering presses and the fundamental understanding of dewatering obtained from a theoretical analysis were used to recommend means of improving existing presses and developing a new conceptual design.

Estimation and variance estimation for the bilateral sub-system to produce air scheduled international passengers origin and destination statistics

by R. Carpenter, M.A. Hidiogrou and M. Latouche. Ottawa : Statistics Canada, Methodology Branch, Business Survey Methods Division, 1986. 55 p.
MICROLOG 89-02448 1 fiche

In the Air Scheduled International Passenger Origin and Destination Survey, calculation of the standard deviation and the coefficient of variation is a long, complicated process, very inconvenient for the users of the estimates who need speed. These users would therefore like to have a rapid method of computing the coefficient of variation. This study developed an efficient method of approximating the coefficients of variation without using actual sample data excepting market size. The method was then used to construct no more than 6 tables and charts containing the coefficients of variation cross-classified with a limited number of variables. The study was based on scheduled international flight data for 1982, examining variables for passenger volume, type of flight, airports of origin and destination, and carrier and proration percentage.

Estimation of long-term probabilities for inadvertent intrusion into radioactive waste management areas : a review of methods

by W. Eedy and D. Hart. Ottawa : Atomic Energy Control Board, 1988. 73 p. : ill. Bibliogr. (Research report ; INFO-0275)
MICROLOG 89-00740 1 fiche

Radioactive wastes of various types in Canada are currently, and likely will be, disposed of by means of shallow, intermediate and deep geologic disposal. If institutional controls lapse, there is a finite probability that accidental intrusion into one of these sites may occur, with the public health significance depending upon the nature of the intrusion and the consequent radiological or chemical exposure that may occur. This study reviews and discusses methodologies that various groups have used or may use for estimating the probabilities of various scenarios of inadvertent human intrusions into different types of waste disposal facilities.

Estimation procedures for fracture parameter distributions

by A.H.C. Chan and A.L. Punhani. Toronto : Ontario Hydro, Research Division, 1988. i, 39 p. : ill. Bibliogr. (Report ; no 87-277-K)
MICROLOG 89-02583 1 fiche

In evaluating a plutonic rock mass as a permanent nuclear waste repository host site, it is necessary to predict the groundwater flow through the fracture network in the rock. Since the data on fractures are sparse and expensive to collect, Monte Carlo simulations were used instead, requiring the probability distributions of fracture parameters. In this report, procedures are devised to estimate these probability distributions, computer codes are provided, and the procedures are illustrated by examples using data from the Atikokan test site and the Underground Research Laboratory.

Ethanol from potato wastes

by Carnation Food Ltd., Energy, Mines and Resources Canada, and Manitoba Energy and Mines. S.I. : Wardrop Engineering Inc., 1988. ii, 84 p. MICROLOG 89-00963 2 fiche

Ethanol is produced conventionally from molasses, grains and ethylene, with the cost of the feedstock being a significant component. An opportunity exists to produce ethanol economically using waste materials at Carnation Foods' Carberry plant, a major potato processing facility. This study evaluates the use of solid materials after some preprocessing, and clean liquid streams following preconcentration using membrane technology, for the production of ethanol. Energy efficient technologies such as mechanical vapour recompression and high temperature heat pumps were considered for distillation, and the use of waste starch from Old Dutch Foods' Winnipeg plant was evaluated. A market and technology assessment is presented, along with a conceptual design, cost estimates, and a financial analysis.

Evaluating the impact of price incentives on adoption of technology and production patterns in the Ontario wheat industry

by V.C. Lamy. Ottawa : Agriculture Canada. Policy Branch. 1989. x. 97 p. Bibliogr. (Working paper ; 4 89)
MICROLOG 89-05055 2 fiche

The Ontario wheat industry produced mainly soft white winter wheat until 1986, when price incentives encouraged the development and adoption of new varieties of hard red spring wheat especially suited to the needs of the milling industry and traditionally supplied by western Canada. The area planted to hard red spring wheat expanded at the expense of soft white winter wheat, barley and corn. This paper examines the extent to which price incentives, through the two-price wheat policy, introduced distortions in the Ontario wheat industry. A linear programming model of the industry was developed, using assumptions about the use of historic cropping ratios, production costs, yields and relative profitability, and the proportion of wheat that goes into the feed and the food markets. The paper also deals with the results of relaxing the cropping ratio constraint or abolishing the two-price wheat program or both together.

Evaluation de l'environnement acoustique

par R. Hawley. Ottawa : Travaux publics Canada, Services d'architecture et de génie, 1988. xii, 83, xii, 75 p. : ill. Bibliogr. (Série sur l'évaluation du rendement des immeubles : Document D08) *Bilingue (Acoustic environment...)*.
MICROLOG 89-01906 2 fiche

La réussite ou l'échec d'un environnement acoustique est lié au type d'endroit et à son usage. Comme ces derniers varient avec le genre d'immeuble, il en est de même pour le niveau prévu du rendement acoustique. Ce document traite des cinq plus importants éléments qui peuvent être quantifiés dans l'environnement typique des bureaux: niveaux

sonores ambiants, propagation du son dans les bureaux à aires ouvertes, temps de réverbération, perte de transmission à travers les cloisons et perte d'ouïe causée par le son. Chaque aire d'investigation est divisée en 3 étapes, chacune débutant par une étude des plans et archives, pour ensuite se diriger vers les techniques de mesures acoustiques simples puis, plus spécialisées avec de l'équipement sophistiqué. On identifie ensuite les conditions propices aux problèmes et examine leur impact sur les occupants.

An Evaluation of Bruce NGS A unit 2 boiler room air inleakage using tracer gas techniques

by T. Jarv. Toronto : Ontario Hydro, Research Division, 1989. 11 p. ill. Bibliogr. (Report ; no. 89-195-K)
MICROLOG 89-06318 1 fiche

During the May 1987 Bruce Nuclear Generating Station A outage, the containment pressure test and the corresponding leak search revealed high ethylene tracer gas concentrations in the boiler rooms, particularly those of Unit 2. As a result of the boiler room findings, an inleakage experiment was undertaken on the Unit 2 boiler rooms. The success of this experiment was contingent on the ethylene concentration in containment being low enough to allow the measurement of any increase due to inleakage from the boiler rooms. The inleakage test was completed on April 30, 1989. This report presents the experimental details, results and discussion, and conclusions and recommendations.

Evaluation of filters using spectrofluorimetry and CNC methods

by H. Leung and M. MacKay. Toronto : Ontario Hydro, Research Division, 1988. 14 p. : ill. (Report ; no. 88-173-K)
MICROLOG 89-02542 1 fiche

Test uranine aerosols are used to study aerosol transport in the stacks of nuclear generating stations. The present method of analysis involves the collection of aerosol on filters followed by analysis for uranine using a spectrofluorimetric technique. This procedure is labour-intensive and involves significant time delays. An alternative approach involving the use of real-time aerosol detection using a Condensation Nucleus Counter is under consideration. This report compares the two methods in the laboratory.

Evaluation of fish passage through culverts at the Goose Creek road crossing near Churchill, Manitoba, in April and May, 1977

by A.J. Derksen. Winnipeg : Dept. of Natural Resources, 1980. xi, 103 p. ill. maps. Bibliogr. (Manuscript report ; no. 80-4)
MICROLOG 89-00689 2 fiche

During the course of the Lake Winnipeg, Churchill and Nelson Rivers study, some special problems were anticipated in the Churchill River estuary as a result of Manitoba Hydro's Churchill River Diversion project. One of the concerns was the relocation of a service road crossing Goose Creek, used for recreational fishing. Monitoring was done to measure daily water velocities through the major culverts in the crossing and to determine the effect of these velocities on fish moving upstream into Goose Creek during the spring run-off either to spawn or feed. Monitoring began on April 27 and terminated May 20, 1977. This report presents the results from 1977.

Evaluation of health status of Rocky Mountain sheep in southeastern British Columbia, *Ovis canadensis canadensis*

by H.M. Schwantje. Victoria : Ministry of Environment and Parks, Wildlife Branch, 1988. vii, 55 p. : ill. Bibliogr. (Wildlife bulletin ; no. B-58) ISSN 0829-9560 ISBN 0-7726-0879-2
MICROLOG 89-02345 1 fiche

Three herds of Rocky Mountain bighorn sheep in southeastern British Columbia were evaluated for health status during 1983 and 1984. Each herd was of similar size but varied in disease occurrence and herd dynamics, both historically and over the period of study. Samples taken from 6 sheep in each herd were examined for

nutritional condition, microbiological, virological and serological status, general and pulmonary parasite loads, blood chemistry and trace mineral levels, as well as gross and histological lesions.

Evaluation of heat affected zone and weld metal toughness in selected steels, phase II : final report

by C. Chiu, L. Malik ; prepared by Materials Technology Centre, Kanata, Ont. : Fleet Technology Ltd, Materials Technology Centre, 1989. 3 v. Bibliogr. Contents: Vol. 1 : Submerged arc welding program -- vol. 2 : Gas metal arc welding program -- vol. 3 : Flux cored arc welding program. CANMET contract: OSQ85-00137.
MICROLOG 89-06203 6 fiche

Volume 1 reports on an assessment of a series of submerged arc welds prepared using 2 different wire-flux combinations giving weld metals alloyed with Ti-B, and Mo respectively and using different procedural variables such as heat input, post weld heat treatment, interpass temperature and joint restraint. Volume 2 explains the CVN and CTOD toughness of 4 gas metal arc welds prepared using Argon-5% carbon dioxide shielding gas and 3 consumable wires giving weld deposits alloyed with Mn-Mo, Mn-Si, and Ti-B respectively. All welds were made at 3.0 kJ/mm heat input, and the one with Ti-B weld metal was examined in the stress relieved condition also. The welds were examined for composition, strength, microstructure and inclusion distributions. Volume 3 examines a series of 14 welded assemblies prepared using the gas shielded flux cored arc welding process to examine the effect of welding procedural variables on weld metal toughness. All the welds were made using one of 3 different commercially available consumables and the Ar-25% CO₂ gas shielding. Procedural variables studied included heat input, post weld heat treatment, and welding position lateral joint restraint. Their influence was assessed by microstructure characterization, deposit composition, CVN and CTOD toughness.

Evaluation of heavy oil recovery process using a novel combination of injectants : final report

by M.I.S. Azzam. Oakville, Ont. : Sheridan Technical Associates Inc., 1989. 120 p. : ill. Bibliogr. CANMET contract: 79061-01-SQ.
MICROLOG 89-04483 2 fiche

Results of a laboratory study of the displacement of heavy oil by a combination of hot water and gas. The study was based on bench scale, non-scaled, core displacement experiments using heavy oil from Alberta (Pelican Lake) and Saskatchewan (Buffalo Coulee). The effect of a range of operating variables (injection temperature, water injection rate, gas injection rate and back pressure) and interactions (oil/gas/permeability interactions and oil/additive/connate water salt concentration) were investigated. The potential roles of a soluble gas (CO₂) and of interfacial additives (sodium hydroxide and a petroleum sulfonate additive TRS 410) were evaluated. The Hot Water-Gas Drive process was also evaluated by comparison with steamflood reference experiments. The experimental program was statistically designed to enable quantitative assessment of the data. An oil recovery enhancement index was defined, and consistently used in the statistical analysis of the experimental results.

An Evaluation of MTC specifications for tree planting and maintenance techniques : interim report

W.R. Witherspoon, G.P. Lumis ; prepared for J.E. Gruspier. Downsview, Ont. : Ministry of Transportation and Communications, Research and Development Branch, 1987. ii, 56 p. : ill. Bibliogr.
MICROLOG 89-03148 1 fiche

There are conflicting reports in the literature regarding the best methods of transplanting trees on the roadside, although most of the studies deal with climates and species not typical of Ontario. A study was therefore undertaken to provide definitive answers, and to validate or improve MTC specifications. In early 1985, test plantings were made of ash and spruce, and a variety of backfill, pruning, mulching/weed control, and staking treatments were applied. This interim report describes the experimental design and reports the results obtained in the 1985 growing season.

Evaluation of occupational exposure to waste anesthetic gases in Ontario hospitals

by P.L. Pelemear...et al. Toronto : Ministry of Labour, Health and Safety Division, Health and Safety Support Services Branch, 1987. vi. 237 p. Bibliogr.
MICROLOG 89-05540 3 fiche

Study to review the occupational health concerns of workers exposed to waste anesthetic gases in hospitals and determine whether the findings in the literature are supported; to review the waste anesthetic gas exposure levels in Ontario hospitals; and to recommend corrective measures to control workers' exposure. The study was conducted from 1981-85 through a questionnaire survey in 100 hospitals throughout Ontario. A walk-through survey of all locations of potential exposure was conducted by an industrial hygienist in a representative sample of 74 hospitals providing surgical services. Air sampling was conducted, observing operating room protocol, and including long-term air sampling for halocarbon vapours (halothane, enflurane and isoflurane), and nitrous oxide sampling by direct reading instruments. The industrial hygiene assessments included an evaluation of the mechanical dilution ventilation, the scavenging system and documentation of the equipment used to administer anesthesia at the time of the assessment.

MICROLOG 89-00981 1 fiche

Paper dealing with recent advances made towards understanding the microstructure/property relationships of weld heat-affected zones in high-strength HY80, HY100 and HSLA80 steels. Simulated coarse-grained heat-affected zone structures were produced as a function of weld energy input to compare the microstructures and resultant notch toughness properties of steels being considered for naval applications. The targeted notch toughness properties for the heat-affected zones were obtained from consideration of current military standards for submarine construction MIL-STD1688(SH) and weld metal consumable qualification MIL-E-23765.2C.

Evaluation of the payback for the solar DHW system at Craigwiel Gardens apartments

Solcan Ltd. Ottawa : Canada Mortgage and Housing Corporation, 1988. 9 p. : ill.
MICROLOG 89-04277 1 fiche

Solcan Ltd. designed and installed a solar hot water system on the Craigwiel Gardens Senior Citizens Apartments in Ailsa Craig, Ontario. There are 47 apartments in the one floor building, with approximately 50 occupants in total. The solar water heating system was designed to supplement the building's domestic hot water requirements which are normally

supplied by electricity. This report evaluates the performance of the system.

Evaluation of the roles and the responsibilities of, and the relations between the major partners of the 1988 Manitoba Games

by K. Shepherd. Winnipeg : Sports Directorate, 1989. 46 p.
MICROLOG 89-04772 1 fiche

This evaluation of the 1988 Manitoba Games assesses the understanding and acceptance of the roles and responsibilities of the Manitoba Sports Directorate and its partners: the provincial sport governing bodies, the regional sport development associations, the provincial final host committee, and the recreation directors of the province. Many of these bodies were working together for the first time. This evaluation provides recommendations on how the roles and responsibilities of the partners and the communications network between the partners can be improved. Interview questions were developed on partner responsibilities to each other, communications, and the role as partner in the Games. Interviews were conducted with administrators and key volunteers, as well as 5 recreation directors of the province.

Evaluation of two search radar systems for detection of ice masses

by K. Klein, J.P. Ryan and M. House. Ottawa : Environmental Studies Research Funds, 1988. xv, 279 p. : ill. Bibliogr. (Environmental Studies Research Funds report ; no. 091) ISBN 0-920783-90-2
MICROLOG 89-01228 4 fiche

Interest in improving current airborne iceberg surveillance capability for ice management in support of offshore oil exploration has resulted in experiments with search radar systems, initially developed for military use. Prior to 1986, imaging radars, whose process made the distinguishing of icebergs and ships difficult, were used. Systems evaluated are manufactured by Litton Systems Canada Ltd.:

the APS 504(V)3 model is currently in use and the APS 504(V)5 is a new system. The program tested the radar's surveillance capability to detect icebergs under different conditions as opportunities presented themselves during normal operations; developed a model specific to each radar system which extrapolated overall performance from the individual cases actually observed; and collected signal data from both radars to investigate the radar properties of icebergs and the ocean. Emphasis was placed on the detection of smaller icebergs, particularly bergy bits and growlers.

MICROLOG 89-05141 2 fiche

The continuing interest of the Toronto Board of Education in collecting information about the academic progress of students in relationship to their social and demographic characteristics has resulted in Every Student Surveys dating back to 1970. The current survey was undertaken in response to a request from the Board's Race Relations Committee. It includes data on students' background by gender, race, family structure, and socio-economic status. Unlike previous surveys at the secondary level, this one includes all secondary students, not only those in Grade 9. Items dealt with in the survey include: socio-demographic characteristics; program placement; student achievement regarding credit accumulation and school marks.

Evolution of limnological conditions in lakes of the Nelson and Rat-Burntwood River systems after Churchill River diversion and Lake Winnipeg regulation, I : an overview

prepared by Douglas J. Ramsey ; in collaboration with Laureen Livingston, Ian Hagenson and David J. Green, Winnipeg, Manitoba Natural Resources, Fisheries, 1989. vi, 93 p. : ill. Bibliogr. (Manuscript report ; no. 89-15)
MICROLOG 89-05889 2 fiche

Studies were initiated of the limnology of Rat and Threepoint lakes on the Churchill River diversion and of Cross, Sipiwek, Split, and Stephens lakes on the Nelson River in 1985. The hydrologic regimes of these lakes were altered by Lake Winnipeg Regulation or Churchill River diversion or by both developments. This report summarizes the water quality data collected through 1987 and the phytoplankton and zooplankton data collected through 1988 and compares them to pre-development data reported by the Lake Winnipeg, Churchill, and Nelson Rivers Study Board, providing an overview of the changes in water quality and in the phytoplankton and zooplankton communities which have occurred in the lakes following hydroelectric development. The effects of changes in analytical methodology which may confound the interpretation are also considered. Limitations of the pre- and post-development data which restrict the scope of the report's conclusions are identified and types of new or existing data collection and analysis which could minimize or eliminate these restrictions are suggested.

An EW perception of requirements for maritime sensor and weapon integration

by A. Sowards and B. Barry, Ottawa : Defence Research Establishment Ottawa, 1988. xi, 36 p. : ill. Bibliogr. (Technical note ; 88-26)
MICROLOG 89-01312 1 fiche

Recent events have demonstrated the need for information produced by all the sensors available on a ship to be integrated. This paper discusses the advantages to be obtained from the integration of sensor data and the co-ordination of hard-kill (missiles, guns) and soft-kill (ECM, decoys, chaff) weapons systems. Problems of integration of information from different sensors, the need for a layered defence, the characteristics of the various systems, a typical scenario to illustrate the need for integration, possible architectures, and issues that must be addressed are examined.

Report on Phase 3 of a 5-phase experimental and theoretical study program of the Canadian nuclear waste disposal concept. This phase deals with the near-field thermal regime in a buffer-backfill disposal vault in which the nuclear fuel waste is emplaced in canisters and is studied through the use of a 1/8 scale experimental model. The experimental data is compared with the predictions made by the computer code TRUCHAM, developed by Ontario Hydro for analyzing the transient and coupled heat and moisture flow through unsaturated media. An overview and review of previous work is also given. EN ON PR PS SC

Experimental evaluation of catalyst deactivation caused by asphaltene adsorption : final report

by A.L. Court, D.W. Soveran and C. Jackson. S.I. : NewGrade Energy Inc., 1988. vi, 79 p. : ill. CANMET contract: OSQ85-00308 MICROLOG 89-05077 1 fiche

It is suspected that the asphaltene component of heavy oil feedstocks plays a major role in reducing catalyst activity, although there has been limited investigation of the effect of asphaltene molecules on catalyst activity. Two fresh catalysts were impregnated with asphaltene material derived from Athabasca bitumen using different combinations of temperature, pressure, asphaltene concentration and type of solvent in the impregnation techniques. The catalyst's activity was measured in a bench-scale hydroprocessing unit using a blend of pure components for a feedstock. The effect of the impregnation techniques was evaluated by determining the amount of unconverted material in the liquid products and by measuring sulphur conversion. Two catalysts from heavy oil hydrocracking experiments were also evaluated for activity. • CA CM NR PS SC

Experimental evaluation of flow measurement techniques in the OHRD Tritium Laboratory

by C.H. Cheh. Toronto : Ontario Hydro, Research Division, 1988. iii, 100 p. : ill. Bibliogr. (Report ; no. 88-53-K) MICROLOG 89-02579 2 fiche

Description of a series of tests carried out to experimentally evaluate the applicability of various techniques for measuring air flow and air movement. The ultimate application sites for the chosen technique are Ontario Hydro's nuclear generating stations and the Darlington Tritium Removal Facility. In order to evaluate the most appropriate techniques, a series of tests were carried out involving measurements made using Laser Doppler Anemometry, Hot Wire Anemometry, smoke flow visualization, and a tracer gas. The report contains quantitative data on the velocity measurements made, with a detailed specification of the equipment which would be required to carry out such measurements in the application areas. Experimental flying squid fishery off British Columbia, 1987

by G.S. Jamieson and G.D. Heritage. Nanaimo, B.C. : Dept. of Fisheries and Oceans, Fisheries Research Branch, Pacific Biological Station, 1988. iii, 79 p. : ill. Bibliogr. (Canadian industry report of fisheries and aquatic sciences ; no. 186) ISSN 0704-3694
MICROLOG 89-00997 1 fiche

Experimental fishing for flying squid in 1987 was conducted from both a Japanese and a Canadian vessel in northeastern Pacific waters, primarily off the coast of British Columbia, and to a lesser extent off Oregon and Washington outside the American 200-mile Extended Economic Zone. Experimental fishing to date has used drift gillnets, although some limited jigging was conducted in 1987. This report presents the daily fishing results and a general analysis of the 1987 data for the third year of a study designed to document and evaluate the nature of the catch associated with limited fishing of a commercial nature. The report does not include detailed biological information on the species caught nor an interpretive analysis of fishing in relation to observed oceanographic parameters.

Experimental results of a Darrieus type vertical axis rotor submerged in a water current

by T.D. Faure. Ottawa : National Research Council Canada, Division of Mechanical Engineering, 1984. viii, 52 p. : ill. Bibliogr. (Technical report ; TR-HY-005)
MICROLOG 89-03266 1 fiche (Available on fiche only)

Description of model tests performed on vertical axis, straight blade, Darrieus type rotors, used to extract energy from fast flowing waters. Ducted turbines with a shroud around the rotor are investigated in configurations simulating free stream (no head) and ultra low head (low dam developing 1-2 m head full scale) situations. In addition, a full scale prototype turbine installed in the St. Lawrence River at Cornwall, Ontario, as a field experiment, is described, and test results provided. The turbine characteristics are shown in terms of efficiency, discharge coefficient, and power coefficient. Test results are compared with theoretical prediction algorithms developed during the study.

Experimental seining and netting in the north basin of Lake Winnipeg, 1963 to 1967, with special reference to sauger and whitefish

by W.N. Howard. Winnipeg : Dept. of Natural Resources, 1980. vi, 58 p. : ill. Bibliogr. (Manuscript report ; no. 80-7)
MICROLOG 89-00690 1 fiche

In the summer of 1967, an experimental seining and netting project was conducted in the north basin of Lake Winnipeg to indicate whether a predator-prey relationship existed between sauger and young whitefish and to learn more about the life history and frequency of occurrence of sauger in Mossy Bay. A hoop seine 4 ft. in diameter equipped with a 12 ft. bobbinet bag was used to capture young whitefish. Standard net gangs were used to take fish samples for stomach analysis and general sampling.

An Experimental study of transonic buffet of a supercritical airfoil with trailing edge flap

by B.H.K. Lee and F.C. Tang. Ottawa : National Aeronautical Establishment, 1988. xi, 80 p. : ill. Bibliogr. (Aeronautical note ; NAE-AN-54)

MICROLOG 89-01163 1 fiche (Available on fiche only)

Investigations into methods for buffet alleviation for supercritical airfoils are virtually non-existent. In order to gain more insight into the effects of flaps on buffet intensities and delay of buffet onset at transonic conditions, a wind tunnel investigation of a supercritical airfoil with a trailing flap was carried out. This report gives a brief description of the experimental arrangements and the procedure for data processing. The main emphasis is on the presentation of data which shows the effects of flap angles on buffet characteristics of this airfoil. The conclusions derived from these results are in general believed to be applicable to other supercritical airfoils.

An Experimental study on evaporation and combustion of single droplets of CWS

by Z.Q. Zhou, G.D.M. MacKay and J.H. Greenblatt. Halifax : Technical University of Nova Scotia, Centre for Energy Studies, 1987. 30 p. : ill. Bibliogr. CANMET contract: OST85-00086.
MICROLOG 89-04525 1 fiche

The combustion of coal water slurry (CWS) droplets, distinguished from the combustion of pulverized coal and the combustion of coarse fuel particles in a FBC burns fuel with high water content (30% usually). This paper presents a theoretical analysis and laboratory experimental work on the evaporation and combustion of single droplets of CWS. The experimental work consisted of setting up a CWS droplet generator, and studying the evaporation and combustion of CWS in a drop tube furnace.

Exploitation of arctic fishes

by R. Crawford. Winnipeg : Dept. of Fisheries and Oceans, Central and Arctic Region, 1989. v. 43 p. : ill. Bibliogr. (Canadian manuscript report of fisheries and aquatic sciences : no. 2002) This is the 7th manuscript report from the Central and Arctic Region, Winnipeg. ISSN 0706-6473
MICROLOG 89-03040 1 fiche

Brief synopsis of the present status of fish exploitation in northern Yukon, the Northwest Territories, and northern Quebec, beginning with an historical perspective and overview of northern Canada's fish resources, followed by considerations of the domestic, commercial, and sport fisheries. Because of regional differences, important commercial fisheries are considered separately. Estimates of past and present levels of exploitation are included for those species where such information is available. The domestic and commercial use and potential of some of the marine fishes are considered, along with a summary of trends in the landings of these fisheries. The report concludes with an assessment of the current state of affairs in the Arctic fisheries.

Exploratory study on pervaporation membranes for removal of water from water-crude oil emulsions : final report

Advanced Membranes Inc. Ottawa : Advanced Membranes Inc., 1989. 27 p. : ill. CANMET contract: 79238-07-SQ.
MICROLOG 89-05126 1 fiche

Study to explore the feasibility of removing water from oil/water (O/W) and water/oil (W/O) emulsions by means of pervaporation. Initial study involved preparation of simulated O/W and W/O emulsions prepared by mixing water and kerosene of various concentrations and stabilized by adding sodium lauryl sulfate. Preliminary experiments were conducted on 12 membranes fabricated from 2 different materials. One membrane of each type of material was chosen for further work based on the results of the preliminary tests. All experiments were carried out under 2 different downstream pressures and various temperatures.

The Export of nutrients from surface coal mines

by K.D. Ferguson and S.M. Leask. West Vancouver, B.C. : Environment Canada, Conservation and Protection, Environmental Protection, Pacific and Yukon Region, 1988. xix, 127 p. : ill., maps. (Regional program report : 87-12)
MICROLOG 89-00459 2 fiche

Elevated levels of the nutrients nitrogen and phosphorus in the aquatic environment can cause excessive growth of algae and toxicity to

aquatic organisms. A study by Pommen (1983) at the Fording coal mine in southeastern British Columbia in 1979-80 found that up to 6% of the nitrogen content of the explosives used at the mine released to the receiving environment, although subsequent studies of water quality near the coal mines suggested the Pommen formula may overestimate. This study was conducted to verify the Pommen findings and to investigate phosphorus releases from coal mines. Historical nitrogen and phosphorus data were reviewed from 1980-85 for the 5 surface coal mines in southeastern B.C. Specific data were collected from April 1985-March 1986 for two of these mines. Methods which can be used to speciate the inorganic nitrogen load according to ammonia, nitrite, and nitrate forms and to apportion loadings according to season are also presented.

Extensions to a computer program for performing engineering approach elastic-plastic fracture mechanics flow evaluations

by D.A. Scarth. Toronto : Ontario Hydro, Research Division, 1989. iii, 58 p. Bibliogr. (Report ; no. 88-290-K)
MICROLOG 89-04442 1 fiche

A computer program was written to perform elastic-plastic fracture mechanics (EPFM) flow evaluation based on the J-integral/tearing modulus engineering approach. The program, named EPFLAW, provides an efficient means to solve the nonlinear equations involved in EPFM flow evaluations. The only flaw model in the original version was a circular cylinder containing a 360 degree circumferential edge crack under tension. Version 2.0 included a 2-dimensional "infinitely long" axial flaw model, and a 3-dimensional semi-elliptical axial flaw model. Membrane and bending secondary stresses were also included in all the flaw models. This report gives an outline of the basic theory of the approach used in the computer program, the flaw evaluation procedures, and the validation cases. A user input description for the program is included.

Fabrication d'un fer à coller simple et bon marché

Ottawa : Musées nationaux du Canada. Institut canadien de conservation, 1988. 3 p. (Notes : 18/1) L'éd. anglaise (An Inexpensive and simple...) sur la même fiche. ISSN 0714-6221
MICROLOG 89-06246 1 fiche

Le fer à coller décrit dans ce document est fabriqué à partir d'un petit fer à souder de faible puissance relié à un régulateur rhéostatique. Il est facile à assembler, n'exige pas d'outils compliqués et ne coûte pas cher. Comme il fonctionne au moyen d'un thyristor, la régulation de la chaleur n'est pas aussi précise que s'il s'agissait d'un fer plus coûteux. Le document aborde aussi les pannes et l'étalonnage.

Factor analysis of pavement distresses for surface condition predictions

by J.J. Hajek and R.C.G. Haas. Downsview, Ont. : Ministry of Transportation, Research and Development Branch, 1986. iv, 23 p. Bibliogr.
MICROLOG 89-03215 1 fiche

Distress manifestations of pavement are defined as visible consequences of various mechanisms which usually lead to a reduction in pavement performance. At present, 15 distress manifestations are used to visually characterize pavement condition and to calculate the Distress Manifestation Index as a measure of pavement structural performance. This report describes the results of research on the possibility of identifying some fundamental categories of distress manifestations and thus simplifying the existing method of describing and analyzing pavement distresses.

Factors affecting cone and seed production in containerized interior spruce

by A.M. Colangeli, M.D. Dawkins and J.N. Owens. S.I. Forest Resource Development Agreement, 1989. 13 p. Bibliogr. (FRDA report : 058) ISSN 0835-0752 ISBN 0-662-16755-4
MICROLOG 89-04912 1 fiche

To help identify the possible causes of low seed set in containerized interior spruce, 2 studies were conducted aimed at 2 stages in the reproductive cycle. The first study was designed to observe and examine the effects of forcing on pollen development and fertilizing potential (prefertilization factors). The second study was to determine the effect of 3 different temperatures at pollination in cone abortion and final seed efficiency.

Factors affecting cone and seed production in western redcedar

by A.M. Colangeli, J.N. Owens and S.J. Morris. S.I. : Forest Resource Development Agreement, 1989. 32 p. : ill. Bibliogr. (FRDA report : 056) ISSN 0835-0752 ISBN 0-662-16754-6
MICROLOG 89-05046 1 fiche

Western redcedar is a commercially important conifer native to Alaska, B.C., and the Pacific Northwest States. In the natural state, it is a prolific producer of cones but a low producer of seed, the causes for which are not known. This low seed efficiency is unacceptable for seed orchards where the goal is maximum production of high quality seed. To investigate the reasons for inadequate pollination, low pollen vigour and viability, and cone, ovule and embryo abortion at various stages of the reproductive cycle, 3 studies were done. The first determined the role of the pollination mechanism and the effect of the time of pollination on pollination efficiency; the second determined the effect of self, cross and no pollination on cone and seed development; and the third determined the effect of open pollination and carrying capacity on seed yield.

Failure modes observed during river ice breakup

by T.D. Prowse and M.N. Demuth. Saskatoon, Sask. : Environment Canada, National Hydrology Research Institute, 1989. 5 p. : ill. Bibliogr. (NHRI contribution ; no. 89029)
Presented at the Eastern Snow Conference. ISSN 0838-1992
MICROLOG 89-05555 1 fiche

Breakup of ice-covered northern rivers is sometimes a highly damaging event. Largely because of the economic impact produced by flooding and ice damage, considerable research effort has been expended on trying to understand and model the breakup process, particularly through theoretical and laboratory studies. Researchers at the Institute and its predecessors have been studying breakup since the 1960s and have compiled unique and comprehensive sets of field observations. Based on these observations, this paper characterizes some of the typical ice-cover loading scenarios that lead to ice failure and subsequent breakup.

Family day care internationally : a literature review

by J. Branch. Toronto : Ministry of Community and Social Services, Child Care, 1988. v, 200 p. Bibliogr. ISBN 0-7729-4383-4
MICROLOG 89-01596 3 fiche

In many countries of the world there is a growing recognition that women providing the

shared or substitute care of young children in private homes are contributing an essential service and as governments are reviewing their public responsibility for child day care, a corollary concern to articulate policy in relation to family day care has been determined. This document researches family day care, which has been, until recently, traditionally an informal, neighbourhood or family phenomenon. Countries around the world are surveyed as to their informal structures and public policies as to the quality of care being provided, funding, organizational structures, the public responsibility for quality of care, and the professional and employment status of providers of family day care. A description of the International Family Child Care Conference in Wales (October 1987) is also provided.

Fate of polynuclear aromatic hydrocarbons in refinery waste applied to soil

Wastewater Technology Centre (Canada).
Ottawa : Petroleum Association for
Conservation of the Canadian Environment,
1988. 156 p. : ill. Bibliogr. (PACE report ;
no. 88-1)
MICROLOG 89-00338 2 fiche

This report describes a study regarding the fate and persistence of PAH's in soil that had been previously treated with refinery wastes. The first part was a laboratory study in which refinery waste additions were made to soil taken from a refinery landfarm and the concentrations of oil and grease and target PAH's were monitored with time. The target PAH's were as follows; naphthalene, acenaphthylene, acenaphthene, fluorene, phenanthrene, anthracene, fluoranthrene, pyrene, chrysene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, indeno(1,2,3-c,d)pyrene, dibenzo(a,h)anthracene and benzo(g,h,i)perylene. In the second part of the study, the concentrations of these same chemicals were monitored in soil and groundwater at three operating refinery landfarm sites. In Part 3, the fate of benzo(a)pyrene, naphthalene and anthracene were studied in detail using 14C-labelled compounds added to soil from a refinery landfarm site. Parts 1 and 2 required conventional extraction, cleanup and analysis of samples.

Feasibility of using ectomycorrhizal fungi to alleviate drought-related problems of containerized black spruce

by D. Boyle. Ottawa : ENFOR, 1988. 27 p.
Bibliogr. Contractor: Nova Scotia Research
Foundation Corporation. ENFOR project
P-338.
MICROLOG 89-04513 1 fiche

Mycorrhizal fungi can affect the water status of conifers, but it is not clear which species of fungi would be most effective at improving the performance of drought-stressed trees under field conditions. Direct field testing of large numbers of tree-fungus combinations is not feasible since, as yet, it is only possible to produce mycorrhizae under nursery conditions with a few fungal species. This report presents the results of a project to determine whether controlled environment (laboratory or microplot) screening of candidate mycorrhizal species for attributes suspected to relate to drought tolerance could be used to choose mycorrhizal species adapted for use on drought-stressed field sites.

Feasibility study for a field sampling program to monitor impacts resulting from in-situ heavy oil subsurface disposal practices

prepared for Conservation and Protection,
Environment Canada ; by Intera Technologies
Ltd. Ottawa : Environment Canada,
Conservation and Protection, 1987. xv,
366 p. : ill. Bibliogr.
MICROLOG 89-01362 5 fiche

Evaluation of the feasibility of a field sampling program to monitor impacts resulting from waste fluid injection in deep sedimentary formations in the oil sands and heavy oil areas of the Cold Lake area of Alberta. The assessment was based on review of existing hydrogeological data and theoretical calculations for each injection horizon using available data. The field sampling program was designed using a hydrostratigraphic unit evaluation in conjunction with constraint mapping for siting

wells to assess background conditions and to monitor the impact of waste injection, and by a detailed review of field testing methodologies. Potential horizons evaluated using constraint mapping include the Mannville Group, the Cooking Lake-Beaverhill-Watt Mountain Group, and the Cambrian/Granite Wash. Field sampling programs developed included a monitoring program and a limited testing program in existing wells, and a full scale testing program in a newly drilled well.

Feasibility study for direct utilization of geothermal energy resources at Summerland, B.C.

Nevin Sadler-Brown Goodbrand Ltd. Ottawa :
Energy, Mines and Resources Canada,
Renewable Energy Branch, 1987. xv, 85 p. :
ill. Bibliogr.
MICROLOG 89-05640 2 fiche

Because of its unique geological setting, Summerland, a rural community situated on the west bank of Okanagan Lake in B.C.'s southern interior, appears to be a good candidate for development and application of low temperature geothermal resources. This study arises from the necessity of determining the economic viability of continued geothermal exploration, and provides the basis for a decision regarding the initiation of a geothermal demonstration heating project. The report assesses geothermal resource characteristics, identifies potential application sites, presents a design for a preliminary geothermal heating system, and gives the results of an economic analysis comparing geothermal and conventional or existing heating systems. The report also explores general applications, as well as greenhouse and building applications.

Feasibility study of full scale iceberg impact tests

by D. Duthinh...et al. Ottawa : Public Works
Canada, Architectural and Engineering
Services, 1988. xii, 115 p. : ill., maps.
Bibliogr. ISBN 0-662-16559-4
MICROLOG 89-01822 2 fiche

Study to establish the feasibility of full scale iceberg impact experiments, leading to increased understanding and prediction ability of the impact of icebergs on offshore structures. The report identifies 21 possible locations along the coast of Newfoundland and Labrador and selects one which meets the required criteria. Hydraulic model tests were used to determine the most practical and efficient method of conducting the experiment while ensuring iceberg impact on the target area. Various towing/winch configurations were tested while simulating alongshore ocean currents. The report also discusses the phenomena that should be monitored, and instrumentation requirements. The predicted cost of such a project is broken down into various project phases, with rough cost estimations being made.

A Feasibility study of residential intensification in single-industry towns : a case study of Hemlo

by J. Stafford and B. McMillan. Ottawa : Canada Mortgage and Housing Corporation, 1987. 153 p. : ill. Bibliogr.
MICROLOG 89-00071 2 fiche

Life-cycles of single-industry/resource-based communities typically progress from "boom" periods of rapid industrial expansion and population growth to "bust" periods of sudden industrial contraction and de-population. The often violent fluctuations in population pose special problems for these communities, in particular, housing problems. This study examines the flexibility of intensifying the existing stock of housing and serviced land in residential subdivisions in two northwestern Ontario resource towns currently experiencing rapid population development related to the Hemlo goldfield expansions.

Federal and provincial taxation of the Canadian mining industry : impact and implications for reform

by R.W. Boadway, K.J. McKenzie and J.M. Mintz. Kingston, Ont. : Queen's University, Centre for Resource Studies, 1989. x, 197 p. Bibliogr. (Monographs ; 24) ISBN 0-88757-097-6
MICROLOG 89-06061 3 fiche (Available on fiche only)

The taxation of natural resources extraction industries has a major influence on their economic viability, on the efficiency of allocation of capital, and the net benefits to society generated by the existence of the resources. This study investigates how the existing system of income taxation and provincial mining taxation impinges upon the incentives to invest in mining at all stages from initial exploration to final depletion and sale, using the concept of an effective tax rate. The study also investigates what sort of reforms would improve the system, satisfying government revenue requirements while at the same time removing the adverse effects of the existing system on the industry.

Feeder calf prices by breed cross and break-even feeder calf pricing

by E.G. Smith and G.W. Rahnefeld. Ottawa Agriculture Canada, Research Branch, 1988. iv, 10 p. (Technical bulletin ; 1988-10E) French ed. (Prix des veaux...) on the same fiche. ISBN 0-662-16469-5
MICROLOG 89-02065 1 fiche

The price for feeder calves in western Canada tends to be higher for some breed crosses than for others, with the existence of a premium or discounted price having a major impact on the returns to the cow-calf producer. This study analyzed the profitability of finishing specific breed cross steers to determine whether feeder calf price differences by breed cross of the calf are based on their predictability. The study used three-breed cross steers produced by mating Charolais, Simmental, Limousin, and Chianina terminal sires to first-cross dams of Hereford-Angus and 9 dam types produced by mating Charolais, Simmental, and Limousin sires to Hereford, Angus, and Shorthorn cows. The cows were maintained and the calves raised at Brandon, Manitoba.

Fergus TS : power frequency grounding studies

by R.P. Pillai. Toronto Ontario Hydro, Research Division, 1989. 13 p. Bibliogr. (Report ; no. 89-192-K)
MICROLOG 89-06328 1 fiche

Fergus Transformer Station is an existing 230-kV station supplying loads to farm houses, with a microwave tower located about 150 m northwest of the station. Problems were experienced at the station during thunder storms when lightning strikes in the vicinity of the microwave tower caused protective gap flashovers and equipment damage on control wiring between the microwave building and the station. The flashover was thought to be caused by inadequate grounding or cable shielding, therefore a new ground grid was installed between the station main ground grid and the microwave area. A series of tests was conducted before and after the installation to investigate and evaluate the transient performance of the ground grid. Power frequency tests under simulated fault conditions were conducted at the station after the installation to confirm the adequacy of the grounding system performance for public safety, station security, and protection of telecommunications equipment. This report covers the power frequency performance of the grounding system.

Field measurements using thematic mapper data in the Swift Current area, Saskatchewan

by S.F. Benjamin. Saskatoon, Sask. : Saskatchewan Research Council, 1987. iv, 9 p. : ill. (SRC technical report ; no. 201) (SRC publication ; no. E-905-28-B-87) At head of title: *Saskatchewan Technology Enhancement Program*. MICROLOG 89-02431 1 fiche

The Saskatchewan Crop Insurance Corporation offers protection against loss of crop due to natural hazards. In the past, aerial photographs were used to estimate acreages of fields that were difficult to measure. However, aerial photographs are not taken annually, and boundaries change, leading to discrepancies between boundaries in the year of cultivation and the year of photography. If a yearly data base of field boundaries by quarter section could be established, then measuring fields by ground survey could be eliminated or greatly reduced. Measurements would have to be 95% accurate and the photographs must be taken between July 15 and August 2. This report presents the results of a project to confirm the feasibility and cost effectiveness of using satellite data to measure field sizes. A method was developed using Swift Current data and then applied to the data from Qu'Appelle lakes area. Two thematic mapper images from July 1984 were used for the visual and digital analysis of the data.

Les Filières d'action sociale : les rapports entre les services sociaux publics et les pratiques communautaires

par J. Lamoureux et F. Lesemann. Québec : Commission d'enquête sur les services de santé et les services sociaux, 1987. viii, 250 p. Bibliogr. (Recherche ; 24) ISBN 2-551-08470-9 MICROLOG 89-00901 3 fiche

La question de l'interface des services publics et des ressources communautaires est aujourd'hui débattue dans tous les pays qui ont connu un important développement des formes d'intervention d'État-providence. Ce rapport expose les débats relatifs à la gestion du social dans le cadre d'une interrogation en profondeur sur l'intervention de l'État; analyse

les discours éatiques et positionne les principaux acteurs; traite de la synthèse et de la systématisation des témoignages qui constituent l'armature de la recherche; et dégage les enjeux socio-politiques des rapports entre les services sociaux publics et les pratiques communautaires.

Final report for the development of a CANMET sulfur-form analyzer

Barringer Research Ltd. Rexdale, Ont. Barringer Research Ltd., 1989. 162 p. : ill. *Operating manual (14 p.) laid in.* CANMET contract: 59219-01-SQ
MICROLOG 89-04527 2 fiche

This paper describes the hardware and software, the analytical system operation, and analytical methods of a system consisting of a Leco SC-132 sulfur analyzer and a Compaq microcomputer. A second report describes an investigation into a methodology related to sulfur form analysis in coal by differential thermal analysis. A commercially available total sulfur analyzer was modified to measure thermal decomposition/oxidation of sulfur containing compounds in coal as a function of time. Variables associated with the kinetics of oxidation and dissociation of the different form of sulfur in coals and the instrumental parameters associated with combustion and analysis were investigated.

Final report on the monitoring and optimization of the anaerobic digestion of whey at Millbank Cheese and Butter Ltd.

prepared for Bioenergy Development Program, Renewable Energy Branch, Energy, Mines and Resources Canada, by Canviro Consultants ; on behalf of J.M. Schneider Inc. Waterloo, Ont. : Canviro Consultants, 1987. xiii, 146 p. : ill. Bibliogr.
MICROLOG 89-05610 2 fiche

Description of a project to optimize the operation of the full-scale anaerobic digestion and energy recovery facility at Millbank, Ontario. This facility was designed to treat whey and generate a methane rich fuel for utilization in a cheese plant boiler. From the time the construction was completed in July 1984 to the summer of 1985, it was never possible to achieve stable digester operation, or to attain the design loading or hydraulic retention time. Seven lab-scale reactors were set up on-site in a mobile environmental trailer, and were fed whey and various nutrient/buffer supplements to develop operating parameters that would allow the full-scale digester to achieve stable operation. The reactors and the full-scale facility were monitored daily.

The Fiscal Plan : controlling the public debt

by M.H. Wilson. Ottawa : Dept. of Finance,
1989. v, 147, v, 147 p. : ill. *Bilingual (Le
Plan financier...): Bilingual summary (7, 7 p.)
laid in.*
MICROLOG 89-03548 4 fiche

The principal objective of the fiscal strategy
presented in this budget is to reduce the
growth of debt through deficit reduction. It
sets out the fiscal record of the government
since 1984-85 and the fiscal impact of higher
interest rates since the February 1988 budget.
It also reviews the benefits of pursuing debt
control as the principal fiscal objective of the
government and summarizes the further
progress that will be made as a result of the
measures taken in this budget and in previous
budgets. In addition, it summarizes the
expenditure and revenue measures introduced
in this budget. Next, it sets out the
government's short-term fiscal outlook for 1989-

90 and 1990-91 and highlights changes in the
projections since the February 1988 budget.
This is followed by a discussion of the medium-
term fiscal projections.

MICROLOG 89-04674 1 fiche

At a workshop on the post-operational
environmental monitoring program for Pickering
Nuclear Generating Station B conducted in
1985, several hypotheses concerning the effects
of the thermal discharges on fish populations
were formulated. This study is part of the
2nd year of a 3-year aquatic study initiated in
1986, and was to determine if gizzard shad,
walleye, and smallmouth bass resided in the
thermal plume during the winter, how abundant
they were, and whether they spawned there.
Observations of fish resident within the
discharge channel were obtained by scuba-
equipped divers from January through July
swimming along the sides of the channel during
the daytime. Mean daily intake and outfall
temperatures were obtained. To determine
spawning, gill nets were set weekly from late
March through late April. Smallmouth bass
were captured underwater by divers and
tagged with Floy tags from April 30-June 1.

Fish habitat improvement in the Valleyfield River, P.E.I., 1988 : biological, chemical and physical aspects

by A. Vromans and D. Caissie. Moncton,
N.B. : Dept. of Fisheries and Oceans, Gulf
Region, Science Branch, 1989. vii, 47 p. : ill.
Bibliogr. (Canadian data report of fisheries
and aquatic sciences ; no. 740) ISSN 0706-
6465
MICROLOG 89-03837 1 fiche

The project consisted of installing 6 fish habitat
improvement devices (1 low head barrier, 4
single deflectors, and 1 double deflector) in a
stream reach of approximately 200 meters. A
control section of approximately 100 meters
was also studied upstream of the first device.
Biological data, including fish and invertebrate
populations, and physical data, including stream
gradient, streambed profiles, silt load and water
velocity and discharge, were collected before
the installation of the devices and following the
installation to monitor short term changes. A
complete water chemistry analysis was
performed on a single sample. Dissolved
oxygen levels (ppm), pH, and specific
conductance (umho) were measured on 3
additional dates.
